1 Introduction	
E. Joos	1
2 Basic Concepts and Their Interpretation	
H. D. Zeh	7
2.1 The Phenomenon of Decoherence	7
2.1.1 Superpositions	7
2.1.2 Superselection Rules	11
2.1.3 Decoherence by “Measurements”	13
2.2 Observables as a Derived Concept	17
2.3 The Measurement Problem	21
2.4 Density Matrix, Coarse Graining, and “Events”	33
2.5 Conclusions	40
3 Decoherence Through Interaction with the Environment	
E. Joos	41
3.1 The General Mechanisms of Decoherence	47
3.1.1 Dynamics of Quantum Correlations	47
3.1.2 Scattering Processes	55
3.1.3 Environment-Induced Superselection Rules	57
3.2 Localization of Objects	62
3.2.1 Localization Through Ideal Measurements	64
3.2.1.1 Spatial Decoherence	64
3.2.1.2 Equation of Motion	70
3.2.1.3 Decohering Wave Packets	75
3.2.1.4 More General Recoil-Free Decoherence	78
3.2.2 Decoherence and Dissipation	79
3.2.2.1 Quantum Brownian Motion	79
3.2.2.2 Ehrenfest Theorems	87
3.2.2.3 Decoherence Versus Friction	89
3.2.3 Wigner Function Description of Decoherence	90
3.2.4 Molecular Structure	99
3.2.5 Decoherence in the Brain	107

3.3	Dynamical Consequences	109
3.3.1	The Quantum Zeno Effect	110
3.3.1.1	Phenomenological Description	111
3.3.1.2	An Experimental Test	118
3.3.1.3	Models for the Quantum Zeno Effect	122
3.3.2	Master Equations	126
3.3.2.1	Pauli Equation	126
3.3.2.2	Lindblad’s Form of Master Equations	133
3.3.3	Dynamical Stability of States	135
3.3.3.1	Sensitivity to the Presence of an Environment	136
3.3.3.2	Decoherence and Quantum Computation	145
3.3.3.3	Quantum Nondemolition Measurements	147
3.3.4	Decoherence and Quantum Chaos	149
3.3.4.1	Classical Versus Quantum Chaos	149
3.3.4.2	Example: The Kicked Rotator	152
3.3.4.3	Quantum (?) Chaos in the Solar System	156
3.3.4.4	Decoherence Through Chaotic Environments	159
3.4	Interpretational Issues	161
3.4.1	Null Measurements, Histories and Quantum Jumps	161
3.4.2	Quantum “Information” and Teleportation	172
3.4.3	True, False, and Fake Decoherence	175
4	Decoherence in Quantum Field Theory and Quantum Gravity	
C. Kiefer	181
4.1	Decoherence in Quantum Electrodynamics	182
4.1.1	“Measurement” of Charges by Fields	182
4.1.2	“Measurement” of Electromagnetic Fields by Charges	188
4.2	Decoherence and the Gravitational Field	192
4.2.1	Emergence of Classical Spacetime	192
4.2.2	The Formalism of Quantum Cosmology	196
4.2.3	Decoherence in Quantum Cosmology	199
4.2.4	Classicality of Primordial Fluctuations in the Early Universe	209
4.2.5	Black Holes, Wormholes, and String Theory	218
5	Consistent Histories and Decoherence	
C. Kiefer	227
5.1	Influence Functional and Its Application to Quantum Brownian Motion	229
5.2	Definition and Properties of Consistent Histories	238
5.3	Reduced Density Matrix and Decoherence	247
5.4	Consistent Histories, Arrow of Time, and Quantum Gravity	251

6 Superselection Rules and Symmetries	
D. Giulini	259
6.1 States, Observables, and Superselection Rules	261
6.1.1 Spaces of States	262
6.1.2 Spaces of Observables	267
6.1.3 Superselection Rules	275
6.2 Symmetries and Superselection Rules	278
6.2.1 Symmetries	279
6.2.2 Superselection Rules from Symmetries	284
6.2.3 An Example: The Univalence Superselection Rule	285
6.2.4 Discussion and Caveats	287
6.3 Physical Symmetries Versus Gauge Transformations	289
6.3.1 Configuration Spaces and Spaces of State	289
6.3.2 Symmetries and Redundant State Spaces	292
6.3.3 Symmetries, Redundancies, and Superselection Rules	297
6.4 Superselection Rules in Field Theory	303
6.4.1 Charge and Asymptotic Flux-Distribution in QED	304
6.4.2 Poincaré Charges in General Relativity	310
6.4.3 Decoherence and Charge Superselection Rules	312
7 Open Quantum Systems	
J. Kupsch	317
7.1 Reduced Dynamics	319
7.2 Projection Methods	321
7.3 Generalized Master Equations	327
7.4 Markov Approximation and Semigroups	330
7.5 Quantum Stochastic Processes	333
7.6 Induced Superselection Sectors	339
7.6.1 General Considerations	339
7.6.2 Hamiltonian Models of Decoherence	341
7.6.2.1 The Araki-Zurek Models	343
7.6.2.2 Particle Coupled to a Massless Boson Field	345
7.6.2.3 Models with Scattering	347
7.6.2.4 Heisenberg Picture	348
7.7 Mathematical Supplement	350
7.7.1 Spaces of Linear Operators	350
7.7.2 Complete Positivity	354
7.7.3 Entropy Inequalities	355
8 Stochastic Collapse Models	
I.-O. Stamatescu	357
8.1 The Question of State Vector Reduction	357
8.1.1 Two Points of View	357
8.1.2 Decoherence, Collapse, Measurement	358

8.1.3 Various Approaches to Collapse	363
8.2 Spontaneous Collapse Models	369
8.2.1 The Dynamical Collapse Hypothesis	369
8.2.2 Spontaneous Localization by a Jump Process	370
8.2.3 Continuous Spontaneous Localization	373
8.3 Spontaneous Localization, Quantum State Diffusion and Decoherence	378
9 Related Concepts and Methods	
H. D. Zeh	383
9.1 Phase Averaging in Ensembles (“Dephasing”)	383
9.2 Ergodicity and Irreversible Amplification	385
9.3 Dressing of States	387
9.4 Symmetry Breaking and Collective Motion	388
A1 Equation of Motion of a Mass Point	
E. Joos	395
A2 Solutions for the Equation of Motion	
E. Joos	399
A2.1 Gaussian Density Matrices	399
A2.2 Green Functions	402
A2.3 Some Derived Quantities	403
A3 Elementary Properties of Composite Systems in Quantum Mechanics	
D. Giulini	407
A4 Quantum Correlations	
I.-O. Stamatescu	415
A5 Hamiltonian Formulation of Quantum Mechanics	
D. Giulini	419
A6 Galilean Symmetry of Non-Relativistic Quantum Mechanics	
D. Giulini	425
A7 Stochastic Processes	
I.-O. Stamatescu	433
A7.1 Random Variables and Distributions	433
A7.2 Markov Chains	434
A7.3 Stochastic Processes	436
A7.4 The Fokker–Planck Equation	437
A7.5 Stochastic Differential Equations	439
References	445

Decoherence and the Appearance of a Classical World
in Quantum Theory

Joos, E.; Zeh, H.D.; Kiefer, C.; Giulini, D.J.W.; Kupsch, J.;
Stamatescu, I.-O.

2003, XII, 496 p., Hardcover

ISBN: 978-3-540-00390-8
