Preface .......................................................... VII
Motivation ..................................................... VII
Aims, Readership and Book Structure ...................... XII
Final Word and Acknowledgments .......................... XIV
Description of Contents by Chapter ....................... XIX

Abbreviations and Notation ................................. XXXV

Part I. BASIC DEFINITIONS AND NO ARBITRAGE

1. Definitions and Notation ................................. 1
   1.1 The Bank Account and the Short Rate .............. 2
   1.2 Zero-Coupon Bonds and Spot Interest Rates .......... 4
   1.3 Fundamental Interest-Rate Curves .................. 9
   1.4 Forward Rates ..................................... 11
   1.5 Interest-Rate Swaps and Forward Swap Rates ..... 13
   1.6 Interest-Rate Caps/Floors and Swaptions .......... 16

2. No-Arbitrage Pricing and Numeraire Change .......... 23
   2.1 No-Arbitrage in Continuous Time .................. 24
   2.2 The Change-of-Numeraire Technique ................ 26
   2.3 A Change of Numeraire Toolkit
      (Brigo & Mercurio 2001c) .......................... 28
      2.3.1 A helpful notation: “DC” .................... 35
   2.4 The Choice of a Convenient Numeraire ............ 37
   2.5 The Forward Measure ............................... 38
   2.6 The Fundamental Pricing Formulas ................. 39
      2.6.1 The Pricing of Caps and Floors ............ 40
   2.7 Pricing Claims with Deferred Payoffs ............. 42
   2.8 Pricing Claims with Multiple Payoffs ............. 42
   2.9 Foreign Markets and Numeraire Change .......... 44
### Part II. FROM SHORT RATE MODELS TO HJM

3. **One-factor short-rate models** ........................................... 51
   3.1 Introduction and Guided Tour ........................................ 51
   3.2 Classical Time-Homogeneous Short-Rate Models ................. 57
      3.2.1 The Vasicek Model ........................................... 58
      3.2.2 The Dothan Model ........................................... 62
      3.2.3 The Cox, Ingersoll and Ross (CIR) Model .................. 64
      3.2.4 Affine Term-Structure Models .............................. 68
      3.2.5 The Exponential-Vasicek (EV) Model ....................... 70
   3.3 The Hull-White Extended Vasicek Model .......................... 71
      3.3.1 The Short-Rate Dynamics ................................... 72
      3.3.2 Bond and Option Pricing ................................... 75
      3.3.3 The Construction of a Trinomial Tree ..................... 78
   3.4 Possible Extensions of the CIR Model ............................ 80
   3.5 The Black-Karasinski Model ...................................... 82
      3.5.1 The Short-Rate Dynamics ................................... 83
      3.5.2 The Construction of a Trinomial Tree ..................... 85
   3.6 Volatility Structures in One-Factor Short-Rate Models ....... 86
   3.7 Humped-Volatility Short-Rate Models ............................ 92
   3.8 A General Deterministic-Shift Extension ....................... 95
      3.8.1 The Basic Assumptions ..................................... 96
      3.8.2 Fitting the Initial Term Structure of Interest Rates ... 97
      3.8.3 Explicit Formulas for European Options .................. 99
      3.8.4 The Vasicek Case ......................................... 100
   3.9 The CIR++ Model .................................................. 102
      3.9.1 The Construction of a Trinomial Tree ..................... 105
      3.9.2 Early Exercise Pricing via Dynamic Programming ....... 106
      3.9.3 The Positivity of Rates and Fitting Quality ............ 106
      3.9.4 Monte Carlo Simulation .................................... 109
      3.9.5 Jump Diffusion CIR and CIR++ models (JCIR, JCIR++) .... 109
   3.10 Deterministic-Shift Extension of Lognormal Models .......... 110
   3.11 Some Further Remarks on Derivatives Pricing ................... 112
      3.11.1 Pricing European Options on a Coupon-Bearing Bond .... 112
      3.11.2 The Monte Carlo Simulation ............................... 114
      3.11.3 Pricing Early-Exercise Derivatives with a Tree ........ 116
      3.11.4 A Fundamental Case of Early Exercise: Bermudan-
            Style Swaptions. .......................................... 121
   3.12 Implied Cap Volatility Curves .................................. 124
      3.12.1 The Black and Karasinski Model ......................... 125
      3.12.2 The CIR++ Model ......................................... 126
      3.12.3 The Extended Exponential-Vasicek Model ................. 128
   3.13 Implied Swaption Volatility Surfaces .......................... 129
      3.13.1 The Black and Karasinski Model ......................... 130
3.13.2 The Extended Exponential-Vasicek Model ............... 131
3.14 An Example of Calibration to Real-Market Data ........... 132

