Contents

HYDRAULIC BEHAVIOUR

Laboratory Experiments and Simulations on the Significance of Non-Equilibrium Effect in Capillary Pressure-Saturation Relationship..............3
Hassanizadeh, S. M., Oung, O., and Manthey, S.

Determination of hydro-mechanical Properties of Sand.......................................15
Lins, Y. and Schanz, T.

Column test apparatus for the inverse estimation of soil hydraulic parameters under defined stress condition........................................33
Scheuermann, A., Montenegro, H., and Bieberstein, A.

Water permeability of unsaturated compacted kaolin ..........................................45
Peroni, N., Fratalocchi, E., and Tarantino, A.

Moisture retention curve in landfilled waste ........................................................59
Kazimoglu, Y. K., McDougall, J. R., and Pyrah, I. C.

The pF-curve of fine-grained soils at high pore water suction .............................69
Schick, P.

STRUCTURAL CHARACTERIZATION – MEASUREMENT OF SUCTION

Influence of microstructure on geotechnical properties of clays .........................89
Schmitz, R. M., Schroeder, C., and Charlier, R.

Suction induced by static compaction ................................................................101
Tombolato, S., Tarantino, A., and Mongiovì, L.

Suction of compacted residual soils ...................................................................111
Tripathy, S., Leong, E. C., and Rahardjo, H.

Creation of artificial loess soils .........................................................................123
Zourmpakis, A., Boardman, D. I., and Rogers, C. D. F.

Analysis of the mechanical response of an artificial collapsible soil......... 135
Medero, G.M., Schmaid, F., Gehling, W.Y.Y., and Gallipoli, D.

Fabric Evolution of an Unsaturated Compacted Soil during Hydromechanical loading ..............................................................147
Cuisinier, O. and Laloui, L.
Measurement of osmotic suction using the squeezing technique .......................... 159
*Peroni, N. and Tarantino, A.*

The use of different suction measurement techniques
to determine water retention curves......................................................... 169
*Boso, M., Romero, E., and Tarantino, A.*

Measurement of Suction of Thick Textured Soil
using Filter Paper Method and Equivalent Tensiometer – EQT.................. 183
*Mahler, C. F. and Mendes, C. A. R.*

Laboratory measurement of matric suction in pyroclastic soil
using vacuum and high-suction tensiometers ........................................ 193
*Nicotera, M. V. and Tarantino, A.*

**EXPANSIVE SOILS**

Volume Change Behaviour of Fine Grained Soils ........................................ 209
*Sridharan, A.*

Volume change behaviour of cohesive soils .............................................. 227
*Dobrowolsky, M.*

Swelling Pressures and Wetting-Drying Curves
of a Highly Compacted Bentonite-Sand Mixture ......................................... 241
*Agus, S. S. and Schanz, T.*

Results and interpretation of bentonite resaturation experiments
with liquid water and water vapour ....................................................... 257
*Kröhn, K.-P.*

**MECHANICAL BEHAVIOUR**

Shear strength of unsaturated bentonite buffer material ............................. 273
*Farouk, A., Kos, J., and Lamboj, L.*

Evaluation of Yielding in Unsaturated Clays
Using an Automated Triaxial Apparatus with Controlled Suction ............... 285
*Blatz, J., Anderson, D., Graham, J., and Siemens, G.*

A triaxial device for unsaturated sand – New Developments ..................... 301
*Lauer, C. and Engel, J.*

Undrained Isotropic Compression of Soil .................................................. 315
*Oostveen, J. P.*
Hydro-mechanical behaviour of clayey silt under isotropic compression .......... 331
Buenfil, C., Romero, E., Lloret, A., and Gens, A.

The concept of “apparent” Compression Index.................................................. 343
Bardanis, M. and Kavvadas, M.

Behaviour of unsaturated cohesive soils subjected to cyclic loads............... 355
Becker, Th. and Li, T.

Remarks on consolidation in unsaturated soils from experimental results ........ 373
Ausilio, E. and Conte, E

Prediction and modeling of tensile stresses and shrinkage ......................... 383
Baumgartl, Th.

Tensile Strength of Compacted Clays ................................................................. 395
Heibrock, G., Zeh, R.M., and Witt, K. J.

Fine Fissuring of Clay Fill Materials for Flood Defence Embankments ........... 413
Dyer, M. and Coulson, B.

Laboratory investigation of the virgin drying of the Corinth Marl ............... 421
Bardanis, M. and Kavvadas, M.

APPLICATIONS

From experimental evidence towards the assessment
of weather-related railway embankment hazards........................................... 435
Gitirana, G. Jr. and Fredlund, D. G.

Large scale hill creep in cohesive sediments: A field and model study......... 469
Zehe, E., Lindenmaier, F., and Ihringer, J.

The effect of soil suction in stability of partially submerged slopes............. 483
Bellezza, I. and Fratalocchi, E.

Effects of unsaturation on the stability of a moraine slope......................... 497
Simeoni, L., Tarantino, A., and Mongiovi, L.

A large physical Mock-Up model for investigating engineered barriers ......... 509
Pacovský, J.

Experimental testing and modelling of a Design for HLW Disposal
through a Large Scale Mock-Up ........................................................................ 521
Verstricht, J., Li, X. L., and Bernier, F.
Unsaturated Soils: Experimental Studies
Schanz, T. (Ed.)
2005, XIII, 533 p., Hardcover
ISBN: 978-3-540-21121-1
