Contents

1 Introduction .............................................. 1

Part I Historical Overview
and Three-Phase Traffic Theory

2 Spatiotemporal Pattern Formation
in Freeway Traffic ....................................... 13
  2.1 Introduction ........................................ 13
  2.2 Traffic and Synergetics .............................. 14
  2.3 Free and Congested Traffic .......................... 15
    2.3.1 Local Measurements of Traffic Variables ....... 15
    2.3.2 Examples of Freeway Infrastructures
        and Detector Arrangements .................... 17
    2.3.3 Free Traffic Flow .............................. 18
    2.3.4 Congested Traffic ............................. 21
    2.3.5 Empirical Fundamental Diagram ............... 22
    2.3.6 Complex Local Dynamics of Congested Traffic ..... 24
  2.4 Main Empirical Features of Spatiotemporal
      Congested Patterns .................................. 27
    2.4.1 Three Traffic Phases ........................... 27
    2.4.2 Characteristic Parameters of Wide Moving Jams .... 28
    2.4.3 Spontaneous Breakdown Phenomenon
        (Spontaneous F→S Transition) .................. 32
    2.4.4 Induced Breakdown Phenomenon ................. 34
    2.4.5 Synchronized Flow Patterns .................... 35
    2.4.6 Catch Effect .................................. 37
    2.4.7 Moving Jam Emergence in Synchronized Flow:
        General Pattern ................................. 41
    2.4.8 Expanded Congested Patterns ................... 46
    2.4.9 Foreign Wide Moving Jams ...................... 51
    2.4.10 Reproducible and Predictable Congested Patterns . 53
    2.4.11 Methodology for Empirical Congested Pattern Study 57
  2.5 Conclusions. Fundamental Empirical Features
      of Spatiotemporal Congested Patterns ................ 58
3 Overview of Freeway Traffic Theories and Models: Fundamental Diagram Approach ............... 63
  3.1 Introduction:
      Hypothesis About Theoretical Fundamental Diagram ........ 63
  3.2 Achievements of Fundamental Diagram Approach to Traffic Flow Modeling and Theory .............. 64
      3.2.1 Conservation of Vehicle Number on Road and Front Velocity .................................... 66
      3.2.2 The Lighthill–Whitham–Richards Model and Shock Wave Theory ................................. 67
      3.2.3 Collective Flow Concept and Probability of Passing .................................................. 68
      3.2.4 Scenarios for Moving Jam Emergence .......................................................... 69
      3.2.5 Wide Moving Jam Characteristics ................................................................. 69
      3.2.6 Flow Rate in Wide Moving Jam Outflow, The Line $J$ ................................................. 71
      3.2.7 Metastable States of Free Flow with Respect to Moving Jam Emergence ....................... 73
  3.3 Drawbacks of Fundamental Diagram Approach in Describing of Spatiotemporal Congested Freeway Patterns .......................................................... 78
      3.3.1 Shock Wave Theory .......................................................................................... 78
      3.3.2 Models and Theories of Moving Jam Emergence in Free Flow ................................. 80
      3.3.3 Models and Theories with Variety of Vehicle and Driver Characteristics .......................... 83
      3.3.4 Application of Classical Queuing Theories to Freeway Congested Traffic Patterns .............. 84
  3.4 Conclusions .................................................. 85

4 Basis of Three-Phase Traffic Theory ............................................. 87
  4.1 Introduction and Remarks on Three-Phase Traffic Theory .................................................... 87
  4.2 Definition of Traffic Phases in Congested Traffic Based on Empirical Data .......................... 88
      4.2.1 Objective Criteria for Traffic Phases in Congested Traffic ........................................... 88
      4.2.2 Explanation of Terms “Synchronized Flow” and “Wide Moving Jam” .............................. 90
      4.2.3 Mean Vehicle Trajectories ......................................................................................... 91
      4.2.4 Flow Rate in Synchronized Flow ............................................................................... 91
      4.2.5 Empirical Line $J$ ................................................................................................. 93
      4.2.6 Propagation of Two Wide Moving Jams ................................................................. 94
  4.3 Fundamental Hypothesis of Three-Phase Traffic Theory ....................................................... 95
4.3.1 Three-Phase Traffic Theory as Driver Behavioral Theory 98
4.3.2 Synchronization Distance and Speed Adaptation Effect in Synchronized Flow 100
4.3.3 Random Transformations ("Wandering") Within Synchronized Flow States 100
4.3.4 Dynamic Synchronized Flow States 101
4.4 Empirical Basis of Three-Phase Traffic Theory 102
4.5 Conclusions ............................................ 103

