<b>Introduction</b> .....	1	<b>1.5 Water Deficiency (Drought)</b> ..	117
<b>Chapter 1</b>		1.5.1 Water Balance of Drought-Stressed	
<b>Stress Physiology</b> .....	5	Cells .....	119
<b>1.1 Environment as Stress Factor: Stress Physiology of Plants</b> ..	7	1.5.2 Cellular Reactions to Drought Stress	123
1.1.1 Abiotic and Biotic Environments		1.5.3 CAM	
Cause Stress .....	7	(Crassulacean Acid Metabolism) ...	135
1.1.2 Specific and Unspecific Reactions to Stress .....	9	1.5.4 Anatomical-Morphological Adaptation to Drought .....	140
1.1.3 Stress Concepts .....	11	<b>1.6 Salt Stress (Osmotic Stress)</b> ..	145
1.1.4 Perception of Stress and Creation of Signals .....	13	1.6.1 Physiological Effects of Salt Stress (NaCl) .....	146
1.1.5 How to Measure Stress on Plants? ..	16	1.6.2 Adaptive Responses of Plant Cells to Salt Stress .....	149
1.1.6 Production of Stress-Tolerant Plants by Genetic Engineering? .....	16	1.6.3 Avoidance of Salt Stress .....	171
1.1.7 Gene Silencing .....	19	<b>1.7 Heavy Metals</b> .....	175
<b>1.2 Light</b> .....	23	1.7.1 Availability of Heavy Metals .....	176
1.2.1 Visible Light .....	24	1.7.2 Heavy Metal Deficiency – Example	
1.2.2 UV Radiation .....	37	Iron .....	176
<b>1.3 Temperature</b> .....	45	1.7.3 Stress by Heavy Metal Ion Toxicity .	182
1.3.1 Temperature Ranges and Temperatures Limiting Life .....	45	1.7.4 Reaction of Plants to Excess Supply of Heavy Metals .....	184
1.3.2 Temperature-Dependent Biochemical Processes, Q <sub>10</sub> and Activation Energy	48	1.7.5 Heavy Metal Resistance (Tolerance)	191
1.3.3 Temperature and Stability/Function of Biomembranes .....	49	1.7.6 Heavy Metal Extraction and Soil Decontamination by Plants (Phytomining, Phytoremediation) ..	191
1.3.4 Heat (Hyperthermy) .....	50	<b>1.8 Aluminium</b> .....	195
1.3.5 Cold .....	61	1.8.1 Forms of Aluminium Available to Plants .....	196
1.3.6 Frost .....	72	1.8.2 Aluminium Toxicity .....	196
1.3.7 Concluding Comments .....	94	1.8.3 Al <sup>3+</sup> Resistance .....	200
<b>1.4 Oxygen Deficiency (Anaerobiosis and Hypoxia)</b> ..	99	1.8.4 Al <sup>3+</sup> Tolerance .....	203
1.4.1 Energy Metabolism of Plants Lacking Oxygen .....	101	<b>1.9 Xenobiotica</b> .....	207
1.4.2 Anatomical-Morphological Changes During Hypoxia .....	105	1.9.1 Herbicides .....	210
1.4.3 Post-anoxic Stress .....	114	1.9.2 Gaseous Air Pollutants .....	215

<b>1.10 Biotic Stress: Herbivory, Infection, Allelopathy</b> . . . . .	235	<b>3.2 Processes in Stands and Ecosystems</b> . . . . .	403
1.10.1 Signal Chain in Wounding . . . . .	235	3.2.1 Self-Thinning . . . . .	403
1.10.2 Pathogen Attack and Defence . . . . .	246	3.2.2 Reversible and Irreversible Site Changes Related to Resource Exploitation . . . . .	406
1.10.3 Allelopathy . . . . .	250	3.2.3 Complexity and Non-linear Behaviour . . . . .	409
<b>Chapter 2</b>		3.2.4 Number of Species and Habitat Partitioning . . . . .	411
<b>Autecology: Whole Plant Ecology</b> . . . . .	253	3.2.5 Disturbances . . . . .	417
<b>2.1 Thermal Balance of Plants</b> . . . . .	255	<b>3.3 The Biogeochemical Cycles</b> . . . . .	425
2.1.1 The Atmosphere as Habitat . . . . .	257	3.3.1 Water Turnover . . . . .	426
2.1.2 Climate of Air Near the Ground . . . . .	263	3.3.2 Carbon Turnover . . . . .	427
2.1.3 Energy Balance of Leaves . . . . .	269	3.3.3 Nitrogen Cycle . . . . .	438
2.1.4 Adaptation to Temperature Extremes . . . . .	270	3.3.4 Cation Turnover . . . . .	444
<b>2.2 Water Relations of Plants</b> . . . . .	277	<b>3.4 Biodiversity and Ecosystem Processes</b> . . . . .	449
