Contents

Part I. Classification Methods with Applications

The STP Procedure as Overfitting Avoidance Tool in Classification Trees ........................................ 3
Carmela Cappelli, Francesco Mola

A Modal Symbolic Pattern Classifier .......................... 15
Francisco de A.T. de Carvalho, Renata M.C.R. de Souza, Rosanna Verde

Proximity Measures Between Classification Trees … 27
Rossella Miglio, Gabriele Soffritti

Ordinal Classification Trees Based on Impurity Measures .......................................................... 39
Raffaella Piccarreta

Part II. Time Series Analysis and Related Methods

Space Time Noisy Observation Smoothing ............... 55
Di Giacinto Valter, Ippoliti Luigi, Romagnoli Luca

Spectral Analysis in Frequency and Time Domain for Noisy Time Series .................................... 67
Lara Fontanella, Mariagrazia Granturco

A Resistant Measure of Heteroskedasticity in Explorative Time Series Analysis ............................ 81
Marcella Niglio, Stefano Maria Pagnotta

Part III. Computer Intensive Techniques and Algorithms

Smoothing Score Algorithm for Generalized Additive Models ...................................................... 95
Claudio Conversano
Bootstrap Variable Selection in Neural Network Regression Models ........................................... 109  
  Francesco Giordano, Michele La Rocca, Cira Perna

Robust Centre Location in Radial Basis Function Networks ......................................................... 121  
  Marilena Pillati, Daniela G. Calò

The Genetic Algorithm Estimates for the Parameters of Order $p$ Normal Distributions ............. 133  
  Salvatore Vitrano, Roberto Baragona

Part IV. Classification and Data Analysis in Economics

Non-linear Dynamics in the Industrial Production Index ............................................................... 147  
  Alessandra Amendola, Giuseppe Storti

Tensorial Co-Structure Analysis for the Full Multi Modules Customer Satisfaction Evaluation ........ 159  
  Pietro Amenta, Pasquale Sarnacchiaro

A Proposal of Classification of Wholesale Trade Enterprises on the Base of Structural and Performance Indicators .......................................................... 169  
  Paola Anitori, Carlo De Gregorio

The Analysis of Poverty in Italy: A Fuzzy Dynamic Approach ....................................................... 181  
  Daria Mendola, Stefano De Cantis

Part V. Multivariate Analysis in Applied Sciences

Combining Information from Several Experts: Selecting and Stopping Rules in Sequential Consulting 195  
  Patrizia Agati
A Spatial Clustering Hierarchical Model for Disease Mapping ................................................. 209
  Massimo Bilancia, Alessio Pollice

Second-order Interaction in a Trivariate Generalized Gamma Distribution .................. 219
  Salvatore Bologna, Gianfranco Lovison

Mortality and Air Pollution in Philadelphia: A Dynamic Generalized Linear Modelling Approach ... 233
  Monica Chiogna, Carlo Gaetan

The Multivariate Adaptive Sampling for Estimating the Diversity in Biological Populations .......... 245
  Stefano A. Gattone, Tonio Di Battista

Adjusted Least Square Estimation for Noisy Images ......................................................... 255
  Ippoliti Luigi, Romagnoli Luca

Flexible Dynamic Regression Models for Real-time Forecasting of Air Pollutant Concentration ........ 265
  Pietro Mantovan, Andrea Pastore

Author Index ......................................................... 277

Subject Index ....................................................... 279
Advances in Multivariate Data Analysis
Proceedings of the Meeting of the Classification and Data Analysis Group (CLADAG) of the Italian Statistical Society, University of Palermo, July 5–6, 2001
Bock, H.-H.; Chiodi, M.; Mineo, A. (Eds.)
2004, XI, 281 p., Softcover