5 Breakdown Phenomenon (F→S Transition) in Three-Phase Traffic Theory 105
5.1 Introduction .............................................. 105
5.2 Breakdown Phenomenon on Homogeneous Road 106
  5.2.1 Speed Breakdown at Limit Point of Free Flow 106
  5.2.2 Critical Local Perturbation for Speed Breakdown 108
  5.2.3 Probability for Breakdown Phenomenon 110
  5.2.4 Threshold Flow Rate and Density, Metastability, and Nucleation Effects 111
  5.2.5 Z-Shaped Speed–Density and Passing Probability Characteristics 114
  5.2.6 Physics of Breakdown Phenomenon: Competition Between Over-Acceleration and Speed Adaptation 119
  5.2.7 Physics of Threshold Point in Free Flow 120
  5.2.8 Moving Synchronized Flow Pattern 122
5.3 Breakdown Phenomenon at Freeway Bottlenecks 123
  5.3.1 Deterministic Local Perturbation 123
  5.3.2 Deterministic F→S Transition 128
  5.3.3 Physics of Deterministic Speed Breakdown at Bottleneck 133
  5.3.4 Influence of Random Perturbations 133
  5.3.5 Z-Characteristic for Speed Breakdown at Bottleneck 136
  5.3.6 Physics of Speed Breakdown at Bottleneck 139
  5.3.7 Time Delay of Speed Breakdown 140
5.4 Conclusions .............................................. 142

6 Moving Jam Emergence in Three-Phase Traffic Theory 145
6.1 Introduction .............................................. 145
6.2 Wide Moving Jam Emergence in Free Flow 147
6.3 Wide Moving Jam Emergence in Synchronized Flow 150
  6.3.1 Hypothesis for Moving Jam Emergence in Synchronized Flow 150
  6.3.2 Features of Metastable Synchronized Flow States 155
  6.3.3 Stable High Density Synchronized Flow States 156

8 Freeway Capacity in Three-Phase Traffic Theory ............................... 217
  8.1 Introduction .......................................................... 217
  8.2 Homogeneous Road .................................................... 217
  8.3 Freeway Capacity in Free Flow at Bottlenecks ....................... 218
    8.3.1 Definition of Freeway Capacity .............................. 218
    8.3.2 Probability for Speed Breakdown at Bottlenecks .......... 220
    8.3.3 Threshold Boundary for Speed Breakdown .................. 223
    8.3.4 Features of Freeway Capacity at Bottlenecks ............ 226
  8.4 Z-Characteristic and Probability for Speed Breakdown .......... 228
  8.5 Congested Pattern Capacity at Bottlenecks ....................... 232
  8.6 Main Behavioral Assumptions of Three-Phase Traffic Theory .... 234
  8.7 Conclusions .......................................................... 237

Part II Empirical Spatiotemporal Congested Traffic Patterns

9 Empirical Congested Patterns at Isolated Bottlenecks .............. 241
  9.1 Introduction .......................................................... 241
  9.2 Effectual Bottlenecks and Effective Locations
    of Bottlenecks ......................................................... 242
    9.2.1 Effectual Bottlenecks on Freeway A5-South .............. 244
    9.2.2 Effectual Bottlenecks on Freeway A5-North .............. 247
    9.2.3 Isolated Effectual Bottleneck ............................... 247
  9.3 Empirical Synchronized Flow Patterns ........................... 250
    9.3.1 Widening Synchronized Flow Pattern ....................... 250
    9.3.2 Localized Synchronized Flow Pattern ....................... 255
    9.3.3 Moving Synchronized Flow Pattern ......................... 256
  9.4 Empirical General Patterns ........................................ 259
    9.4.1 Empirical General Pattern of Type (1) .................... 259
    9.4.2 Empirical General Pattern of Type (2) .................... 262
    9.4.3 Dependence of Effective Location
      of Bottleneck on Time ............................................ 264
  9.5 Conclusions .......................................................... 268

