Contents

1 Helix-Helix Packing Between Transmembrane Fragments . 1
Mar Orzáez, Francisco J. Taberner, Enrique Pérez-Payá, Ismael Mingarro

Abstract .......................................................... 1
1.1 Introduction ...................................................... 2
1.2 Glycophorin A as a Model System .......................... 3
1.3 Influence of the Distance Between the Dimerisation
Motif and the Flanking Charged Residues
on the Packing Process Between TM Helices .................... 5
1.4 Length of the Hydrophobic Fragment
and Oligomerisation Process ................................. 6
1.5 Prolines in Transmembrane Helix Packing ................ 8
1.6 Future Prospects for Membrane Protein Analysis ........ 11
References ......................................................... 12

2 Mobility Studies in Proteins by 15N Nuclear
Magnetic Resonance: Rusticyanin as an Example ....... 15
Beatriz Jiménez, José María Moratal, Mario Piccioli, Antonio Donaire

Abstract .......................................................... 15
2.1 Introduction ...................................................... 15
2.1.1 NMR Versus X-Ray for the Acquisition
of Dynamic Information .................................. 16
2.1.2 Dynamics of Proteins and NMR ......................... 17
2.1.2.1 Theoretical Considerations ......................... 17
2.1.2.2 A Quantitative Analysis of the Model-Free Approach ... 19
2.1.2.3 Practical Aspects ............................... 21
2.1.3 The System: Rusticyanin .............................. 23
3 Structure and Dynamics of Proteins in Crowded Media:
A Time-Resolved Fluorescence Polarization Study
SILVIA ZORRILLA, GERMAN RIVAS, MARIA PILAR LILLO

3.1 Macromolecular Crowding in Physiological Media
3.1.1 Effect of Macromolecular Crowding on Chemical Equilibrium of Macromolecular Association Reactions
3.1.2 Experimental Approaches to the Study of the Effect of Macromolecular Crowding Upon Biochemical Reactions
3.2 Application of Time-Resolved Fluorescence Polarization Spectroscopy in Crowded Media
3.3 Volume Fraction and Intermolecular Separations in a Heterogeneous System
3.3.1 Characterization of the Crowded Medium Itself
3.3.2 Microscopic Model for Crowded Solutions
3.4 Structure and Dynamics of apoMb Dimer in Crowded Protein Solutions
3.4.1 Preparation of Apomyoglobin and Labelling with ANS
3.4.2 Spectroscopic Properties of ANS Remain Essentially Unchanged Upon Dimer Formation
3.4.3 Conformational Dynamics of the Dimer of Apomyoglobin
3.5 Conclusions and Outlook
References

4 Analyses of Wheat Seed Proteome: Exploring Protein–Protein Interactions by Manipulating Genome Composition
NAZRUL ISLAMAND, HISASHI HIRANO
4.1 Summary
4.2 Introduction
5 Modification-Specific Proteomic Strategy for Identification of Glycosyl-Phosphatidylinositol Anchored Membrane Proteins

FELIX ELORTZA, LEONARD J. FOSTER, ALLAN STENSBALLE, OLE N. JENSEN

5.1 Summary .............................................. 67
5.2 Introduction .......................................... 68
5.2.1 Glycosyl-Phosphatidylinositol Anchored Proteins ........ 68
5.3 Results ............................................... 71
5.3.1 Selective Isolation of GPI-Anchored Proteins .......... 71
5.3.2 Identification of GPI-Anchored Proteins by Mass Spectrometry .......... 72
5.3.3 Protein Sequence Analysis ............................. 73
5.4 Discussion ........................................... 73
5.5 Conclusion .......................................... 75
5.6 Material and Methods .................................... 76
5.6.1 Lipid Raft Preparation ............................... 76
5.6.2 Two-Phase Separation and Phosphoinositol-Phospholipase C Treatment ........ 76
5.6.3 Mass Spectrometry ................................ 76
5.6.4 Bioinformatics .................................... 77
References ............................................... 77

12 Analysis of Protein-Protein Interactions in Complex
Biological Samples by MALDI TOF MS. Feasibility
and Use of the Intensity-Fading (IF-) Approach .......... 183
JOSEP VILLANUEVA, OSCAR YANES, ENRIQUE QUEROL,
LUIS SERRANO AND FRANCESC X. AVILÉS

