1 Introduction .............................................. 1

Part I Historical Overview
and Three-Phase Traffic Theory

2 Spatiotemporal Pattern Formation
in Freeway Traffic ........................................ 13
  2.1 Introduction ........................................ 13
  2.2 Traffic and Synergetics .............................. 14
  2.3 Free and Congested Traffic .......................... 15
     2.3.1 Local Measurements of Traffic Variables .... 15
     2.3.2 Examples of Freeway Infrastructures
          and Detector Arrangements ...................... 17
     2.3.3 Free Traffic Flow ................................ 18
     2.3.4 Congested Traffic ............................. 21
     2.3.5 Empirical Fundamental Diagram ................. 22
     2.3.6 Complex Local Dynamics of Congested Traffic .. 24
  2.4 Main Empirical Features of Spatiotemporal
     Congested Patterns ................................. 27
     2.4.1 Three Traffic Phases ............................ 27
     2.4.2 Characteristic Parameters of Wide Moving Jams  . 28
     2.4.3 Spontaneous Breakdown Phenomenon
          (Spontaneous F→S Transition) .................. 32
     2.4.4 Induced Breakdown Phenomenon .................. 34
     2.4.5 Synchronized Flow Patterns ..................... 35
     2.4.6 Catch Effect ..................................... 37
     2.4.7 Moving Jam Emergence in Synchronized Flow:
          General Pattern .................................. 41
     2.4.8 Expanded Congested Patterns .................... 46
     2.4.9 Foreign Wide Moving Jams ....................... 51
     2.4.10 Reproducible and Predictable Congested Patterns .. 53
     2.4.11 Methodology for Empirical Congested Pattern Study . 57
  2.5 Conclusions, Fundamental Empirical Features
     of Spatiotemporal Congested Patterns ................. 58
3 Overview of Freeway Traffic Theories and Models: Fundamental Diagram Approach ............ 63

3.1 Introduction:
Hypothesis About Theoretical Fundamental Diagram ........ 63

3.2 Achievements of Fundamental Diagram Approach to Traffic Flow Modeling and Theory ..................... 64
3.2.1 Conservation of Vehicle Number on Road and Front Velocity ............................................ 66
3.2.2 The Lighthill–Whitham–Richards Model and Shock Wave Theory ................................. 67
3.2.3 Collective Flow Concept and Probability of Passing .............................................. 68
3.2.4 Scenarios for Moving Jam Emergence ............... 69
3.2.5 Wide Moving Jam Characteristics ............... 69
3.2.6 Flow Rate in Wide Moving Jam Outflow.
The Line $J$ ....................................... 71
3.2.7 Metastable States of Free Flow with Respect to Moving Jam Emergence ............... 73

3.3 Drawbacks of Fundamental Diagram Approach in Describing of Spatiotemporal Congested Freeway Patterns .................................................. 78
3.3.1 Shock Wave Theory ............................................ 78
3.3.2 Models and Theories of Moving Jam Emergence in Free Flow ........................................... 80
3.3.3 Models and Theories with Variety of Vehicle and Driver Characteristics ......................... 83
3.3.4 Application of Classical Queuing Theories to Freeway Congested Traffic Patterns ...................... 84

3.4 Conclusions ............................................ 85

4 Basis of Three-Phase Traffic Theory ................. 87
4.1 Introduction and Remarks on Three-Phase Traffic Theory ...................................................... 87

4.2 Definition of Traffic Phases in Congested Traffic Based on Empirical Data ............................. 88
4.2.1 Objective Criteria for Traffic Phases in Congested Traffic .............................................. 88
4.2.2 Explanation of Terms “Synchronized Flow” and “Wide Moving Jam” ............................... 90
4.2.3 Mean Vehicle Trajectories ............................................ 91
4.2.4 Flow Rate in Synchronized Flow ....................... 91
4.2.5 Empirical Line $J$ ............................................ 93
4.2.6 Propagation of Two Wide Moving Jams ............... 94

4.3 Fundamental Hypothesis of Three-Phase Traffic Theory ............................................. 95

    8.3.3 Threshold Boundary for Speed Breakdown ............ 223
    8.3.4 Features of Freeway Capacity at Bottlenecks ........ 226
  8.4 Z-Characteristic and Probability for Speed Breakdown ........ 228
  8.5 Congested Pattern Capacity at Bottlenecks .................. 232
  8.6 Main Behavioral Assumptions of Three-Phase Traffic Theory .......... 234
  8.7 Conclusions ........................................... 237