10 Empirical Breakdown Phenomenon:
  Phase Transition from Free Flow to Synchronized Flow .............. 269
  10.1 Introduction .......................................................... 269
  10.2 Spontaneous Breakdown Phenomenon
    (Spontaneous F→S Transition) at On-Ramp Bottlenecks ....... 270
10.3 Probability for $F \rightarrow S$ Transition ........................................... 274
  10.3.1 Empirical and Theoretical Definitions
      of Freeway Capacities at Bottlenecks ......................... 275
  10.3.2 Pre-Discharge Flow Rate ............................................. 278
10.4 Induced Speed Breakdown
      at On-Ramp Bottlenecks ............................................... 281
  10.4.1 $F \rightarrow S$ Transition Induced by Wide Moving Jam
      Propagation Through Effectual Bottleneck ...................... 282
  10.4.2 Induced Speed Breakdown at Bottlenecks
      Caused by Synchronized Flow Propagation ..................... 282
10.5 Breakdown Phenomenon at Off-Ramp Bottlenecks .................... 285
10.6 Breakdown Phenomenon Away from Bottlenecks ..................... 289
10.7 Some Empirical Features of Synchronized Flow ...................... 294
  10.7.1 Complex Behavior in Flow–Density Plane ....................... 294
  10.7.2 Three Types of Synchronized Flow ............................... 296
  10.7.3 Overlapping States of Free Flow
      and Synchronized Flow in Density .................................. 299
  10.7.4 Analysis of Individual Vehicle Speeds ......................... 302
10.8 Conclusions ................................................................. 302

11 Empirical Features
   of Wide Moving Jam Propagation ........................................ 305
  11.1 Introduction .............................................................. 305
  11.2 Characteristic Parameters of Wide Moving Jams .................. 305
      11.2.1 Empirical Determination of Line $J$ ......................... 306
      11.2.2 Dependence of Characteristic Jam Parameters
            on Traffic Conditions .......................................... 310
      11.2.3 Propagation of Wide Moving Jams
            Through Synchronized Flow .................................... 311
      11.2.4 Moving Blanks Within Wide Moving Jams ................... 314
  11.3 Features of Foreign Wide Moving Jams .............................. 316
  11.4 Conclusions .............................................................. 318

12 Empirical Features
   of Moving Jam Emergence .................................................. 321
  12.1 Introduction .............................................................. 321
  12.2 Pinch Effect in Synchronized Flow .................................. 321
      12.2.1 Narrow Moving Jam Emergence ................................. 323
      12.2.2 Wide Moving Jam Emergence ($S \rightarrow J$ Transition) .... 328
      12.2.3 Correlation of Characteristics for Pinch Region
            and Wide Moving Jams .......................................... 332
      12.2.4 Frequency of Narrow Moving Jam Emergence ............... 332
      12.2.5 Saturation and Dynamic Features of Pinch Effect .......... 334
      12.2.6 Spatial Dependence of Speed Correlation Function ...... 335
12.2.7 Effect of Wide Moving Jam Emergence in Pinch Region of General Pattern .............. 337
12.3 Strong and Weak Congestion ............................................ 337
12.4 Moving Jam Emergence in Synchronized Flow Away from Bottlenecks .................. 340
12.5 Pattern Formation at Off-Ramp Bottlenecks ........................................... 343
12.6 Induced F→J Transition ...................................................... 344
12.7 Conclusions ................................................................. 348

13 Empirical Pattern Evolution and Transformation at Isolated Bottlenecks ...................... 349
13.1 Introduction ................................................................. 349
13.2 Evolution of General Patterns at On-Ramp Bottlenecks ........................................ 350
  13.2.1 Transformation of General Pattern into Synchronized Flow Pattern .................. 350
  13.2.2 Alternation of Free Flow and Synchronized Flow in Congested Patterns .............. 350
  13.2.3 Hysteresis Effects Due to Pattern Formation and Dissolution ......................... 352
13.3 Transformations of Congested Patterns Under Weak Congestion ............................. 354
13.4 Discharge Flow Rate and Capacity Drop ................................................. 357
13.5 Conclusions ................................................................. 363

