

Contents

Statistics on Non-linear Data

Stochastic Development Regression Using Method of Moments	3
<i>Line Kühnel and Stefan Sommer</i>	
Bootstrapping Descriptors for Non-Euclidean Data	12
<i>Benjamin Eltzner and Stephan Huckemann</i>	
Sample-Limited L_p Barycentric Subspace Analysis on Constant Curvature Spaces	20
<i>Xavier Pennec</i>	
Parallel Transport in Shape Analysis: A Scalable Numerical Scheme	29
<i>Maxime Louis, Alexandre Bône, Benjamin Charlier, Stanley Durrleman, and The Alzheimer's Disease Neuroimaging Initiative</i>	
Maximum Likelihood Estimation of Riemannian Metrics from Euclidean Data	38
<i>Georgios Arvanitidis, Lars Kai Hansen, and Søren Hauberg</i>	

Shape Space

Shape Analysis on Lie Groups and Homogeneous Spaces	49
<i>Elena Celledoni, Sølve Eidnes, Markus Eslitzbichler, and Alexander Schmeding</i>	
Optimal Matching Between Curves in a Manifold	57
<i>Alice Le Brigant, Marc Arnaudon, and Frédéric Barbaresco</i>	
Optimization in the Space of Smooth Shapes	65
<i>Kathrin Welker</i>	
Surface Matching Using Normal Cycles	73
<i>Pierre Roussillon and Joan Alexis Glaunès</i>	

Optimal Transport and Applications: Image Processing

Regularized Barycenters in the Wasserstein Space	83
<i>Elsa Cazelles, Jérémie Bigot, and Nicolas Papadakis</i>	
Extremal Curves in Wasserstein Space	91
<i>Giovanni Conforti and Michele Pavon</i>	

Semi-discrete Optimal Transport in Patch Space for Enriching Gaussian Textures 100
Bruno Galerne, Arthur Leclaire, and Julien Rabin

Analysis of Optimal Transport Related Misfit Functions in Seismic Imaging 109
Yunan Yang and Björn Engquist

Optimal Transport and Applications: Signal Processing

Information Geometry of Wasserstein Divergence 119
Ryo Karakida and Shun-ichi Amari

Anomaly Detection in Network Traffic with a Relational Clustering Criterion 127
Damien Nagues

Diffeomorphic Random Sampling Using Optimal Information Transport 135
Martin Bauer, Sarang Joshi, and Klas Modin

Optimal Transport to Rényi Entropies 143
Olivier Rioul

Statistical Manifold and Hessian Information Geometry

Statistical Manifolds Admitting Torsion, Pre-contrast Functions and Estimating Functions 153
Masayuki Henmi

Generalized Wintegen Type Inequality for Lagrangian Submanifolds in Holomorphic Statistical Space Forms 162
Michel Nguiffo Boyom, Mohd. Aquib, Mohammad Hasan Shahid, and Mohammed Jamali

Amari Functors and Dynamics in Gauge Structures 170
Michel Nguiffo Boyom and Ahmed Zeglaoui

Sasakian Statistical Manifolds II 179
Hitoshi Furuhashi

(Para-)Holomorphic Connections for Information Geometry 186
Sergey Grigorian and Jun Zhang

Matrix Realization of a Homogeneous Hessian Domain 195
Hideyuki Ishi

Monotone Embedding in Information Geometry

Information Geometry Under Monotone Embedding. Part I:
 Divergence Functions 205
Jun Zhang and Jan Naudts

Information Geometry Under Monotone Embedding. Part II: Geometry 215
Jan Naudts and Jun Zhang

A Sequential Structure of Statistical Manifolds on Deformed
 Exponential Family 223
Hiroshi Matsuzoe, Antonio M. Scarfone, and Tatsuaki Wada

Normalization and φ -function: Definition and Consequences 231
*Luiza H.F. de Andrade, Rui F. Vigelis, Francisca L.J. Vieira,
 and Charles C. Cavalcante*

Deformed Exponential Bundle: The Linear Growth Case 239
Luigi Montrucchio and Giovanni Pistone

On Affine Immersions of the Probability Simplex
 and Their Conformal Flattening 247
Atsumi Ohara

Information Structure in Neuroscience

Pairwise Ising Model Analysis of Human Cortical Neuron Recordings. 257
Trang-Anh Nghiem, Olivier Marre, Alain Destexhe, and Ulisse Ferrari

Prevalence and Recoverability of Syntactic Parameters in Sparse
 Distributed Memories 265
*Jeong Joon Park, Ronnel Boettcher, Andrew Zhao, Alex Mun,
 Kevin Yuh, Vibhor Kumar, and Matilde Marcolli*

Multi-scale Activity Estimation with Spatial Abstractions. 273
Majd Hawasly, Florian T. Pokorny, and Subramanian Ramamoorthy

Geometry of Policy Improvement 282
Guido Montúfar and Johannes Rauh

Joint Geometric and Photometric Visual Tracking Based on Lie Group 291
Chenxi Li, Zelin Shi, Yunpeng Liu, and Tianci Liu

