## Contents

1 Introduction to Interrelated Biology of Age-Associated Chronic Diseases and Cancer: Chronic Inflammation, a Common Denominator in Morbidity and Mortality ................. 1

1 Introduction ........................................................................................................ 2

2 Neglected Historical Observations, Theories and Discoveries on the Role of Immunity in Controlling Carcinogenesis ......................... 5

2.1 Observations by Paul Ehrlich and Ilya Mechinkov in Nineteenth and Twentieth Centuries: Era of Modern Experimental Immunology ........................................... 7

2.2 Contributions of Peyton Rous in 1900s: Era of Tumor Virology. Virus-Causing Cancers ......................... 7

2.3 Burnet (1957): Insightful Theory of Immune Surveillance-Controlling Cancer Cells ........................................... 8

2.4 Biological Cascades Toward Cancer Metastasis: Extension of the Theory of ‘Seed and Soil’ by Paget (1889) ................................................................. 13

2.5 Contribution of Dvorak (1986): ‘Tumors Are Wounds that Do Not Heal’ ................................................................. 13

2.6 ‘Accidental’ Discoveries: Systematic Studies Led to First Evidence on Direct Link Between Inflammation and Tumorigenesis (Khatami et al. 1980s) ................. 14

3 Why War on Cancer Will Not End: False Foundation and Visionless/Reductionist Approaches to Cancer Research and Therapy as Bases for Extremely Slow Progress and Financial Toxicity to Society. Might of Power Over Right of Science! ......................................................................................... 18

4 Answer to Cancer: A Case for Inflammation as Common Denominator in Induction of Nearly All Age-Associated Chronic Diseases and Site-Specific Cancers ........................................... 20
9 Clinical and Immunological Features of Immune Deficiencies
10 Challenges in Understanding Dynamics of Immune Responses
and Inflammation
11 Concluding Remarks
References

3 Theories of Aging and Chronic Diseases: Chronic Inflammation
an Interdependent ‘Roadmap’ to Age-Associated Illnesses
1 Introduction
2 Principals in Biology of Aging Process
3 Biological Theories of Aging: Search for Common Link
4 Free Radical Concept and Oxidative Stress Theory of Aging:
   Role of Mitochondria
5 Genomic Theory of Aging
6 Immunosenescence Theory: Connecting the Dots with
   Oxidative Stress and Skewed Dynamics of Immunity
   in Aging
7 Cytobiology of Vasculature, Platelets and Complement
   in Acute or Chronic Inflammatory Diseases

6.1 Immune Competency in Aging: Role of Antigen Presenting Cells (APCs) in Immunosenescence
6.2 Multipotent Hematopoietic Stem Cells
6.3 Cytokine/Chemokine Dynamics: Role of Decoy Receptors in Control of Acute or Chronic Inflammation in Health and Diseases
6.4 Role of Natural Killer Cells in Aging: Skewed Cytotoxicity
6.5 T Cell Immunity in Aging
6.6 B Cells and Lymphoid Organ Function in Aging
6.7 Germinal Center Dynamics: Antibody-Forming and Memory Cells
6.8 Role of Neutrophils in Remodeling Extracellular Matrix and Angiogenesis
6.9 Mast Cells: Innate Immune Cells Possessing Effector Cell Properties
6.10 Function of Dendritic Cells in Immunity and Aging
6.11 Role of Macrophages in Acute and Chronic Inflammation and Aging
6.12 Inefficiency of Immune System to Overcome New Challenges in Aging. A Cycle of Skewed Response Dynamics in Immune and Non-immune Systems

7 Cytobiology of Vasculature, Platelets and Complement in Acute or Chronic Inflammatory Diseases
7.1 Platelets Contributions in Immunity: Shared Features with Innate Immune Cells
7.2 Nitric Oxide in Inflammation and Aging
8 Autophagy and Mitophagy in Inflammation and Aging ......................... 139
9 Hormonal, Metabolic and Lipid Adaptations-Rearrangements in Aging ........................................................................................................ 141
  9.1 Inflammation-Induced Sarcopenia or Cachexia in Aging.............. 142
  9.2 Fatty Acid (Lipid) Biology in Inflammation and Aging ............ 143
10 Concluding Remarks........................................................................... 144
11 Author’s Personal Note ....................................................................... 145
References................................................................................................... 146

4 THE EYES HAVE IT ALL!................................................................. 175
  1 Introduction....................................................................................... 176
  2 Definitions of Acute and Chronic Inflammation in Health and Diseases.................................................................................................. 178
  3 Immune Disruptors-Induced Interactions and Synergies between Local and Recruiting Cells Toward Multistep Tumorigenesis ................................................................. 181
  4 ‘Accidental’ Series of Discoveries in Ocular Tissues: Implications for Direct Link Between Inflammation and Multistep Tumorigenesis and Angiogenesis in Conjunctival-Associated Lymphoid Tissues (CALTs) .................. 183
     4.1 Background Information on Author’s Personal Experience ................................................................. 184
  5 Ocular Tissues: Ideal Targets for Studying Inflammatory Diseases or Tumorigenesis and Angiogenesis. Comparison of Composition and Function of Immune and Non-immune Cells in Conjunctiva and Lung Airways ............................................... 186
  6 Time-Course Kinetics of Inflammation-Induced Immune Dysfunction and Tumorigenesis in Conjunctival Associated Lymphoid Tissues (CALTs) ................................................................. 187
     6.1 Acute Phase (a): Mast Cell (Effector) Response Toward Immune Disruptor ................................................................. 188
     6.2 Intermediate Phase (Stage b): Down-Regulation Phenomenon ............................................................................ 189
     6.3 Chronic Response (Phase c): Induction of Massive Hyperplasia in CALTs ................................................................. 190
     6.4 Antibody Profiles....................................................................... 192
     6.5 Role of Mucus Secreting Goblet Cells in CALTs ....................... 192
     6.6 Statistical Analyses .................................................................. 193
     6.7 Sequential Interactions and Synergies Between Resident MCs and Mucus Secreting GCs and Recruiting Eos and MΦs Toward Multistep Tumorigenesis ......................................................... 193
     6.8 Discussion: Direct Role of Inflammation in Multistep Tumorigenesis..................................................................................... 195
     6.9 Significance of ‘Accidental’ Discoveries and Systematic Identification of Stages of Immune Dysfunction in Multistep Tumorigenesis and Angiogenesis ........................................ 197

