

Contents

| | |
|--|----|
| 1 Prologue | 1 |
| 1.1 Precise Position Measurements | 4 |
| 1.2 Outline of this Thesis | 8 |
| 1.2.1 Organization of Thesis | 9 |
| References | 9 |
| 2 Quantum Fluctuations in Linear Systems | 13 |
| 2.1 Kinematics of Fluctuations in Quantum Mechanics | 14 |
| 2.1.1 Operational Description of Fluctuations in Time | 16 |
| 2.1.2 Spectral Densities and Uncertainty Relations | 18 |
| 2.2 Dynamics Due to a Thermal Environment | 23 |
| 2.2.1 Effect of Fluctuations from a Thermal Environment | 26 |
| 2.3 Dynamics Due to a Meter | 29 |
| 2.3.1 Effect of Fluctuations from a Meter | 30 |
| References | 32 |
| 3 Phonons and Photons | 35 |
| 3.1 Phonons: Quantised Linear Elastodynamics | 35 |
| 3.1.1 Classical Description of Navier-Euler-Bernoulli Elastic Field | 37 |
| 3.1.2 Quantised Modes of the Elastic Field | 41 |
| 3.1.3 Mechanical Oscillator in Thermal Equilibrium | 43 |
| 3.2 Photons: Description and Detection | 46 |
| 3.2.1 Quadrature, Number, and Phase Operators | 49 |
| 3.2.2 Quantum and Classical Fluctuations in the Optical Field | 50 |
| 3.2.3 Detection of Optical Fluctuations | 54 |
| 3.2.4 From Propagating Modes to Standing Waves: Optical Cavity Coupled to a Waveguide | 69 |
| References | 79 |

- 4 Photon-Phonon Coupling: Cavity Optomechanics** 83
 - 4.1 Perturbing an Optical Cavity 83
 - 4.2 Effective Description: Single-Mode Cavity Optomechanics 87
 - 4.2.1 Steady-State Shifts 89
 - 4.2.2 Dynamical Back-Action 90
 - 4.3 Continuous Linear Measurement Using Cavity Optomechanics 94
 - References 100
- 5 Experimental Platform: Cryogenic Near-Field Cavity Optomechanics** 103
 - 5.1 Stressed Nanostring Coupled to an Optical Microcavity 104
 - 5.1.1 Near-Field Coupling 106
 - 5.1.2 Mechanical Properties of Stressed Radio-Frequency Beams 108
 - 5.2 Measurement and Calibration of Thermomechanical Motion 111
 - 5.3 Cryogenic Operation 116
 - 5.3.1 Nature of Elastic Force: Radiation Pressure Versus Thermoelasticity 121
 - 5.4 Experimental Schematic 123
 - References 125
- 6 Observation and Feedback-Suppression of Measurement Back-Action** 127
 - 6.1 Quantum-Noise-Limited Position Measurement 128
 - 6.1.1 Measurement Imprecision and Back-Action in a Split-Mode Cavity 129
 - 6.1.2 Measurement Imprecision 135
 - 6.1.3 Measurement Back-Action 142
 - 6.2 Feedback Suppression of Back-Action 145
 - 6.2.1 Synthesis of a Linear Quadratic Gaussian Controller 147
 - 6.2.2 Feedback by Cold Damping 153
 - 6.2.3 Implementation of Feedback 156
 - 6.2.4 Feedback Cooling to Near the Ground State 160
 - 6.3 Conclusion 161
 - References 162
- 7 Observation of Quantum Correlations Using Feedback** 165
 - 7.1 Quantum Correlations Due to Light-Motion Interaction 166
 - 7.1.1 Manifestation as Ponderomotive Squeezing 167
 - 7.1.2 Manifestation as Sideband Asymmetry 169
 - 7.2 Observation of Quantum Correlations 170
 - 7.2.1 Observation of Ponderomotive Squeezing 170
 - 7.2.2 Observation of Sideband Asymmetry Using Feedback 175

- 7.3 Conclusion 188
- References 189
- 8 Epilogue 191**
 - 8.1 Quantum Correlations for Metrology and Control 192
 - References 195
- Appendix A: Uncertainty Inequalities 197**
- Appendix B: Miscellanea on Elastodynamics 201**
- Appendix C: Response of an Imbalanced Interferometer 211**

Quantum Limits on Measurement and Control of a
Mechanical Oscillator

Sudhir, V.

2018, XIX, 214 p. 46 illus., 43 illus. in color., Hardcover

ISBN: 978-3-319-69430-6
