Contents

1 Introduction to Interrelated Biology of Age-Associated Chronic Diseases and Cancer: Chronic Inflammation, a Common Denominator in Morbidity and Mortality ........................................ 1
  1 Introduction ......................................................................................... 2
  2 Neglected Historical Observations, Theories and Discoveries on the Role of Immunity in Controlling Carcinogenesis .......................... 5
    2.1 Observations by Paul Ehrlich and Ilya Mechinkov in Nineteenth and Twentieth Centuries: Era of Modern Experimental Immunology ...................................................... 7
    2.2 Contributions of Peyton Rous in 1900s: Era of Tumor Virology. Virus-Causing Cancers ............................. 7
    2.3 Burnet (1957): Insightful Theory of Immune Surveillance-Controlling Cancer Cells ..................................... 8
    2.4 Biological Cascades Toward Cancer Metastasis: Extension of the Theory of ‘Seed and Soil’ by Paget (1889) ............................................................. 13
    2.5 Contribution of Dvorak (1986): ‘Tumors Are Wounds that Do Not Heal’ ....................................................... 13
    2.6 ‘Accidental’ Discoveries: Systematic Studies Led to First Evidence on Direct Link Between Inflammation and Tumorigenesis (Khatami et al. 1980s) .............................. 14
  3 Why War on Cancer Will Not End: False Foundation and Visionless/Reductionist Approaches to Cancer Research and Therapy as Bases for Extremely Slow Progress and Financial Toxicity to Society. Might of Power Over Right of Science! ................................................................................. 18
  4 Answer to Cancer: A Case for Inflammation as Common Denominator in Induction of Nearly All Age-Associated Chronic Diseases and Site-Specific Cancers ......................................... 20
5 Assessing Claimed ‘Targeted’ Therapies, ‘Personalized’
or ‘Precision’ Medicine for Solid Tumors .......................... 23
6 Heavy Economic Burden to Society on Falsely
Designed Clinical Trials that Repeatedly Failed:
Cancer Financial Toxicity ..................................................... 26
7 Challenges in Conducting Effective Research
and Clinical Trials for Cancer .............................................. 27
8 Concluding Remarks and Proposed Future Directions:
Maintenance of Immune Surveillance Key to Healthy Aging .... 28
References .................................................................................. 31

2 Immune Surveillance in Health and Diseases
of Aging: Definitions of Acute and Chronic
Inflammation [Yin and Yang] ...................................................... 37
1 Introduction ............................................................................. 38
2 Acute Inflammation: Division of Labor in Programmed
Cell Death. Protective, Self-Terminating Property
of Immune Surveillance. Balancing Growth-Arrest
(Yin) and Growth-Promote (Yang) Arms of Immunity .......... 41
  2.1 Yin Phenomenon: Pro-inflammatory or Initiation
      Stage: Apoptosis, Program Cell Death, Growth-
      Arresting or Tumoricidal [DRESSED TO KILL!] ............. 43
  2.2 Yang Phenomenon: Post-inflammatory or Termination/
      Resolution of Acute Inflammation (Wound Healing,
      Growth-Promoting, Tissue Repair, Tumorigenic).
      Host Revival! ................................................................. 45
  2.3 Contribution of Non-immune Systems in Acute
      Inflammation in Balancing Yin-Yang ............................ 47
  2.4 Mission and Outcomes of Acute Inflammation
      (Yin-Yang) or Effective Immunity (Immune Surveillance) .. 52
3 Sequence of Events in Immediate Hypersensitivity Reactions ... 53
4 Molecular Mechanisms of Acute Inflammation ...................... 54
5 Interrelated Cell Death Categories ......................................... 55
6 Chronic Inflammation: ‘Immunological Chaos’ in Host
      Tissue and Initiation of Disease Process. Not All Immune
      Disruptors Created Equal! .................................................. 58
7 Stem Cells; Shared or Special Features in Innate
      and Adaptive Immune Cell Responses in Health
      and Age-Associated Chronic Diseases or Cancer ............. 59
8 Differential Influence of Acute and Chronic Inflammation
      in Immune-Privileged and Immune-Responsive Tissues
      and Chronic Diseases ....................................................... 61
  8.1 Immune Surveillance (Protection) in Immune-Responsive
       Tissues ........................................................................ 62
  8.2 Immune Protection (Tolerance) in Immune-Privileged
       Tissues ........................................................................ 62
### Contents