4. Two-Factor Short-Rate Models .......................... 137
4.1 Introduction and Motivation ................................ 137
4.2 The Two-Additive-Factor Gaussian Model G2++ .......... 142
  4.2.1 The Short-Rate Dynamics ............................ 143
  4.2.2 The Pricing of a Zero-Coupon Bond ................. 144
  4.2.3 Volatility and Correlation Structures in Two-Factor
       Models ........................................ 148
  4.2.4 The Pricing of a European Option on a Zero-Coupon
       Bond .......................................... 153
  4.2.5 The Analogy with the Hull-White Two-Factor Model  . 159
  4.2.6 The Construction of an Approximating Binomial Tree. 162
  4.2.7 Examples of Calibration to Real-Market Data ......... 166
4.3 The Two-Additive-Factor Extended CIR/LS Model CIR2++ 175
  4.3.1 The Basic Two-Factor CIR2 Model ................. 176
  4.3.2 Relationship with the Longstaff and Schwartz Model
       (LS) ............................................ 177
  4.3.3 Forward-Measure Dynamics and Option Pricing for
       CIR2 .......................................... 178
  4.3.4 The CIR2++ Model and Option Pricing ........... 179

5. The Heath-Jarrow-Morton (HJM) Framework .................. 183
5.1 The HJM Forward-Rate Dynamics ........................ 185
5.2 Markovianity of the Short-Rate Process ................... 186
5.3 The Ritchken and Sankarasubramanian Framework ............ 187
5.4 The Mercurio and Moraleda Model ........................ 191

Part III. MARKET MODELS

6. The LIBOR and Swap Market Models (LFM and LSM) .... 195
  6.1 Introduction .......................................... 195
  6.2 Market Models: a Guided Tour .......................... 196
  6.3 The Lognormal Forward-LIBOR Model (LFM) ............ 207
    6.3.1 Some Specifications of the Instantaneous Volatility of
           Forward Rates .................................. 210
    6.3.2 Forward-Rate Dynamics under Different Numeraires .. 213
  6.4 Calibration of the LFM to Caps and Floors Prices ........ 220
    6.4.1 Piecewise-Constant Instantaneous-Volatility Structures 223
    6.4.2 Parametric Volatility Structures .................... 224
    6.4.3 Cap Quotes in the Market .......................... 225
  6.5 The Term Structure of Volatility ........................ 226
    6.5.1 Piecewise-Constant Instantaneous Volatility Structures 228

</table>
7.6.1 Cascade Calibration under Various Correlations and Ranks ........................................ 342
7.6.2 Cascade Calibration Diagnostics: Terminal Correlation and Evolution of Volatilities ............. 346
7.6.3 The interpolation for the swaption matrix and its impact on the CCA ................................ 349
7.7 Empirically efficient Cascade Calibration ................................................................. 351
7.7.1 CCA with Endogenous Interpolation and Based Only on Pure Market Data ......................... 352
7.7.2 Financial Diagnostics of the RCCAEI test results ...................................................... 359
7.7.3 Endogenous Cascade Interpolation for missing swaptions volatilities quotes ....................... 364
7.7.4 A first partial check on the calibrated $\sigma$ parameters stability .................................. 364
7.8 Reliability: Monte Carlo tests ...................................................................................... 366
7.9 Cascade Calibration and the cap market ........................................................................ 369
7.10 Cascade Calibration: Conclusions ................................................................................ 372

