## Contents

1 Introduction ................................................................. 1  
1.1 Background ..................................................................... 1  
1.2 Related literature .......................................................... 7  
1.3 How the book is organised .............................................. 7  
1.4 Notation and conventions .............................................. 9  

2 Surfaces in Scrolls ............................................................. 15  
2.1 Rational normal scrolls .................................................. 15  
2.2 Specializing to $K3$ surfaces .......................................... 17  

3 The Clifford index of smooth curves in $|L|$ and the definition of the scrolls $T(c, D, \{D_\lambda\})$ ........................................... 19  
3.1 Gonality and Clifford index of curves ............................. 19  
3.2 The result of Green and Lazarsfeld ............................... 20  
3.3 Clifford divisors ............................................................. 21  
3.4 Getting a scroll .............................................................. 28  

4 Two existence theorems ...................................................... 31  

5 The singular locus of the surface $S'$ and the scroll $T$ ............. 35  
5.1 The singular locus of $\varphi_L(S)$ .................................... 35  
5.2 The singular locus of $T$ and perfect Clifford divisors ............... 36  

6 Postponed proofs ............................................................... 47  

7 Projective models in smooth scrolls ...................................... 59  

8 Projective models in singular scrolls ..................................... 63  
8.1 Blowing up $S$ ............................................................... 64  
8.2 The smooth scroll $T_0$ .................................................. 67  
8.3 Techniques for finding Betti-numbers of the $\varphi_L(D_\lambda)$ ........... 70  
8.4 Resolutions for projective models .................................... 82  
8.4.1 Pushing down resolutions .......................................... 86  
8.5 Rolling factors coordinates ........................................... 89  
8.6 Some examples ............................................................. 92
9 More on projective models in smooth scrolls of $K3$
surfaces of low Clifford-indices 
9.1 Projective models with $c = 1$ 
9.2 Projective models with $c = 2$ 
  9.2.1 An interpretation of $b_1$ and $b_2$ 
  9.2.2 Possible scroll types for $c = 2$ 
9.3 Projective models with $c = 3$ 
9.4 Higher values of $c$

10 $BN$ general and Clifford general $K3$ surfaces 
10.1 The results of Mukai 
10.2 Notions of generality 
10.3 The case $g = 8$ 
10.4 The case $g = 10$

11 Projective models of $K3$ surfaces of low genus 
11.1 A new decomposition of $R$ 
11.2 Perfect Clifford divisors for low $c$ 
11.3 The possible scroll types 
11.4 Some concrete examples 
11.5 The list of projective models of low genus

12 Some applications and open questions 
12.1 $BN$ generality 
12.2 Applications to Calabi-Yau threefolds 
12.3 Analogies with Enriques surfaces