Geometric Robotics and Tracking

Drone Tracking Using an Innovative UKF 301
Marion Pilté, Silvère Bonnabel, and Frédéric Barbaresco

Particle Observers for Contracting Dynamical Systems	310
<i>Silvère Bonnabel and Jean-Jacques Slotine</i>	
Sigma Point Kalman Filtering on Matrix Lie Groups Applied to the SLAM Problem	318
<i>James Richard Forbes and David Evan Zlotnik</i>	
A Topological View on Forced Oscillations and Control of an Inverted Pendulum	329
<i>Ivan Polekhin</i>	
Uniform Observability of Linear Time-Varying Systems and Application to Robotics Problems.	336
<i>Pascal Morin, Alexandre Eudes, and Glauco Scandaroli</i>	
Global Exponential Attitude and Gyro Bias Estimation from Vector Measurements.	345
<i>Philippe Martin and Ioannis Sarras</i>	
Geometric Mechanics and Robotics	
Geometric Degree of Non Conservativeness	355
<i>Jean Lerbet, Noël Challamel, François Nicot, and Félix Darve</i>	
A Symplectic Minimum Variational Principle for Dissipative Dynamical Systems	359
<i>Abdelbacet Oueslati, An Danh Nguyen, and Géry de Saxcé</i>	
Torsional Newton–Cartan Geometry.	367
<i>Eric Bergshoeff, Athanasios Chatzistavrakidis, Luca Romano, and Jan Rosseel</i>	
Self-oscillations of a Vocal Apparatus: A Port-Hamiltonian Formulation	375
<i>Thomas Hélie and Fabrice Silva</i>	
Non Linear Propagation in Reissner Beams: An Integrable System?	384
<i>Frédéric Hélein, Joël Bensoam, and Pierre Carré</i>	
Quantum Harmonic Analysis and the Positivity of Trace Class Operators; Applications to Quantum Mechanics	393
<i>Elena Nicola, Maurice de Gosson, and Fabio Nicola</i>	
Stochastic Geometric Mechanics and Lie Group Thermodynamics	
A Variational Formulation for Fluid Dynamics with Irreversible Processes . . .	401
<i>François Gay-Balmaz and Hiroaki Yoshimura</i>	

Dirac Structures in Nonequilibrium Thermodynamics	410
<i>Hiroaki Yoshimura and François Gay-Balmaz</i>	
About the Definition of Port Variables for Contact Hamiltonian Systems	418
<i>Bernhard Maschke and Arjan van der Schaft</i>	
Method of Orbits of Co-Associated Representation in Thermodynamics of the Lie Non-compact Groups	425
<i>Vitaly Mikheev</i>	
Poly-symplectic Model of Higher Order Souriau Lie Groups Thermodynamics for Small Data Analytics	432
<i>Frederic Barbaresco</i>	
Thermodynamic Equilibrium and Relativity: Killing Vectors and Lie Derivatives	442
<i>F. Becattini</i>	
Probability on Riemannian Manifolds	
Natural Langevin Dynamics for Neural Networks	451
<i>Gaétan Marceau-Caron and Yann Ollivier</i>	
3D Insights to Some Divergences for Robust Statistics and Machine Learning	460
<i>Birgit Roensch and Wolfgang Stummer</i>	
A Stochastic Look at Geodesics on the Sphere	470
<i>Marc Arnaudon and Jean-Claude Zambrini</i>	
Constructing Universal, Non-asymptotic Confidence Sets for Intrinsic Means on the Circle.	477
<i>Matthias Glock and Thomas Hotz</i>	
Noncommutative Geometry and Stochastic Processes.	486
<i>Marco Frasca</i>	
Hamilton-Jacobi Theory and Information Geometry.	495
<i>Florio M. Ciaglia, Fabio Di Cosmo, and Giuseppe Marmo</i>	
Divergence Geometry	
Log-Determinant Divergences Between Positive Definite Hilbert-Schmidt Operators	505
<i>Hà Quang Minh</i>	

Some New Flexibilizations of Bregman Divergences and Their Asymptotics 514
Wolfgang Stummer and Anna-Lena Kießlinger

Quantification of Model Risk: Data Uncertainty 523
Z. Krajčovičová, P.P. Pérez-Velasco, and C. Vázquez

Process Comparison Combining Signal Power Ratio and Jeffrey’s Divergence Between Unit-Power Signals 532
Eric Grivel and Leo Legrand

Non-parametric Information Geometry

Itô Stochastic Differential Equations as 2-Jets 543
John Armstrong and Damiano Brigo

The Cramér-Rao Inequality on Singular Statistical Models 552
Hông Vân Lê, Jürgen Jost, and Lorenz Schwachhöfer

Information Geometry of Predictor Functions in a Regression Model 561
Shinto Eguchi and Katsuhiro Omae

Translations in the Exponential Orlicz Space with Gaussian Weight 569
Giovanni Pistone

On Mixture and Exponential Connection by Open Arcs 577
Marina Santacroce, Paola Siri, and Barbara Trivellato

Optimization on Manifold

Applying Backward Nested Subspace Inference to Tori and Polyspheres 587
Benjamin Eltzner and Stephan Huckemann