14 Empirical Complex Pattern Formation Caused by Peculiarities of Freeway Infrastructure .................. 365
14.1 Introduction ................................................................. 365
14.2 Expanded Congested Pattern .................................................. 366
  14.2.1 Common Features ....................................................... 366
  14.2.2 Example of Expanded Congested Pattern ......................................... 367
14.3 Dissolution of Moving Jams at Bottlenecks ................................................. 369
  14.3.1 Dynamics of Wide Moving Jam Outflow .......................................... 369
  14.3.2 Localized Synchronized Flow Patterns Resulting from Moving Jam Dissolution ...... 371
14.4 Conclusions ................................................................. 372

15 Dependence of Empirical Fundamental Diagram on Congested Pattern Features .................. 373
15.1 Introduction ................................................................. 373
  15.1.1 Empirical Fundamental Diagram and Steady State Model Solutions .................. 373
  15.1.2 Two Branches of Empirical Fundamental Diagram .................................. 374
  15.1.3 Line J and Wide Moving Jam Outflow ............................................. 375
XIV  Contents

15.2 Empirical Fundamental Diagram and Line $J$ ................................. 378
  15.2.1 Asymptotic Behavior of Empirical Fundamental Diagrams .......... 378
  15.2.2 Influence of Different Vehicle Characteristics on Fundamental Diagrams .......... 383
15.3 Dependence of Empirical Fundamental Diagram on Congested Pattern Type ................. 385
15.4 Explanation of Reversed-$\lambda$, Inverted-V, and Inverted-U Empirical Fundamental Diagrams .......... 392
15.5 Conclusions ................................. 394

Part III Microscopic Three-Phase Traffic Theory

16 Microscopic Traffic Flow Models for Spatiotemporal Congested Patterns ................. 399
  16.1 Introduction ........................................ 399
  16.2 Cellular Automata Approach to Three-Phase Traffic Theory ................. 401
    16.2.1 General Rules of Vehicle Motion ........................................ 401
    16.2.2 Synchronization Distance ........................................ 402
    16.2.3 Steady States ........................................ 403
    16.2.4 Fluctuations of Acceleration and Deceleration in Cellular Automata Models .......... 405
    16.2.5 Boundary Conditions and Model of On-Ramp ........................................ 407
    16.2.6 Summary of Model Equations and Parameters ........................................ 408
  16.3 Continuum in Space Model Approach to Three-Phase Traffic Theory ................. 408
    16.3.1 Vehicle Motion Rules ........................................ 408
    16.3.2 Speed Adaptation Effect Within Synchronization Distance ........................................ 409
    16.3.3 Motion State Model for Random Acceleration and Deceleration ........................................ 411
    16.3.4 Safe Speed ........................................ 413
    16.3.5 2D Region of Steady States ........................................ 414
    16.3.6 Physics of Driver Time Delays ........................................ 415
    16.3.7 Over-Acceleration and Over-Deceleration Effects ........................................ 419
    16.3.8 Lane Changing Rules ........................................ 420
    16.3.9 Boundary Conditions and Models of Bottlenecks ........................................ 421
    16.3.10 Summary of Model Equations and Parameters ........................................ 425
  16.4 Conclusions ........................................ 431

17 Microscopic Theory of Phase Transitions in Freeway Traffic ........................................ 433
  17.1 Introduction ........................................ 433
17.2 Microscopic Theory of Breakdown Phenomenon
   (F→S Transition) ........................................ 434
17.2.1 Homogeneous Road .................................. 434
17.2.2 Breakdown Phenomenon at On-Ramp Bottlenecks .... 438

17.3 Moving Jam Emergence and Double Z-Shaped
   Characteristics of Traffic Flow ........................... 442
17.3.1 F→J Transition on Homogeneous Road ............... 442
17.3.2 S→J Transition on Homogeneous Road ............... 443
17.3.3 Moving Jam Emergence in Synchronized
   Flow Upstream of Bottlenecks ............................ 445

