Contents

Invited Papers

Discrete Energy Laws for the First-Order System Least-Squares Finite-Element Approach ............................................. 3

Multipatch Space-Time Isogeometric Analysis of Parabolic Diffusion Problems ..................................................... 21
   U. Langer, M. Neumüller, and I. Toulopoulos

Numerical Methods for Controlled Switching Diffusions ............... 33
   G. Yin, C. Zhang, and L. Y. Wang

Space-Time Methods for Solving Time-Dependent PDEs

Preconditioners for Time-Harmonic Optimal Control
Eddy-Current Problems .......................................................... 47
   Owe Axelsson and Dalibor Lukáš

Functional Type Error Control for Stabilised Space-Time IgA Approximations to Parabolic Problems ....................... 55
   Ulrich Langer, Svetlana Matculevich, and Sergey Repin

An Algebraic Multigrid Method for an Adaptive Space–Time Finite Element Discretization ...................................... 66
   Olaf Steinbach and Huidong Yang

Advanced Discretizations and Solvers for Coupled Systems of Partial Differential Equations

Splitting Schemes for Mixtures of Nematic-Isotropic Flows with Anchoring Effects .................................................. 77
   Giordano Tierra, Francisco Guillén-González, and María Ángeles Rodríguez-Bellido

Two Classes of Vector Domain Decomposition Schemes for Time-Dependent Problems with Overlapping Subdomains ....... 85
   Petr N. Vabishchevich
Least-Squares Finite Element Methods

An Alternative Proof of a Strip Estimate for First-Order System
Least-Squares for Interface Problems ........................................ 95
   Fleurianne Bertrand

Spectral Mimetic Least-Squares Method for Div-curl Systems. ........... 103
   Marc Gerritsma and Artur Palha

Spectral Mimetic Least-Squares Methods on Curvilinear Grids ............ 111
   R. O. Hjort and B. Gervang

   Artur Palha and Marc Gerritsma

Numerical Solution of Cahn-Hilliard System by Adaptive Least-Squares
Spectral Element Method ..................................................... 128
   Keunsoo Park, Marc Gerritsma, and Maria Fernandino

Stress-Velocity Mixed Least-Squares FEMs for the Time-Dependent
Incompressible Navier-Stokes Equations ................................. 137
   Alexander Schwarz, Carina Nisters, Solveigh Averweg,
   and Jörg Schröder

Advances in Heterogeneous Numerical Methods for Multi
Physics Problems

A Virtual Control Coupling Approach for Problems with Non-coincident
Discrete Interfaces ............................................................ 147
   Pavel Bochev, Paul Kuberry, and Kara Peterson

Towards a Scalable Multifidelity Simulation Approach for Electrokinetic
Problems at the Mesoscale .................................................. 156
   Brian D. Hong, Mauro Perego, Pavel Bochev, Amalie L. Frischknecht,
   and Edward G. Phillips

Advanced Numerical Methods for Nonlinear Elliptic Partial
Differential Equations

On a Problem of Optimal Control of Convection-Diffusion Processes ...... 167
   Aigul Manapova and Fedor Lubyshev

Verifications of Primal Energy Identities for Variational Problems
with Obstacles ............................................................... 175
   Sergey Repin and Jan Valdman
Control and Optimization of Dynamical Systems

An Optimal Control Problem with a Risk Zone .......................... 185
Sergey M. Aseev

Spreading Rumors and External Actions ................................. 193
Séverine Bernard, Téniassa César, and Alain Piétrus

Superposition Principle for Differential Inclusions .................. 201
Giulia Cavagnari, Antonio Marigonda, and Benedetto Piccoli

Estimation of Star-Shaped Reachable Sets of Nonlinear Control Systems . . . 210
Tatiana F. Filippova

On Reachability Analysis of Nonlinear Systems with Joint Integral Constraints ................................. 219
Mikhail Gusev

Existence Theorem for Infinite Horizon Optimal Control Problems with Mixed Control-State Isoperimetrical Constraint .................... 228
Valeriya Lykina

On the Regularity of Linear-Quadratic Optimal Control Problems with Bang-Bang Solutions ............................................. 237
J. Preininger, T. Scarinci, and V. M. Veliov

HPC and Big Data: Algorithms and Applications

On Monte Carlo and Quasi-Monte Carlo for Matrix Computations ........ 249
Vassil Alexandrov, Diego Davila, Oscar Esquivel-Flores,
Aneta Karaivanova, Todor Gurov, and Emanouil Atanassov