12.1 Introduction ..................................................... 183
12.1.1 Mass Spectrometry as a Modern Approach
to Study Protein–Protein and Protein–Ligand Interactions . 183
12.1.2 Characterization of Non-Covalent Interactions Using ESI . 184
12.1.3 Characterization of Non-Covalent Interactions
Using MALDI .......................................................... 184
12.1.3.1 MALDI-Based Indirect Methods ...................... 184
12.1.3.2 MALDI-Based Direct Methods ....................... 185
12.1.3.3 The Intensity-Fading (IF) MALDI-T of Approach .... 186
12.2 Experimental Procedures ...................................... 186
12.2.1 Biomolecule Interaction Experiments ................... 186
12.2.1.1 General Sample Preparation ......................... 186
12.2.1.2 Protease–Inhibitor Interaction ....................... 187
12.2.2 MALDI-TOF Mass Spectrometry .......................... 187
12.2.2.1 Preparation of Samples for MALDI-TOF Mass Spectrometry ........................................ 187
12.2.2.2 MALDI-TOF Matrix Preparation ..................... 188
12.2.2.3 Sample-Matrix Preparation ............................ 188
12.3 Results and Discussion ........................................ 188
12.3.1 Basis for the Detection of Non-Covalent
Complexes by MALDI-TOF MS ................................. 188
12.3.2 Suggested Mechanism for “Intensity Fading”
(IF-) in MALDI-MS .................................................. 189
12.3.3 Semiquantitative Determination
of the Affinities Between the Interacting Partners .......... 190
12.3.4 Detection of Protein Ligands in Complex Samples .... 192
12.3.4.1 Ion Suppression Effects in MALDI-TOF MS,
and Sample Preparation for Complex Biological Samples ... 192
14.3.2 Thermal Denaturation Studies Monitored by Differential Scanning Calorimetry (DSC) 227
14.3.3 Circular Dichroism Spectroscopy 228
14.3.4 Conclusions Concerning the Structure of TbpB 229

Amino Acid Sequencing of Sulfonic Acid-Labeled Tryptic Peptides Using Post-Source Decay and Quadratic Field MALDI-ToF Mass Spectrometry

Rama Bhikhabhai, Mattias Algotsson, Ulrika Carlsson, John Flensburg, Lena Hörnsten, Camilla Larsson, Jean-Luc Maloisel, Ronnie Palmgren, Mari-Ann Pesula, Maria Liminga

Abstract

19.1 Introduction

19.2 Material and Methods

19.2.1 Chemicals

19.2.2 CAF Labeling Protocol

19.2.3 Analysis of Peptides by MALDI-ToF Mass Spectrometry

19.2.4 Interpretation of Spectra

19.2.5 Protein Identification

19.2.6 Analysis of Synthetic Phosphopeptides

19.3 Results and Discussion

19.3.1 Sequencing of a Synthetic Peptide

19.4 Identification/Confirmation of Recombinant Protein

19.4.1 Sensitivity

19.4.2 Sequencing of Phosphopeptides

19.4.2.1 Identification of Phosphopeptide

19.5 Conclusions

Increasing Throughput and Data Quality for Proteomics

Alfred L. Gaertner, Nicole L. Chow, Beth G. Fryksdale, Paul Jedrzejewski, Brian S. Miller, Sigrid Paech, David L. Wong

Abstract

25.1 Introduction

25.1.1 Prefractionation by Membrane Devices

25.1.2 Fractionation of a Fungal Exoproteome

25.1.3 Mass Spectrometry Identification After Prefractionation

25.2 Deglycosylation as a Means for Improved Protein Identification

25.2.1 Deglycosylation of a Fungal Proteome

25.2.2 Deglycosylation Summary

25.3 High-throughput Proteomics Method Optimization

25.3.1 Method Development to Increase Sample Consistency

25.3.2 Method Optimization and Results

25.3.2.1 Digestion Buffers

25.3.2.2 Extraction Buffers

25.3.2.3 Matrix Spotting Methods

25.3.3 High-throughput Proteomics (ProGest) Optimization

25.3.4 Conclusions

25.4 Protein Identification and Quantification using N\(^{14}/N^{15}\) Isotopic Labeling Technique

25.4.1 Identification and Quantification Technique

25.4.2 Conclusion