17.4 Conclusions ............................................. 448

18 Congested Patterns at Isolated Bottlenecks ............. 449
18.1 Introduction ............................................ 449
18.2 Diagram of Congested Patterns
   at Isolated On-Ramp Bottlenecks ........................ 450
18.2.1 Synchronized Flow Patterns .......................... 450
18.2.2 Single Vehicle Characteristics in Synchronized Flow . 454
18.2.3 Maximum Freeway Capacities
   and Limit Point in Diagram ................................ 458
18.2.4 Pinch Effect in General Patterns ..................... 458
18.2.5 Peculiarities of General Patterns ..................... 462
18.3 Weak and Strong Congestion
   in General Patterns ....................................... 464
18.3.1 Criteria for Strong and Weak Congestion ............... 464
18.3.2 Strong Congestion Features ........................... 467
18.4 Evolution of Congested Patterns
   at On-Ramp Bottlenecks .................................... 469
18.5 Hysteresis and Nucleation Effects by Pattern
   Formation at On-Ramp Bottlenecks ....................... 471
18.5.1 Threshold Boundary for Synchronized Flow Patterns .... 471
18.5.2 Threshold Boundary for General Patterns .............. 475
18.5.3 Overlap of Different Metastable Regions
   and Multiple Pattern Excitation ......................... 476
18.6 Strong Congestion at Merge Bottlenecks ................ 477
18.6.1 Comparison of General Patterns at Merge Bottleneck
   and at On-Ramp Bottleneck .............................. 477
18.6.2 Diagram of Congested Patterns ....................... 478
18.7 Weak Congestion at Off-Ramp Bottlenecks ............... 480
18.7.1 Diagram of Congested Patterns ....................... 480
18.7.2 Comparison of Pattern Features
   at Various Bottlenecks ................................... 480
18.8 Congested Pattern Capacity
   at On-Ramp Bottlenecks .................................. 483
18.8.1 Transformations of Congested Patterns at On-Ramp Bottlenecks .......................... 483
18.8.2 Temporal Evolution of Discharge Flow Rate .................................................. 486
18.8.3 Dependence of Congested Pattern Capacity on On-Ramp Inflow ......................... 490
18.9 Conclusions .............................................................................................................. 492

19 Complex Congested Pattern Interaction and Transformation ........................................ 495
19.1 Introduction ................................................................................................................. 495
19.2 Catch Effect and Induced Congested Pattern Formation ............................................ 496
19.2.1 Induced Pattern Emergence .................................................................................. 496
19.3 Complex Congested Patterns and Pattern Interaction ................................................ 498
19.3.1 Foreign Wide Moving Jams ................................................................................ 498
19.3.2 Expanded Congested Patterns ............................................................................. 501
19.4 Intensification of Downstream Congestion Due to Upstream Congestion .................... 504
19.5 Conclusions ................................................................................................................. 507

20 Spatiotemporal Patterns in Heterogeneous Traffic Flow .............................................. 509
20.1 Introduction ................................................................................................................. 509
20.2 Microscopic Two-Lane Model for Heterogeneous Traffic Flow with Various Driver Behavioral Characteristics and Vehicle Parameters ................................................. 510
   20.2.1 Single-Lane Model ............................................................................................... 510
   20.2.2 Two-Lane Model ............................................................................................... 512
   20.2.3 Boundary, Initial Conditions, and Model of Bottleneck .................................. 514
   20.2.4 Simulation Parameters ...................................................................................... 515
20.3 Patterns in Heterogeneous Traffic Flow with Different Driver Behavioral Characteristics ................................................................. 515
   20.3.1 Vehicle Separation Effect in Free Flow .............................................................. 515
   20.3.2 Onset of Congestion in Free Flow on Homogeneous Road ............................... 516
   20.3.3 Lane Asymmetric Emergence of Moving Synchronized Flow Patterns .............. 519
   20.3.4 Congested Patterns at On-Ramp Bottlenecks .................................................... 519
   20.3.5 Wide Moving Jam Propagation ....................................................................... 525
20.4 Patterns in Heterogeneous Traffic Flow with Different Vehicle Parameters .................. 528
   20.4.1 Peculiarity of Wide Moving Jam Propagation ................................................. 530
   20.4.2 Partial Destroying of Speed Synchronization .................................................... 533
21.4.3 Extension of Free Flow Recovering and Vehicle Separation