Part II Empirical Spatiotemporal Congested Traffic Patterns

9 Empirical Congested Patterns at Isolated Bottlenecks .............. 241
  9.1 Introduction ........................................ 241
  9.2 Effectual Bottlenecks and Effective Locations of Bottlenecks .......... 242
    9.2.1 Effectual Bottlenecks on Freeway A5-South ......... 244
    9.2.2 Effectual Bottlenecks on Freeway A5-North ........ 247
    9.2.3 Isolated Effectual Bottleneck ....................... 247
  9.3 Empirical Synchronized Flow Patterns ..................... 250
    9.3.1 Widening Synchronized Flow Pattern ................. 250
    9.3.2 Localized Synchronized Flow Pattern ............... 255
    9.3.3 Moving Synchronized Flow Pattern .................. 256
  9.4 Empirical General Patterns .......................... 259
    9.4.1 Empirical General Pattern of Type (1) ............ 259
    9.4.2 Empirical General Pattern of Type (2) ............ 262
    9.4.3 Dependence of Effective Location of Bottleneck on Time ........ 264
  9.5 Conclusions ........................................... 268

10 Empirical Breakdown Phenomenon: Phase Transition from Free Flow to Synchronized Flow ........................................ 269
  10.1 Introduction ........................................ 269
  10.2 Spontaneous Breakdown Phenomenon (Spontaneous F→S Transition) at On-Ramp Bottlenecks .... 270
10.3 Probability for F→S Transition ........................................ 274
  10.3.1 Empirical and Theoretical Definitions
      of Freeway Capacities at Bottlenecks ....................... 275
  10.3.2 Pre-Discharge Flow Rate .................................... 278
10.4 Induced Speed Breakdown
    at On-Ramp Bottlenecks ....................................... 281
  10.4.1 F→S Transition Induced by Wide Moving Jam
      Propagation Through Effectual Bottleneck ................. 282
  10.4.2 Induced Speed Breakdown at Bottlenecks
      Caused by Synchronized Flow Propagation ................. 282
10.5 Breakdown Phenomenon at Off-Ramp Bottlenecks ............ 285
10.6 Breakdown Phenomenon Away from Bottlenecks ............... 289
10.7 Some Empirical Features of Synchronized Flow ............ 294
  10.7.1 Complex Behavior in Flow–Density Plane ............... 294
  10.7.2 Three Types of Synchronized Flow ....................... 296
  10.7.3 Overlapping States of Free Flow
      and Synchronized Flow in Density ......................... 299
  10.7.4 Analysis of Individual Vehicle Speeds ................. 302
10.8 Conclusions ................................................... 302

11 Empirical Features
   of Wide Moving Jam Propagation .................................. 305
11.1 Introduction .................................................... 305
11.2 Characteristic Parameters of Wide Moving Jams ............ 305
  11.2.1 Empirical Determination of Line $J$ .................... 306
  11.2.2 Dependence of Characteristic Jam Parameters
      on Traffic Conditions ....................................... 310
  11.2.3 Propagation of Wide Moving Jams
      Through Synchronized Flow ................................. 311
  11.2.4 Moving Blanks Within Wide Moving Jams ............... 314
11.3 Features of Foreign Wide Moving Jams ....................... 316
11.4 Conclusions ................................................... 318

12 Empirical Features
   of Moving Jam Emergence ............................................ 321
12.1 Introduction .................................................... 321
12.2 Pinch Effect in Synchronized Flow ........................... 321
  12.2.1 Narrow Moving Jam Emergence ......................... 323
  12.2.2 Wide Moving Jam Emergence (S→J Transition) .......... 328
  12.2.3 Correlation of Characteristics for Pinch Region
      and Wide Moving Jams ....................................... 332
  12.2.4 Frequency of Narrow Moving Jam Emergence .......... 332
  12.2.5 Saturation and Dynamic Features of Pinch Effect ...... 334
  12.2.6 Spatial Dependence of Speed Correlation Function ... 335
12.2.7 Effect of Wide Moving Jam Emergence in Pinch Region of General Pattern 337
12.3 Strong and Weak Congestion 337
12.4 Moving Jam Emergence in Synchronized Flow Away from Bottlenecks 340
12.5 Pattern Formation at Off-Ramp Bottlenecks 343
12.6 Induced F→J Transition 344
12.7 Conclusions 348

13 Empirical Pattern Evolution and Transformation at Isolated Bottlenecks 349
13.1 Introduction 349
13.2 Evolution of General Patterns at On-Ramp Bottlenecks 350
  13.2.1 Transformation of General Pattern into Synchronized Flow Pattern 350
  13.2.2 Alternation of Free Flow and Synchronized Flow in Congested Patterns 350
  13.2.3 Hysteresis Effects Due to Pattern Formation and Dissolution 352
13.3 Transformations of Congested Patterns Under Weak Congestion 354
13.4 Discharge Flow Rate and Capacity Drop 357
13.5 Conclusions 363