9 Clinical and Immunological Features of Immune Deficiencies .......... 67  
10 Challenges in Understanding Dynamics of Immune Responses and Inflammation ................................................................. 75  
11 Concluding Remarks ........................................................................... 76  
References ................................................................................................... 78  

3 Theories of Aging and Chronic Diseases: Chronic Inflammation an Interdependent ‘Roadmap’ to Age-Associated Illnesses .......... 91  
1 Introduction ......................................................................................... 92  
2 Principals in Biology of Aging Process .............................................. 95  
3 Biological Theories of Aging: Search for Common Link ................. 98  
4 Free Radical Concept and Oxidative Stress Theory of Aging: Role of Mitochondria ................................................................. 100  
5 Genomic Theory of Aging ................................................................. 104  
5.1 Role of Hyperactivation of Suppressor Gene Pathways in Aging .......... 106  
6 Immunosenescence Theory: Connecting the Dots with Oxidative Stress and Skewed Dynamics of Immunity in Aging ................................................................. 107  
6.1 Immune Competency in Aging: Role of Antigen Presenting Cells (APCs) in Immunosenescence .......... 108  
6.2 Multipotent Hematopoietic Stem Cells ....................................... 109  
6.3 Cytokine/Chemokine Dynamics: Role of Decoy Receptors in Control of Acute or Chronic Inflammation in Health and Diseases ................................................................. 112  
6.4 Role of Natural Killer Cells in Aging: Skewed Cytotoxicity .......... 115  
6.5 T Cell Immunity in Aging ............................................................. 116  
6.6 B Cells and Lymphoid Organ Function in Aging ..................... 118  
6.7 Germinal Center Dynamics: Antibody-Forming and Memory Cells ................................................................. 119  
6.8 Role of Neutrophils in Remodeling Extracellular Matrix and Angiogenesis ................................................................. 120  
6.9 Mast Cells: Innate Immune Cells Possessing Effector Cell Properties ........................................................................ 121  
6.10 Function of Dendritic Cells in Immunity and Aging .............. 125  
6.11 Role of Macrophages in Acute and Chronic Inflammation and Aging ................................................................. 127  
7 Cytobiology of Vasculature, Platelets and Complement in Acute or Chronic Inflammatory Diseases ................................................................. 132  
7.1 Platelets Contributions in Immunity: Shared Features with Innate Immune Cells ................................................................. 136  
7.2 Nitric Oxide in Inflammation and Aging ........................................ 137
8 Autophagy and Mitophagy in Inflammation and Aging ............... 139
9 Hormonal, Metabolic and Lipid Adaptations-Rearrangements in Aging .............................................................................. 141
  9.1 Inflammation-Induced Sarcopenia or Cachexia in Aging........ 142
  9.2 Fatty Acid (Lipid) Biology in Inflammation and Aging .......... 143
10 Concluding Remarks.................................................................. 144
11 Author’s Personal Note......................................................... 145
References .................................................................................. 146

4 THE EYES HAVE IT ALL! ................................................................. 175
1 Introduction............................................................................. 176
2 Definitions of Acute and Chronic Inflammation in Health and Diseases ........................................................................... 178
3 Immune Disruptors-Induced Interactions and Synergies between Local and Recruiting Cells Toward Multistep Tumorigenesis .......................................................... 181
4 ‘Accidental’ Series of Discoveries in Ocular Tissues: Implications for Direct Link Between Inflammation and Multistep Tumorigenesis and Angiogenesis in Conjunctival-Associated Lymphoid Tissues (CALTs) .......... 183
  4.1 Background Information on Author’s Personal Experience .............. 184
5 Ocular Tissues: Ideal Targets for Studying Inflammatory Diseases or Tumorigenesis and Angiogenesis. Comparison of Composition and Function of Immune and Non-immune Cells in Conjunctiva and Lung Airways ........................................ 186
6 Time-Course Kinetics of Inflammation-Induced Immune Dysfunction and Tumorigenesis in Conjunctival Associated Lymphoid Tissues (CALTS) ........................................... 187
  6.1 Acute Phase (a): Mast Cell (Effector) Response Toward Immune Disruptor ................................................................. 188
  6.2 Intermediate Phase (Stage b): Down-Regulation Phenomenon ................................................................................ 189
  6.3 Chronic Response (Phase c): Induction of Massive Hyperplasia in CALTs ................................................................. 190
  6.4 Antibody Profiles ................................................................ 192
  6.5 Role of Mucus Secreting Goblet Cells in CALTs........................ 192
  6.6 Statistical Analyses .............................................................. 193
  6.7 Sequential Interactions and Synergies Between Resident MCs and Mucus Secreting GCs and Recruiting Eos and MΦs Toward Multistep Tumorigenesis .............................. 193
  6.8 Discussion: Direct Role of Inflammation in Multistep Tumorigenesis ........................................................................... 195
  6.9 Significance of ‘Accidental’ Discoveries and Systematic Identification of Stages of Immune Dysfunction in Multistep Tumorigenesis and Angiogenesis ...................... 197
7 Addressing Additional Major Knowledge Gaps in Cancer Biology .......................................................... 202
8 Types of Allergies and Immune Disorders: Rational for Promotion of Balance Between Yin (Tumoricidal) and Yang (Tumorigenic) Pathways in Immunity for Prevention of Chronic Diseases ........................................... 204
9 Conclusions and Perspectives ............................................................. 205
References................................................................................................... 206