8. Monte Carlo Tests for LFM Analytical Approximations .................................................. 377
8.1 First Part. Tests Based on the Kullback Leibler Information (KLI) .................................... 378
8.1.1 Distance between distributions: The Kullback Leibler information ................................. 378
8.1.2 Distance of the LFM swap rate from the lognormal family of distributions ................. 381
8.1.3 Monte Carlo tests for measuring KLI ............................................................................. 384
8.1.4 Conclusions on the KLI-based approach .................................................................. 391
8.2 Second Part: Classical Tests ......................................................................................... 392
8.3 The “Testing Plan” for Volatilities ................................................................................ 392
8.4 Test Results for Volatilities .......................................................................................... 396
8.4.1 Case (1): Constant Instantaneous Volatilities .......................................................... 396
8.4.2 Case (2): Volatilities as Functions of Time to Maturity ............................................... 401
8.4.3 Case (3): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity ................................................................. 410
8.5 The “Testing Plan” for Terminal Correlations ............................................................... 421
8.6 Test Results for Terminal Correlations .......................................................................... 427
8.6.1 Case (i): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Typical Rank-Two Correlations .............................................. 427
8.6.2 Case (ii): Constant Instantaneous Volatilities, Typical Rank-Two Correlations .................. 430
8.6.3 Case (iii): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Some Negative Rank-Two Correlations ............................... 432
8.6.4 Case (iv): Constant Instantaneous Volatilities, Some Negative Rank-Two Correlations .................................. 438
8.6.5 Case (v): Constant Instantaneous Volatilities, Perfect Correlations, Upwardly Shifted $\Phi$’s ......................... 439
8.7 Test Results: Stylized Conclusions .......................... 442

Part IV. THE VOLATILITY SMILE

9. Including the Smile in the LFM .............................. 447
  9.1 A Mini-tour on the Smile Problem ....................... 447
  9.2 Modeling the Smile ...................................... 450

10. Local-Volatility Models ...................................... 453
  10.1 The Shifted-Lognormal Model ........................... 454
  10.2 The Constant Elasticity of Variance Model .......... 456
  10.3 A Class of Analytically-tractable Models ............ 459
  10.4 A Lognormal-Mixture (LM) Model ...................... 463
  10.5 Forward Rates Dynamics under Different Measures .... 467
      10.5.1 Decorrelation Between Underlying and Volatility 469
  10.6 Shifting the LM Dynamics ............................. 469
  10.7 A Lognormal-Mixture with Different Means (LMDM) .... 471
  10.8 The Case of Hyperbolic-Sine Processes ............... 473
  10.9 Testing the Above Mixture-Models on Market Data .... 475
  10.10 A Second General Class ............................... 478
  10.11 A Particular Case: a Mixture of GBM’s ............... 483
  10.12 An Extension of the GBM Mixture Model Allowing for Implied Volatility Skews .................................. 486
  10.13 A General Dynamics à la Dupire (1994) ............... 489

11. Stochastic-Volatility Models ............................... 495
  11.1 The Andersen and Brotherton-Ratcliffe (2001) Model 497
  11.3 The Piterbarg (2003) Model ............................ 504
  11.5 The Joshi and Rebonato (2003) Model .................. 513

12. Uncertain-Parameter Models ............................... 517
  12.1 The Shifted-Lognormal Model with Uncertain Parameters 519
      (SLMUP) ............................................. 519
      12.1.1 Relationship with the Lognormal-Mixture LVM .... 520
  12.2 Calibration to Caplets .................................. 520
  12.3 Swaption Pricing ....................................... 522
  12.4 Monte-Carlo Swaption Pricing .......................... 524
  12.5 Calibration to Swaptions ................................ 526
12.6 Calibration to Market Data ........................................ 528
12.7 Testing the Approximation for Swaptions Prices ............. 530
12.8 Further Model Implications ..................................... 535
12.9 Joint Calibration to Caps and Swaptions ...................... 539