14 Empirical Complex Pattern Formation Caused by Peculiarities of Freeway Infrastructure 365
14.1 Introduction 365
  14.2 Expanded Congested Pattern 366
    14.2.1 Common Features 366
    14.2.2 Example of Expanded Congested Pattern 367
14.3 Dissolution of Moving Jams at Bottlenecks 369
  14.3.1 Dynamics of Wide Moving Jam Outflow 369
  14.3.2 Localized Synchronized Flow Patterns Resulting from Moving Jam Dissolution 371
14.4 Conclusions 372

15 Dependence of Empirical Fundamental Diagram on Congested Pattern Features 373
15.1 Introduction 373
  15.1.1 Empirical Fundamental Diagram and Steady State Model Solutions 373
  15.1.2 Two Branches of Empirical Fundamental Diagram 374
  15.1.3 Line J and Wide Moving Jam Outflow 375
XIV Contents

15.2 Empirical Fundamental Diagram
   and Line $J$  ............................................ 378
   15.2.1 Asymptotic Behavior of Empirical
          Fundamental Diagrams ............................ 378
   15.2.2 Influence of Different Vehicle Characteristics
          on Fundamental Diagrams ......................... 383
15.3 Dependence of Empirical Fundamental Diagram
       on Congested Pattern Type ....................... 385
15.4 Explanation of Reversed-$\lambda$, Inverted-V,
       and Inverted-U Empirical Fundamental Diagrams ... 392
15.5 Conclusions ........................................ 394

Part III Microscopic Three-Phase Traffic Theory

16 Microscopic Traffic Flow Models
   for Spatiotemporal Congested Patterns ............... 399
   16.1 Introduction ...................................... 399
   16.2 Cellular Automata Approach to Three-Phase Traffic Theory . 401
       16.2.1 General Rules of Vehicle Motion ....... 401
       16.2.2 Synchronization Distance ................. 402
       16.2.3 Steady States ............................... 403
       16.2.4 Fluctuations of Acceleration and Deceleration
              in Cellular Automata Models ................. 405
       16.2.5 Boundary Conditions and Model of On-Ramp .... 407
       16.2.6 Summary of Model Equations and Parameters ... 408
   16.3 Continuum in Space Model Approach
       to Three-Phase Traffic Theory ................. 408
       16.3.1 Vehicle Motion Rules .................... 408
       16.3.2 Speed Adaptation Effect Within Synchronization
              Distance ...................................... 409
       16.3.3 Motion State Model for Random Acceleration
              and Deceleration .............................. 411
       16.3.4 Safe Speed ................................. 413
       16.3.5 2D Region of Steady States ............... 414
       16.3.6 Physics of Driver Time Delays ............ 415
       16.3.7 Over-Acceleration and Over-Deceleration Effects ... 419
       16.3.8 Lane Changing Rules ...................... 420
       16.3.9 Boundary Conditions and Models of Bottlenecks ... 421
       16.3.10 Summary of Model Equations and Parameters ... 425
   16.4 Conclusions ...................................... 431

17 Microscopic Theory of Phase Transitions
   in Freeway Traffic .................................. 433
   17.1 Introduction ..................................... 433
XVI Contents

18.8.1 Transformations of Congested Patterns at On-Ramp Bottlenecks .......................... 483
18.8.2 Temporal Evolution of Discharge Flow Rate .................................................. 486
18.8.3 Dependence of Congested Pattern Capacity on On-Ramp Inflow .......................... 490
18.9 Conclusions ........................................................................................................... 492

19 Complex Congested Pattern Interaction and Transformation ......................................... 495
19.1 Introduction ............................................................................................................ 495
19.2 Catch Effect and Induced Congested Pattern Formation .......................................... 496
   19.2.1 Induced Pattern Emergence ........................................................................... 496
19.3 Complex Congested Patterns and Pattern Interaction .............................................. 498
   19.3.1 Foreign Wide Moving Jams ........................................................................... 498
   19.3.2 Expanded Congested Patterns ....................................................................... 501
19.4 Intensification of Downstream Congestion Due to Upstream Congestion .................. 504
19.5 Conclusions ............................................................................................................ 507

