## Contents

1 **Introduction** .................................................. 1  
   1.1 Ecological and Economic Challenges and the Built Environment .................................................. 1  
   1.2 Research Aim and Audience. ................................ 3  
   1.3 Research Question .......................................... 4  
   References .................................................... 5  

2 **Modern History of Sustainable Architecture** ...................... 7  
   2.1 Historical Background ..................................... 7  
   2.2 Towards a New Architectural Design Paradigm .............. 9  
   References .................................................... 10  

3 **Definitions and Paradigm Shift** .................................. 13  
   3.1 Negative Impact Reduction via Increased Efficiency. ........ 13  
   3.2 Positive Impact via Increased Regenerative Effectiveness .... 15  
   References .................................................... 17  

4 **Design Principles of Regenerative Design** .......................... 19  
   4.1 Introduction .............................................. 19  
   4.2 Guiding Principles ....................................... 20  
   4.3 Framework for Regenerative Building Design ............... 21  
      4.3.1 Regenerative Construction Systems .................. 22  
      4.3.2 Regenerative Design Elements ....................... 24  
      4.3.3 Regenerative Building Materials and Products ...... 24  
   4.4 Design Strategies for Regenerative Building Design ...... 26  
      4.4.1 Design Strategy 1: Selection of a Construction System...... 26  
      4.4.2 Design Strategy 2: Defining of Design Elements and Their Performance ........................ 27  
      4.4.3 Enhance Air Quality and Human Health .................. 27  
      4.4.4 Energy Saving ......................................... 28  
      4.4.5 Renewable Energy Production ......................... 28
5 Indicators and Metrics of Regenerative Design
   5.1 Introduction ........................................... 33
   5.2 Life Cycle Standards and System Boundary. ............ 35
   5.3 Functional Unit, Year, Tools and Indicators ........... 39
   5.4 Life Cycle Inventory .................................... 41
   5.5 Limitations ........................................... 44
   References ................................................ 44

6 Case Studies: Energy Efficiency Versus Regenerative Paradigm .... 47
   6.1 Introduction .......................................... 47
   6.2 Case Study 1: Efficiency Paradigm (Office Building) .... 48
   6.3 Case Study 2: Regenerative Paradigm (Office Building) .... 51
   6.4 Case Study 3: Regenerative Paradigm (Office Building) .... 53
   6.5 Case Study 4: Regenerative Paradigm (Residential Building) ... 56
   References ................................................ 59

7 Performance Comparison and Quantification ........................ 61
   7.1 Introduction .......................................... 61
   7.2 Case Study 1: Efficiency Paradigm ...................... 62
   7.3 Case Study 2: Regenerative Paradigm ..................... 66
   7.4 Case Study 3: Regenerative Paradigm ..................... 68
   7.5 Case Study 4: Regenerative Paradigm ..................... 71
   7.6 Case Studies Comparison ................................ 73
   References ................................................ 79

8 Regenerative and Positive Impact Architecture Roadmap ............ 81
   8.1 Introduction .......................................... 81
   8.2 Research Findings. .................................... 82
   8.3 A Novel Framework for Regenerative Building Design ....... 83
   8.4 Lessons Learned ....................................... 84
   8.5 Implications for Research and Architectural Design Practice ... 90
   References ................................................ 93
Regenerative and Positive Impact Architecture
Learning from Case Studies
Attia, S.
2018, XIX, 94 p. 29 illus., 26 illus. in color., Softcover
ISBN: 978-3-319-66717-1
