Physiological and Molecular Responses of *Bacillus subtilis* to Hypertonicity: Utilization of Evolutionarily Conserved Adaptation Strategies

Gudrun Holtmann, Clara D. Boiangiu, Jeanette Brill, Tamara Hoffmann, Anne U. Kuhlmann, Susanne Moses, Gabriele Nau-Wagner, Nathalie Pica, Erhard Bremer

7.1 Introduction

7.2 The Cell and the Surrounding Solvent

7.3 Microbial Strategies for Coping with Hyperosmotic Environments

7.4 Compatible Solutes: Characteristics and Physiological Functions

7.5 The Initial Stress Response of *B. subtilis*: Uptake of K+ through Biosynthesis

7.6 Accumulation of Compatible Solutes by *Bacillus* spp. through Biosynthesis

7.6.1 Osmoregulatory Synthesis of Proline

7.6.2 Osmoregulatory Synthesis of Ectoine

7.6.3 Osmoregulatory Synthesis of Glycine Betaine from Choline

7.7 Acquisition of Preformed Compatible Solutes by *B. subtilis* from Environmental Resources

7.8 Expulsion of Compatible Solutes: Protection Against Extreme Turgor

7.9 Perspectives

References

Genetics of Osmoadaptation by Accumulation of Compatible Solutes in the Moderate Halophile *Chromohalobacter salexigens*: Its Potential in Agriculture Under Osmotic Stress Conditions

Carmen Vargas, Maria-Isabel Calderon, Nieves Capote, Rocío Carrasco, Raúl García, María Jesús Moron, Antonio Ventosa, Joaquín J. Nieto

8.1 Introduction

8.2 *C. salexigens* as a Model Organism for Osmoadaptation Studies in Moderate Halophiles

8.3 Osmoadaptation Mechanisms in *C. salexigens*

8.3.1 Uptake of Osmoprotectants

8.3.2 *De Novo* Synthesis of Compatible Solute

8.4 Transcriptional Regulation of the *C. salexigens* *ect* Genes

8.5 Overlapping Regulatory Networks Controlling the Intracellular Content of Compatible Solutes
### 8.6 Use of *ect* Genes for the Generation of Transgenic Agriculturally Important Organisms

#### 8.6.1 Compatible Solutes Synthesis Genes as a Tool for the Production of Salt-Tolerant Crops

#### 8.6.2 Metabolic Engineering of Beans to Generate Osmotic-Stress-Resistant Varieties

### References

### 9 Osmoregulated Solute Transport in Halophilic Bacteria

**HANS JÖRG KUNTE**

#### 9.1 Introduction

#### 9.2 Compatible Solute Transport Systems of Nonhalophiles

#### 9.3 Osmosensing by Osmoregulated Transporters

#### 9.4 Osmoregulated Transport Systems in Halophilic Bacteria

##### 9.4.1 TeaABC is an Osmoregulated TRAP-Transporter

##### 9.4.2 TeaABC is a Recovery System for the Compatible Solute Ectoine

### 10 Molecular and Functional Adaptations Underlying the Exceptional Salt Tolerance of the Alga *Dunaliella salina*

**A. ZAMIR, M. AZACHI, U. BAGESHWAR, M. FISHER, I. GOKHMAN, L. PREMKUMAR, A. SADKA, T. SAVCHENKO**

#### 10.1 Introduction

#### 10.2 Results

##### 10.2.1 Salt Induction of Fatty Acid Elongase and Membrane Lipid Modifications

##### 10.2.1.1 A Salt-Inducible β-Ketoacyl-CoA Synthase

##### 10.2.2 Unique Salt Tolerance of Extracellular *Dunaliella* Proteins

##### 10.2.2.1 The 60-kDa Dca (Duplicated Carbonic Anhydrase)

##### 10.2.2.2 A 30-kDa Carbonic Anhydrase (p30)

#### 10.3 Discussion

##### 10.3.1 Proposed Role of Intracellular Membranes Modification in Salt Tolerance of *Dunaliella*

##### 10.3.2 The Significance and Basis of Salt Tolerance of Extracellular Carbonic Anhydrases