On the Parallel Implementation of Quasi-Monte Carlo Algorithms .......... 258
E. Atanassov, T. Gurov, S. Ivanovska, A. Karaivanova,
and T. Simchev

TVRegCM Numerical Simulations - Preliminary Results .................. 266
Georgi Gadzhev, Vladimir Ivanov, Kostadin Ganev,
and Hristo Chervenkov

Territorial Design Optimization for Business Sales Plan ................ 275
Laura Hervert-Escobar and Vassil Alexandrov

Monte Carlo Algorithms for Problems with Partially Reflecting Boundaries ............................................. 283
Nikolai A. Simonov
## Toward Exascale Computation

Renormalization Based MLMC Method for Scalar Elliptic SPDE

*Oleg Iliev, Jan Mohring, and Nikolay Shegunov*

295

Performance Analysis of MG Preconditioning on Intel Xeon Phi:
Towards Scalability for Extreme Scale Problems with
Fractional Laplacians

*Nikola Kosturski, Svetozar Margenov, and Yavor Vutov*

304

## Application of Metaheuristics to Large-Scale Problems

Training Feed-Forward Neural Networks Employing Improved
Bat Algorithm for Digital Image Compression

*Adis Alihodzic*

315

Modeling and Optimization of Pickup and Delivery Problem
Using Constraint Logic Programming

*Amelia Bădică, Costin Bădică, Florin Leon, and Ion Bulgij*

324

Intercriteria Analysis over Intuitionistic Fuzzy Data

*Veselina Bureva, Evdokia Sotirova, Vassia Atanassova,
Nora Angelova, and Krassimir Atanassov*

333

Genetic Algorithm with Optimal Recombination for the Asymmetric
Travelling Salesman Problem

*Anton V. Eremeev and Yulia V. Kovalenko*

341

Heuristic Algorithm for 2D Cutting Stock Problem

*Georgi Evtimov and Stefka Fidanova*

350

Influence of Ant Colony Optimization Parameters
on the Algorithm Performance

*Stefka Fidanova and Olympia Roeva*

358

2D Optimal Packing with Population Based Algorithms

*Desislava Koleva, Maria Barova, and Petar Tomov*

366

A Non-dominated Sorting Approach to Bi-objective Optimisation
of Mixed-Model Two-Sided Assembly Lines

*Ibrahim Kucukkoc*

374

Development of Threshold Algorithms for a Location Problem
with Elastic Demand

*Tatyana Levanova and Alexander Gnusarev*

382
Investigation of Genetic Algorithm Performance Based on Different Algorithms for InterCriteria Relations Calculation .................................................. 390
  *Tania Pencheva, Olympia Roeva, and Maria Angelova*

Free Search in Multidimensional Space M ........................................ 399
  *Kalin Penev*

Generalized Net Model of Adhesive Capsulitis Diagnosing ........................ 408
  *Simeon Ribagin, Evdokia Sotirova, and Tania Pencheva*

Adaptive Multi-agent System Based on Wasp-Like Behaviour for the Virtual Learning Game Sotirios ......................................................... 416
  *Dana Simian and Florentin Bota*

Hybrid Approach Based on Combination of Backpropagation and Evolutionary Algorithms for Artificial Neural Networks Training by Using Mobile Devices in Distributed Computing Environment .................. 425
  *Iliyan Zankinski, Maria Barova, and Petar Tomov*

**Large-Scale Models: Numerical Methods, Parallel Computations and Applications**

Solution of the 3D Neutron Diffusion Benchmark by FEM .......................... 435
  *A. V. Avvakumov, P. N. Vabishchevich, A. O. Vasilyev, and V. F. Strizhov*

Precipitation Pattern Estimation with the Standardized Precipitation Index in Projected Future Climate over Bulgaria ................................. 443
  *Hristo Chervenkov and Valery Spiridonov*

Time Discretization/Linearization Approach Based on HOC Difference Schemes for Semilinear Parabolic Systems of Atmosphere Modelling ............... 450
  *I. Dimov, J. Kandilarov, V. Todorov, and L. Vulkov*

Landslide Hazard, Environmental Dependencies and Computer Simulations ................................................................. 458
  *Nina Dobrinkova and Pierluigi Maponi*

On the Winter Wave Climate of the Western Black Sea: The Changes During the Last 115 Years ............................................................... 466
  *Vasko Galabov and Hristo Chervenkov*

Computer Simulations of Atmospheric Composition in Urban Areas. Some Results for the City of Sofia ......................................................... 474
  *Ivelina Georgieva, Georgi Gadzhev, Kostadin Ganev, and Nikolay Miloshev*