2.2.1 Water as an Environmental Factor . . . . .	277	<b>3.5 Case Studies at the Scale of Ecosystems</b> . . . . .	455
2.2.2 Water Transport in the Plant . . . . .	283	3.5.1 Soil Acidification and Forest Damage . . . . .	456
2.2.3 Regulation of Stomata . . . . .	296	3.5.2 Effect of Deciduous and Coniferous Forests on Processes in Ecosystems . . . . .	460
2.2.4 Transpiration of Leaves and Canopies . . . . .	303	3.5.3 Plants of Limestone and Siliceous Rocks . . . . .	462
<b>2.3 Nutrient Relations of Plants</b> . . . . .	313	<b>Chapter 4</b>	
2.3.1 Availability of Soil Nutrients and Ion Uptake . . . . .	313	<b>Syndynamics, Synchorology, Synecology</b> . . . . .	465
2.3.2 Nitrogen Nutrition . . . . .	324	<b>4.1 Historic-Genetic Development of Phytocenoses and Their Dynamics</b> . . . . .	467
2.3.3 Sulfur Nutrition . . . . .	335	4.1.1 History of Vegetation to the End of the Tertiary . . . . .	469
2.3.4 Phosphate Nutrition . . . . .	337	4.1.2 Change of Climate and Vegetation in the Pleistocene . . . . .	472
2.3.5 Nutrition with Alkaline Cations . . . . .	338	4.1.3 Late and Postglacial Climate and Vegetation History . . . . .	475
<b>2.4 Carbon Balance</b> . . . . .	347	4.1.4 Changes in Vegetation Because of Human Influence . . . . .	479
2.4.1 Net Photosynthesis: Physiological and Physical Basis . . . . .	347	4.1.5 Basis of General Vegetation Dynamics . . . . .	507
2.4.2 Specific Leaf Area, Nitrogen Content and Photosynthetic Capacity . . . . .	357	4.1.6 Stability of Plant Communities . . . . .	534
2.4.3 Response of Photosynthesis to Environmental Factors . . . . .	361		
2.4.4 Growth and Storage . . . . .	373		
2.4.5 C and N Balance in Different Types of Plants . . . . .	379		
<b>Chapter 3</b>			
<b>Ecology of Ecosystems</b> . . . . .	397		
<b>3.1 The Ecosystem Concept</b> . . . . .	399		
3.1.1 What is an Ecosystem? . . . . .	400		
3.1.2 Boundaries of Ecosystems . . . . .	400		
3.1.3 Compartmentalisation . . . . .	401		
3.1.4 System Characteristics . . . . .	401		

<b>4.2</b>	<b>Synchorology: Basis of Spatial Distribution of Plants</b> . . . . .	541	5.2.3	Nitrogen Cycle . . . . .	636	
4.2.1	Distribution of Plants . . . . .	542	5.2.4	Sulfur Cycle . . . . .	638	
4.2.2	Basis of Spatial Distribution (Phytogeography) . . . . .	548	<b>5.3</b>	<b>Human Influence on Carbon Balance and Significance for Global Climate</b> . . . . .	641	
4.2.3	Relationship Between Area and Species . . . . .	555	<b>5.4</b>	<b>Significance of Changes in Land Use for Carbon Cycles</b> . .	649	
4.2.4	Biodiversity . . . . .	562	5.4.1	Land Use and CO <sub>2</sub> Emissions . . . . .	649	
<b>4.3</b>	<b>Interactions Between Vegetation and Abiotic and Biotic Environments – Synecology</b> . .	579	5.4.2	The Kyoto Protocol: Attempts To Manage the Global Carbon Cycle . .	651	
4.3.1	Influences of Vegetation on the Site	580	5.4.3	Importance of Climate Change for Europe . . . . .	659	
4.3.2	Interactions Between Plants and Animals . . . . .	585	<b>5.5</b>	<b>Influence of Human Activities on Biodiversity</b> . . . . .	663	
4.3.3	Interactions Between Plants . . . . .	602	5.5.1	Decrease in Biodiversity . . . . .	663	
<b>Chapter 5</b>			<b>5.6</b>	<b>Socio-economic Interactions</b> .	669	
<b>Global Aspects of Plant Ecology</b> . . .			623	5.6.1	Syndromes . . . . .	670
<b>5.1</b>	<b>Global Change and Global Institutions</b> . . . . .	625	5.6.2	Evaluation of Risks to Biodiversity in Ecosystems . . . . .	673	
<b>5.2</b>	<b>Global Material Cycles</b> . . . . .	633	<b>Subject Index</b> . . . . .	679		
5.2.1	Water Cycle . . . . .	633				
5.2.2	Carbon Cycle . . . . .	635