5 Cancer Statistics and Concerns for Safety of Drugs or Vaccines:
Increased Population of Drug-Dependent Sick Society! .................. 213
1 Introduction................................................................................. 214
2 Statistical and Epidemiologic Data on Disease Mortality
and Morbidity Around the World: Why Americans
Health Rank Last?......................................................................... 215
  2.1 Anatomy of a Sick Care Nation (America): Power
of Advertisement-Creation of ‘Magical Reality’
Culture for Selling Drugs and Unhealthy Food Products ...... 217
3 Cancer Global Burden: Statistics on Incidence and Mortality......... 218
4 Statistical Definitions for Cancer Mortality and Morbidity........... 220
5 Results and Analyses of Cancer-Related Statistics
on Incidence, Mortality and Morbidity.......................................... 223
6 Cancer Risk Factors: Impact of Aging Process,
Chronic Infections, Pathogen-Specific Vaccines,
Carcinogens and Chemicals........................................................... 238
7 Misrepresented Information and Knowledge Gaps
on Cancer Triggers: Viral Oncogene Sub-structures
in Vaccines and Sharp Increase in Cancer Incidence
or Chronic Neurodegenerative and Autoimmune Diseases .......... 243
8 Challenges in Formulation of Accurate Risk Assessment:
Immune Disruptor-(Antigen)-Induced Chronic Inflammation
as Precancerous State of Tissues.................................................... 246
9 Proposed Future Directions: Risk Reduction and
Control of Cancer........................................................................ 247
10 Author’s Final Comments on Future Perspectives .................... 249
References..................................................................................... 250

6 Cancer Biology: Severe Cumulative Delayed Type
Hypersensitivity Reactions.............................................................. 261
1 Introduction............................................................................... 262
2 Highlights of Two Centuries of Cancer Research
and Therapies: Neglected Common Sense on Fundamental
Observations and Discoveries....................................................... 264
3 Forgotten Common Sense to Systematically Study Cancer
Science: Bases for Lack of Progress in Therapy or Prevention....... 269
4 American Tragedy of 1955s: Virus-Contaminated Polio Vaccines and Sharp Increase in Cancer Incidence and Mortality and Other Chronic Inflammatory Diseases in Baby Boomer Generation: A Sick Drug-Dependent Society ........... 271
6 Hypersensitivity Reactions or Biological Terrorists: Tissue-Specific Immune Disorders or Cancers .......................... 275
7 Immune Disorders: Common Denominators of ‘Mild’, ‘Moderate’ or ‘Severe’ Hypersensitivity Responses: Cancer a ‘Severe’ Cumulative Altered Immune Responses that Destroy Architectural Integrity of Tissue ......................................... 281
7.1 Histamine a Blue Print? [An Idea Who’s Time Has Come!] ..................................................................... 281
7.2 Interdependent Categories in Age-Associated Chronic Diseases ........................................................ 283
8 Metabolism and Function of Histamine (Catecholamine) in Acute and Chronic Inflammatory Diseases ....................... 284
8.1 Spectrum of Anaphylaxis and Inflammatory Diseases: When Beneficial Biphasic Yin and Yang of Immunity becomes Health Hazards ................................................................. 285
8.2 Allergies and Induction of Diverse Diseases and Cancer ...... 287
9 The Many Faces of Histamine: Friend and Foe! ......................... 288
9.1 Biological Gaps: Connecting Dots on Diverse Function of Histamine Under Oxidative Stress and Aging Process ...... 293
10 Energy-Requiring Activation of Immune Cells in Health or Immune Disorders: Role of Mitochondrial Oxidative Phosphorylation and Autophagy ................................................................. 294
11 Bioenergetics of Mast Cell Exocytosis, Secretory Lysosomes and Ca$$^{2+}$$ Fluxes in Acute and Chronic Inflammation ............ 296
12 Histamine Influence on Tissue Physiology and Function .......... 298
12.1 Oxidative Stress and Low Level Circulating Histamine: Preparing Host for Induction of Tumorigenesis? ....................... 300
12.2 Asthma: Intermediate Inflammatory Responses: Increased Risk of Cancer ......................................................... 301
12.3 Mediators of Late Phase Hypersensitivity Responses .......... 302
13 Pattern Recognition Receptors (PRRs) in Biological Events: Constituent (Innate) and Induced (‘Designer’). Crucial Roles in Circadian Rhythms and Immunity ............................................................... 304
13.1 Constituent: Innate and Adoptive Receptors and Surface Molecules ........................................................................ 305
13.2 Induced or Transient Receptors and Surface Molecules: ‘Designer’ Molecules .......................................................... 305