5 Cancer Statistics and Concerns for Safety of Drugs or Vaccines: Increased Population of Drug-Dependent Sick Society! ....................... 213
1 Introduction............................................................................................. 214
2 Statistical and Epidemiologic Data on Disease Mortality and Morbidity Around the World: Why Americans Health Rank Last? .................................................................................. 215
  2.1 Anatomy of a Sick Care Nation (America): Power of Advertisement-Creation of ‘Magical Reality’ Culture for Selling Drugs and Unhealthy Food Products ...... 217
3 Cancer Global Burden: Statistics on Incidence and Mortality .......... 218
4 Statistical Definitions for Cancer Mortality and Morbidity .......... 220
5 Results and Analyses of Cancer-Related Statistics on Incidence, Mortality and Morbidity ............................................... 223
6 Cancer Risk Factors: Impact of Aging Process, Chronic Infections, Pathogen-Specific Vaccines, Carcinogens and Chemicals .................................................................................. 238
7 Misrepresented Information and Knowledge Gaps on Cancer Triggers: Viral Oncogene Sub-structures in Vaccines and Sharp Increase in Cancer Incidence or Chronic Neurodegenerative and Autoimmune Diseases .......... 243
8 Challenges in Formulation of Accurate Risk Assessment: Immune Disruptor-(Antigen)-Induced Chronic Inflammation as Precancerous State of Tissues ...................................................... 246
9 Proposed Future Directions: Risk Reduction and Control of Cancer .................................................................................. 247
10 Author’s Final Comments on Future Perspectives ....................... 249
References................................................................................................... 250

6 Cancer Biology: Severe Cumulative Delayed Type Hypersensitivity Reactions ...................................................... 261
1 Introduction............................................................................................. 262
2 Highlights of Two Centuries of Cancer Research and Therapies: Neglected Common Sense on Fundamental Observations and Discoveries ...................................................... 264
3 Forgotten Common Sense to Systematically Study Cancer Science: Bases for Lack of Progress in Therapy or Prevention ........ 269
American Tragedy of 1955s: Virus-Contaminated Polio Vaccines and Sharp Increase in Cancer Incidence and Mortality and Other Chronic Inflammatory Diseases in Baby Boomer Generation: A Sick Drug-Dependent Society .......... 271

Hypersensitivity Reactions or Biological Terrorists: Tissue-Specific Immune Disorders or Cancers ......................... 275

Immune Disorders: Common Denominators of ‘Mild’, ‘Moderate’ or ‘Severe’ Hypersensitivity Responses: Cancer a ‘Severe’ Cumulative Altered Immune Responses that Destroy Architectural Integrity of Tissue .................................... 281

Histamine a Blue Print? [An Idea Who’s Time Has Come!] ..................................................................... 281

Interdependent Categories in Age-Associated Chronic Diseases ............................................................ 283

Metabolism and Function of Histamine (Catecholamine) in Acute and Chronic Inflammatory Diseases ...................... 284

Spectrum of Anaphylaxis and Inflammatory Diseases: When Beneficial Biphasic Yin and Yang of Immunity becomes Health Hazards ................................................................................. 285