Part V. EXAMPLES OF MARKET PAYOFFS

13. Pricing Derivatives on a Single Interest-Rate Curve .... 547
   13.1 In-Arrears Swaps ........................................... 548
   13.2 In-Arrears Caps ........................................... 550
      13.2.1 A First Analytical Formula (LFM) ................... 550
      13.2.2 A Second Analytical Formula (G2++) ............... 551
   13.3 Autocaps .................................................. 551
   13.4 Caps with Deferred Caplets ................................ 552
      13.4.1 A First Analytical Formula (LFM) ................. 553
      13.4.2 A Second Analytical Formula (G2++) ............... 553
   13.5 Ratchet Caps and Floors .................................. 554
      13.5.1 Analytical Approximation for Ratchet Caps with the
            LFM ........................................... 555
   13.6 Ratchets (One-Way Floaters) .............................. 556
   13.7 Constant-Maturity Swaps (CMS) ........................... 557
      13.7.1 CMS with the LFM ................................... 557
      13.7.2 CMS with the G2++ Model ............................ 559
   13.8 The Convexity Adjustment and Applications to CMS ....... 559
      13.8.1 Natural and Unnatural Time Lags .................... 559
      13.8.2 The Convexity-Adjustment Technique .............. 561
      13.8.3 Deducing a Simple Lognormal Dynamics from the Ad-
            justment ........................................ 565
      13.8.4 Application to CMS .................................. 565
      13.8.5 Forward Rate Resetting Unnaturally and Average-
            Rate Swaps ...................................... 566
   13.9 Average Rate Caps ........................................ 568
   13.10 Captions and Floortions .................................. 570
   13.11 Zero-Coupon Swaptions ................................... 571
   13.12 Eurodollar Futures ...................................... 575
      13.12.1 The Shifted Two-Factor Vasicek G2++ Model ....... 576
      13.12.2 Eurodollar Futures with the LFM .................. 577
   13.13 LFM Pricing with “In-Between” Spot Rates .............. 578
      13.13.1 Accrual Swaps ..................................... 579
      13.13.2 Trigger Swaps ...................................... 582
   13.14 LFM Pricing with Early Exercise and Possible Path Dependence 584
   13.15 LFM: Pricing Bermudan Swaptions ........................ 588
      13.15.1 Least Squared Monte Carlo Approach ............... 589
      13.15.2 Carr and Yang’s Approach ......................... 591
Part VI. INFLATION

15. Pricing of Inflation-Indexed Derivatives .......................... 643
   15.1 The Foreign-Currency Analogy ................................. 644
   15.2 Definitions and Notation ...................................... 645
   15.3 The JY Model .................................................. 646

16. Inflation-Indexed Swaps .............................................. 649
   16.1 Pricing of a ZCIIS ............................................ 649
   16.2 Pricing of a YYIIS ............................................ 651
   16.3 Pricing of a YYIIS with the JY Model ......................... 652
   16.4 Pricing of a YYIIS with a First Market Model ............... 654