20 Spatiotemporal Patterns in Heterogeneous Traffic Flow .............................................. 509
20.1 Introduction ............................................................................................................ 509
20.2 Microscopic Two-Lane Model for Heterogeneous Traffic Flow with Various Driver Behavioral Characteristics and Vehicle Parameters ................................................. 510
   20.2.1 Single-Lane Model ....................................................................................... 510
   20.2.2 Two-Lane Model ......................................................................................... 512
   20.2.3 Boundary, Initial Conditions, and Model of Bottleneck ................................. 514
   20.2.4 Simulation Parameters .................................................................................. 515
20.3 Patterns in Heterogeneous Traffic Flow with Different Driver Behavioral Characteristics ................................................. 515
   20.3.1 Vehicle Separation Effect in Free Flow ....................................................... 515
   20.3.2 Onset of Congestion in Free Flow on Homogeneous Road .............................. 516
   20.3.3 Lane Asymmetric Emergence of Moving Synchronized Flow Patterns .............. 519
   20.3.4 Congested Patterns at On-Ramp Bottlenecks ............................................... 519
   20.3.5 Wide Moving Jam Propagation .................................................................... 525
20.4 Patterns in Heterogeneous Traffic Flow with Different Vehicle Parameters .................. 528
   20.4.1 Peculiarity of Wide Moving Jam Propagation .............................................. 530
   20.4.2 Partial Destroying of Speed Synchronization ............................................... 533
20.4.3 Extension of Free Flow Recovering and Vehicle Separation ................................. 533
20.5 Weak Heterogeneous Flow .................................................. 535
  20.5.1 Spontaneous Onset of Congestion Away from Bottlenecks ................................. 535
  20.5.2 Lane Asymmetric Free Flow Distributions ...................................................... 537
20.6 Characteristics of Congested Pattern Propagation in Heterogeneous Traffic Flow ........ 538
  20.6.1 Velocity of Downstream Jam Front .......................................................... 538
  20.6.2 Flow Rate in Jam Outflow ........................................................................ 540
  20.6.3 Velocity of Downstream Front of Moving Synchronized Flow Patterns .............. 541
20.7 Conclusions ......................................................................................... 542

Part IV Engineering Applications

21 ASDA and FOTO Models of Spatiotemporal Pattern Dynamics based on Local Traffic Flow Measurements .......................................................... 547
  21.1 Introduction ......................................................................................... 547
  21.2 Identification of Traffic Phases .......................................................... 548
  21.3 Determination of Traffic Phases with FOTO Model .............................. 550
    21.3.1 Fuzzy Rules for FOTO Model ...................................................... 551
  21.4 Tracking Moving Jams with ASDA: Simplified Discussion ....................... 554
    21.4.1 Tracking Synchronized Flow with FOTO Model ......................... 557
    21.4.2 ASDA-Like Approach to Tracking Synchronized Flow ................. 559
    21.4.3 Cumulative Flow Rate Approach to Tracking Synchronized Flow .......... 560
  21.5 Conclusions ......................................................................................... 561

22 Spatiotemporal Pattern Recognition, Tracking, and Prediction ................................. 563
  22.1 Introduction ......................................................................................... 563
  22.2 FOTO and ASDA Application for Congested Pattern Recognition and Tracking .......... 563
    22.2.1 Validation of FOTO and ASDA Models at Traffic Control Center of German Federal State of Hessen ................................................................. 563
    22.2.2 Application of FOTO and ASDA Models on Other Freeways in Germany and USA .......... 565
  22.3 Spatiotemporal Pattern Prediction ......................................................... 568
    22.3.1 Historical Time Series .................................................................. 568
22.3.2 Database of Reproducible and Predictable Spatiotemporal Pattern Features 575
22.3.3 Vehicle Onboard Autonomous Spatiotemporal Congested Pattern Prediction 580

22.4 Traffic Analysis and Prediction in Urban Areas 582
22.4.1 Model for Traffic Prediction in City Networks 582
22.5 Conclusions 589

23 Control of Spatiotemporal Congested Patterns 591
23.1 Introduction 591
23.2 Scenarios for Traffic Management and Control 592
23.3 Spatiotemporal Pattern Control Through Ramp Metering 593
23.3.1 Free Flow Control Approach 595
23.3.2 Congested Pattern Control Approach 606
23.3.3 Comparison of Free Flow and Congested Pattern Control Approaches 610
23.3.4 Comparison of Different Control Rules in Congested Pattern Control Approach 614
23.4 Dissolution of Congested Patterns 617
23.5 Prevention of Induced Congestion 620
23.6 Influence of Automatic Cruise Control on Congested Patterns 624
23.6.1 Model of Automatic Cruise Control 624
23.6.2 Automatic Cruise Control with Quick Dynamic Adaptation 626
23.6.3 Automatic Cruise Control with Slow Dynamic Adaptation 628
23.7 Conclusions 629

24 Conclusion 631

A Terms and Definitions 633
A.1 Traffic States, Parameters, and Variables 633
A.2 Traffic Phases 633
A.3 Phase Transitions 634
A.4 Bottleneck Characteristics 635
A.5 Congested Patterns at Bottlenecks 636
A.6 Local Perturbations 637
A.7 Critical and Threshold Traffic Variables 637
A.8 Some Features of Phase Transitions and Traffic State Stability 638
The Physics of Traffic
Empirical Freeway Pattern Features, Engineering Applications, and Theory