20.5 Weak Heterogeneous Flow

20.5.1 Spontaneous Onset of Congestion Away from Bottlenecks

20.5.2 Lane Asymmetric Free Flow Distributions

20.6 Characteristics of Congested Pattern Propagation in Heterogeneous Traffic Flow

20.6.1 Velocity of Downstream Jam Front

20.6.2 Flow Rate in Jam Outflow

20.6.3 Velocity of Downstream Front of Moving Synchronized Flow Patterns

20.7 Conclusions

Part IV Engineering Applications

21 ASDA and FOTO Models of Spatiotemporal Pattern Dynamics based on Local Traffic Flow Measurements

21.1 Introduction

21.2 Identification of Traffic Phases

21.3 Determination of Traffic Phases with FOTO Model

21.4 Tracking Moving Jams with ASDA:

21.4.1 Tracking Synchronized Flow with FOTO Model

21.4.2 ASDA-Like Approach to Tracking Synchronized Flow

21.4.3 Cumulative Flow Rate Approach to Tracking Synchronized Flow

21.5 Conclusions

22 Spatiotemporal Pattern Recognition, Tracking, and Prediction

22.1 Introduction

22.2 FOTO and ASDA Application for Congested Pattern Recognition and Tracking

22.2.1 Validation of FOTO and ASDA Models at Traffic Control Center of German Federal State of Hessen

22.2.2 Application of FOTO and ASDA Models on Other Freeways in Germany and USA

22.3 Spatiotemporal Pattern Prediction

22.3.1 Historical Time Series
22.3.2 Database of Reproducible and Predictable Spatiotemporal Pattern Features .................................. 575
22.3.3 Vehicle Onboard Autonomous Spatiotemporal Congested Pattern Prediction ................................. 580
22.4 Traffic Analysis and Prediction in Urban Areas ................. 582
  22.4.1 Model for Traffic Prediction in City Networks ......... 582
  22.5 Conclusions .................................................. 589

23 Control of Spatiotemporal Congested Patterns ............. 591
  23.1 Introduction .................................................. 591
  23.2 Scenarios for Traffic Management and Control ............ 592
  23.3 Spatiotemporal Pattern Control
     Through Ramp Metering ....................................... 593
     23.3.1 Free Flow Control Approach ............................ 595
     23.3.2 Congested Pattern Control Approach ................. 606
     23.3.3 Comparison of Free Flow and Congested Pattern Control Approaches ................................... 610
     23.3.4 Comparison of Different Control Rules
            in Congested Pattern Control Approach ............... 614
  23.4 Dissolution of Congested Patterns .......................... 617
  23.5 Prevention of Induced Congestion .......................... 620
  23.6 Influence of Automatic Cruise Control
     on Congested Patterns .......................................... 624
     23.6.1 Model of Automatic Cruise Control .................... 624
     23.6.2 Automatic Cruise Control
            with Quick Dynamic Adaptation ....................... 626
     23.6.3 Automatic Cruise Control
            with Slow Dynamic Adaptation ....................... 628
  23.7 Conclusions .................................................. 629

24 Conclusion ....................................................... 631

A Terms and Definitions ........................................ 633
  A.1 Traffic States, Parameters, and Variables .................. 633
  A.2 Traffic Phases ............................................... 633
  A.3 Phase Transitions .......................................... 634
  A.4 Bottleneck Characteristics ................................ 635
  A.5 Congested Patterns at Bottlenecks .......................... 636
  A.6 Local Perturbations ........................................ 637
  A.7 Critical and Threshold Traffic Variables .................. 637
  A.8 Some Features of Phase Transitions
     and Traffic State Stability .................................. 638
B  ASDA and FOTO Models
   for Practical Applications .................................. 641
   B.1  ASDA Model for Several Road Detectors ................. 641
       B.1.1  Extensions of ASDA for On-Ramps, Off-Ramps,
               and Changing of Number of Freeway Lanes
               Upstream of Moving Jam .............................. 643
       B.1.2  Extensions of ASDA for On-Ramps, Off-Ramps,
               and Changing of Number of Freeway Lanes
               Downstream of Moving Jam ............................ 645
       B.1.3  FOTO Model for Several Road Detectors ............... 646
       B.1.4  Extended Rules for FOTO Model ........................ 646
   B.2  Statistical Evaluation of Different
       Reduced Detector Configurations ........................... 651

References .......................................................... 655