22.5 The Filtration Switching Formula: Pricing under partial information ............................................. 777
22.6 Default Simulation in reduced form models ................. 778
22.6.1 Standard error ............................................. 781
22.6.2 Variance Reduction with Control Variate .............. 783
22.7 Stochastic Intensity: The SSRD model .......................... 785
22.7.1 A two-factor shifted square-root diffusion model for intensity and interest rates (Brigo and Alfonsi (2003)). 786
22.7.2 Calibrating the joint stochastic model to CDS: Separability ................................................. 789
22.7.3 Discretization schemes for simulating ($\lambda, r$) ............ 797
22.7.4 Study of the convergence of the discretization schemes for simulating CIR processes (Alfonsi (2005)) .......... 801
22.7.5 Gaussian dependence mapping: A tractable approximated SSRD ............................................. 812
22.7.6 Numerical Tests: Gaussian Mapping and Correlation
Impact ..................................................................... 815
22.7.7 The impact of correlation on a few “test payoffs” ........ 817
22.7.8 A pricing example: A Cancellable Structure .............. 818
22.7.9 CDS Options and Jamshidian’s Decomposition .......... 820
22.7.10 Bermudan CDS Options ...................................... 830
22.8 Stochastic diffusion intensity is not enough: Adding jumps.
   The JCIR(++) Model ........................................ 830
22.8.1 The jump-diffusion CIR model (JCIR) ........................ 831
22.8.2 Bond (or Survival Probability) Formula. ........................ 832
22.8.3 Exact calibration of CDS: The JCIR++ model .................. 833
22.8.4 Simulation .................................................. 833
22.8.5 Jamshidian’s Decomposition. ................................ 834
22.8.6 Attaining high levels of CDS implied volatility .............. 836
22.8.7 JCIR(++) models as a multi-name possibility .............. 837
22.9 Conclusions and further research .............................. 838

23. CDS Options Market Models .................................................. 841
   23.1 CDS Options and Callable Defaultable Floaters .............. 844
      23.1.1 Once-callable defaultable floaters ..................... 846
23.2 A market formula for CDS options and callable defaultable
      floaters ...................................................... 847
      23.2.1 Market formulas for CDS Options ...................... 847
      23.2.2 Market Formula for callable DFRN .................... 849
      23.2.3 Examples of Implied Volatilities from the Market .... 852
23.3 Towards a Completely Specified Market Model ................. 854
      23.3.1 First Choice. One-period and two-period rates .......... 855
      23.3.2 Second Choice: Co-terminal and one-period CDS rates
          market model .......................... 860
      23.3.3 Third choice. Approximation: One-period CDS rates
          dynamics ........................................ 861
23.4 Hints at Smile Modeling ............................................... 863
23.5 Constant Maturity Credit Default Swaps (CMCDS) with the
      market model .............................................. 864
      23.5.1 CDS and Constant Maturity CDS ......................... 864
      23.5.2 Proof of the main result ............................ 867
      23.5.3 A few numerical examples ............................ 869

Part VIII. APPENDICES

A. Other Interest-Rate Models ............................................. 877
   A.1 Brennan and Schwartz’s Model .................................. 877
   A.2 Balduzzi, Das, Foresi and Sundaram’s Model .................. 878
   A.3 Flesaker and Hughston’s Model .................................. 879
   A.4 Rogers’s Potential Approach .................................... 881
   A.5 Markov Functional Models ...................................... 881
B. Pricing Equity Derivatives under Stochastic Rates
   B.1 The Short Rate and Asset-Price Dynamics
   B.2 The Pricing of a European Option on the Given Asset
   B.3 A More General Model
   B.3.1 The Construction of an Approximating Tree for $r$
   B.3.2 The Approximating Tree for $S$
   B.3.3 The Two-Dimensional Tree

C. A Crash Intro to Stochastic Differential Equations and Poisson Processes
   C.1 From Deterministic to Stochastic Differential Equations
   C.2 Ito's Formula
   C.3 Discretizing SDEs for Monte Carlo: Euler and Milstein Schemes
   C.4 Examples
   C.5 Two Important Theorems
   C.6 A Crash Intro to Poisson Processes
      C.6.1 Time inhomogeneous Poisson Processes
      C.6.2 Doubly Stochastic Poisson Processes (or Cox Processes)
      C.6.3 Compound Poisson processes
      C.6.4 Jump-diffusion Processes

D. A Useful Calculation

E. A Second Useful Calculation

F. Approximating Diffusions with Trees

G. Trivia and Frequently Asked Questions

H. Talking to the Traders