Fast Method to Fit a C^1 Piecewise-Bézier Function to Manifold-Valued Data Points: How Suboptimal is the Curve Obtained on the Sphere \mathbb{S}^2 ? 595
Pierre-Yves Gousenbourger, Laurent Jacques, and P.-A. Absil

Nonlocal Inpainting of Manifold-Valued Data on Finite Weighted Graphs 604
Ronny Bergmann and Daniel Tenbrinck

Affine-Invariant Orders on the Set of Positive-Definite Matrices 613
Cyrus Mostajeran and Rodolphe Sepulchre

Geodesic Least Squares Regression on the Gaussian Manifold with an Application in Astrophysics 621
Geert Verdoolaege

Computational Information Geometry

Warped Metrics for Location-Scale Models 631
Salem Said and Yannick Berthoumieu

Bregman Divergences from Comparative Convexity 639
Frank Nielsen and Richard Nock

Weighted Closed Form Expressions Based on Escort Distributions
for Rényi Entropy Rates of Markov Chains 648
Philippe Regnault, Valérie Girardin, and Loïck Lhote

On the Error Exponent of a Random Tensor with Orthonormal
Factor Matrices. 657
Rémy Boyer and Frank Nielsen

Coordinate-Wise Transformation and Stein-Type Densities. 665
Tomonari Sei

Probability Density Estimation

Riemannian Online Algorithms for Estimating Mixture Model Parameters . . . 675
*Paolo Zanini, Salem Said, Yannick Berthoumieu, Marco Congedo,
and Christian Jutten*

Density Estimation for Compound Cox Processes on Hyperspheres. 684
Florent Chatelain, Nicolas Le Bihan, and Jonathan H. Manton

Maximum Likelihood Estimators on Manifolds. 692
Hatem Hajri, Salem Said, and Yannick Berthoumieu

Von Mises-Like Probability Density Functions on Surfaces 701
Florence Nicol and Stéphane Puechmorel

Riemannian Gaussian Distributions on the Space of Positive-Definite
Quaternion Matrices 709
Salem Said, Nicolas Le Bihan, and Jonathan H. Manton

A Family of Anisotropic Distributions on the Hyperbolic Plane 717
Emmanuel Chevallier

Session Geometry of Tensor-Valued Data

A Riemannian Approach to Blob Detection in Manifold-Valued Images 727
Aleksei Shestov and Mikhail Kumskov

Co-occurrence Matrix of Covariance Matrices: A Novel Coding Model for the Classification of Texture Images.	736
<i>Ioana Ilea, Lionel Bombrun, Salem Said, and Yannick Berthoumieu</i>	
Positive Signal Spaces and the Mehler-Fock Transform	745
<i>Reiner Lenz</i>	
Bounding the Convergence Time of Local Probabilistic Evolution.	754
<i>Simon Apers, Alain Sarlette, and Francesco Ticozzi</i>	
Inductive Means and Sequences Applied to Online Classification of EEG . . .	763
<i>Estelle M. Massart and Sylvain Chevallier</i>	
Geodesic Methods with Constraints	
Vessel Tracking via Sub-Riemannian Geodesics on the Projective Line Bundle	773
<i>Erik J. Bekkers, Remco Duits, Alexey Mashtakov, and Yuri Sachkov</i>	
Anisotropic Edge-Based Balloon Eikonal Active Contours	782
<i>Da Chen and Laurent D. Cohen</i>	
Automatic Differentiation of Non-holonomic Fast Marching for Computing Most Threatening Trajectories Under Sensors Surveillance	791
<i>Jean-Marie Mirebeau and Johann Dreo</i>	
On the Existence of Paths Connecting Probability Distributions	801
<i>Rui F. Vigelis, Luiza H.F. de Andrade, and Charles C. Cavalcante</i>	
Classification of Totally Umbilical CR-Statistical Submanifolds in Holomorphic Statistical Manifolds with Constant Holomorphic Curvature . . .	809
<i>Michel Nguiffo Boyom, Aliya Naaz Siddiqui, Wan Ainun Mior Othman, and Mohammad Hasan Shahid</i>	
Applications of Distance Geometry	
An Approach to Dynamical Distance Geometry	821
<i>Antonio Mucherino and Douglas S. Gonçalves</i>	
Distance Geometry in Linearizable Norms	830
<i>Claudia D'Ambrosio and Leo Liberti</i>	
Self-similar Geometry for Ad-Hoc Wireless Networks: Hyperfractals.	838
<i>Philippe Jacquet and Dalia Popescu</i>	
Information Distances in Stochastic Resolution Analysis	847
<i>Radmila Pribić</i>	

k-Means Clustering with Hölder Divergences 856
Frank Nielsen, Ke Sun, and Stéphane Marchand-Maillet

Real Hypersurfaces in the Complex Quadric with Certain Condition
of Normal Jacobi Operator 864
Imsoon Jeong, Gyu Jong Kim, and Young Jin Suh

Newton’s Equation on Diffeomorphisms and Densities 873
Boris Khesin, Gerard Misiolek, and Klas Modin