Allergies and Induction of Diverse Diseases and Cancer ...... 287

The Many Faces of Histamine: Friend and Foe! ......................... 288

Biological Gaps: Connecting Dots on Diverse Function of Histamine Under Oxidative Stress and Aging Process ...... 293

Energy-Requiring Activation of Immune Cells in Health or Immune Disorders: Role of Mitochondrial Oxidative Phosphorylation and Autophagy ................................................................. 294

Bioenergetics of Mast Cell Exocytosis, Secretory Lysosomes and Ca$^{2+}$ Fluxes in Acute and Chronic Inflammation ......................... 296

Histamine Influence on Tissue Physiology and Function .......... 298

Oxidative Stress and Low Level Circulating Histamine: Preparing Host for Induction of Tumorigenesis? ................. 300

Asthma: Intermediate Inflammatory Responses: Increased Risk of Cancer .......................................................... 301

Mediators of Late Phase Hypersensitivity Responses ............ 302

Pattern Recognition Receptors (PRRs) in Biological Events: Constituent (Innate) and Induced (‘Designer’). Crucial Roles in Circadian Rhythms and Immunity ................................. 304

Constituent: Innate and Adoptive Receptors and Surface Molecules .............................................................. 305

Induced or Transient Receptors and Surface Molecules: ‘Designer’ Molecules ......................................................... 305
13.3 Pattern Recognition Receptors (PRRs) in Health and Immune Disorders: Toll-like Receptors (TLRs) and Inhibitors: Role in Multistep Carcinogenesis .......... 306
13.4 Pattern Recognition for Regulation (Tolerance) of Inflammation by IRAK-M: Special Features of Yin-Yang Events? ........................................... 307

14 Regulatory Signaling Mechanisms of Soluble Hormones and Tumor Factors in Immune Tolerance: Role of IRAK-M in Violations of Biological Laws and Tumorigenesis! .......... 309
14.1 Receptor Recognition and Function in Autoimmune Diseases ................................................................. 312

15 Energy-Dependent Differential Role of Mitochondria in Maintenance of Yin and Yang Balance: mTOR/PI3K/AKT Complexes in Health or Immune Disorders and Cancer .......... 313
15.1 Mechanisms of mTOR-Kinase Complexes in Metabolism, Hormonal Regulation, Cell Growth and Immunity .......... 314
15.2 Role of mTOR in Metabolism and Immunity of Adipose Tissue (an Endocrine Organ) .................................. 315
15.3 Bioenergetics of Chromatin Complexes: Remodeling of Nucleosome .................................................................................. 318
15.4 Inflammation-Hypothalamus-Adrenal Axis: Interdependent Acute Phase Response (APR) and Systemic Response .............................................................. 319
15.5 Inflammation- Hepatic Axis in Acute Phase Response (APR) .................................................................................. 320
15.6 Mitochondria and Immune Dysfunction: Activation of Oncogenes ................................................................. 321

16 Bird’s Eye View of Intrinsic (Innate) and Induced (Adaptive) Response Profiles in Initiation of ‘Mild’, ‘Moderate’ and ‘Severe’ Immune Disorders and Tumorigenesis: Differential Bioenergetics Requirement in Yin and Yang Events .......... 323

17 Is Cancer a Severe Late Hypersensitivity Reaction (Immune Tsunami) That Destroys Host Tissue for Immortal Life? The Precious Truth! .................................................. 325
17.1 Cancer-Induced Oxidative Stress: Dysfunction of Genomic, Immune Response and Metabolism in Tissue ........ 326
17.2 Tumor Lysis Syndrome and Tissue Metabolism .................................................................................. 328

18 Bioenergetics of Host-Immune Dynamics: Contribution of Mitochondria and Oxidative Metabolism .................................................................................. 329
18.1 Differential and Parallel Bioenergetics Requirements of Mitochondria and Immune-Surveillance from Fetus Growth, and throughout Life: Features of ‘Mild’, ‘Moderate’ and ‘Severe’ Immunological Disorders and Cancer .................................................. 329
18.2 Bases for Repeated Failed Cancer Therapeutics: Ignoring Nature of Compensating Biological Events! .......... 331
Inflammation, Aging and Cancer
Biological Injustices to Molecular Village of Immunity that Guard Health
Khatami, M.
2017, XVI, 389 p. 57 illus., 52 illus. in color., Hardcover
ISBN: 978-3-319-66473-6
