Preface ................................................................. VII
Motivation ........................................................... VII
Aims, Readership and Book Structure ............................ XII
Final Word and Acknowledgments .............................. XIV
Description of Contents by Chapter ............................ XIX

Abbreviations and Notation ...................................... XXXV

Part I. BASIC DEFINITIONS AND NO ARBITRAGE

1. Definitions and Notation ....................................... 1
   1.1 The Bank Account and the Short Rate .................... 2
   1.2 Zero-Coupon Bonds and Spot Interest Rates ............. 4
   1.3 Fundamental Interest-Rate Curves ....................... 9
   1.4 Forward Rates ........................................... 11
   1.5 Interest-Rate Swaps and Forward Swap Rates .......... 13
   1.6 Interest-Rate Caps/Floors and Swaptions ............... 16

2. No-Arbitrage Pricing and Numeraire Change ............... 23
   2.1 No-Arbitrage in Continuous Time ....................... 24
   2.2 The Change-of-Numeraire Technique ..................... 26
   2.3 A Change of Numeraire Toolkit
       (Brigo & Mercurio 2001c) ............................... 28
       2.3.1 A helpful notation: “DC” ......................... 35
   2.4 The Choice of a Convenient Numeraire ................. 37
   2.5 The Forward Measure ................................... 38
   2.6 The Fundamental Pricing Formulas ..................... 39
       2.6.1 The Pricing of Caps and Floors ................. 40
   2.7 Pricing Claims with Deferred Payoffs .................. 42
   2.8 Pricing Claims with Multiple Payoffs .................. 42
   2.9 Foreign Markets and Numeraire Change ................ 44
# Part II. FROM SHORT RATE MODELS TO HJM

## 3. One-factor short-rate models

3.13.2 The Extended Exponential-Vasicek Model ............... 131
3.14 An Example of Calibration to Real-Market Data .......... 132

4. Two-Factor Short-Rate Models .................................. 137
  4.1 Introduction and Motivation ................................... 137
  4.2 The Two-Additive-Factor Gaussian Model G2++ ............. 142
    4.2.1 The Short-Rate Dynamics .................................. 143
    4.2.2 The Pricing of a Zero-Coupon Bond ...................... 144
    4.2.3 Volatility and Correlation Structures in Two-Factor
        Models .................................................. 148
    4.2.4 The Pricing of a European Option on a Zero-Coupon
        Bond ..................................................... 153
    4.2.5 The Analogy with the Hull-White Two-Factor Model .... 159
    4.2.6 The Construction of an Approximating Binomial Tree. 162
    4.2.7 Examples of Calibration to Real-Market Data .......... 166
  4.3 The Two-Additive-Factor Extended CIR/LS Model CIR2++ 175
    4.3.1 The Basic Two-Factor CIR2 Model ....................... 176
    4.3.2 Relationship with the Longstaff and Schwartz Model
        (LS) ..................................................... 177
    4.3.3 Forward-Measure Dynamics and Option Pricing for
        CIR2 .................................................... 178
    4.3.4 The CIR2++ Model and Option Pricing .................... 179

5. The Heath-Jarrow-Morton (HJM) Framework ............. 183
  5.1 The HJM Forward-Rate Dynamics ............................ 185
  5.2 Markovianity of the Short-Rate Process ................... 186
  5.3 The Ritchken and Sankarasubramanian Framework .......... 187
  5.4 The Mercurio and Moraleda Model ......................... 191

Part III. MARKET MODELS

6. The LIBOR and Swap Market Models (LFM and LSM) ........ 195
  6.1 Introduction ................................................. 195
  6.2 Market Models: a Guided Tour .............................. 196
  6.3 The Lognormal Forward-LIBOR Model (LFM) ................ 207
    6.3.1 Some Specifications of the Instantaneous Volatility of
        Forward Rates .......................................... 210
    6.3.2 Forward-Rate Dynamics under Different Numeraires .... 213
  6.4 Calibration of the LFM to Caps and Floors Prices .......... 220
    6.4.1 Piecewise-Constant Instantaneous-Volatility Structures 223
    6.4.2 Parametric Volatility Structures ........................ 224
    6.4.3 Cap Quotes in the Market ............................... 225
  6.5 The Term Structure of Volatility ........................... 226
    6.5.1 Piecewise-Constant Instantaneous Volatility Structures 228
| 7.6.1 Cascade Calibration under Various Correlations and Ranks | 342 |
| 7.6.2 Cascade Calibration Diagnostics: Terminal Correlation and Evolution of Volatilities | 346 |
| 7.6.3 The interpolation for the swaption matrix and its impact on the CCA | 349 |
| 7.7 Empirically efficient Cascade Calibration | 351 |
| 7.7.1 CCA with Endogenous Interpolation and Based Only on Pure Market Data | 352 |
| 7.7.2 Financial Diagnostics of the RCCAEI test results | 359 |
| 7.7.3 Endogenous Cascade Interpolation for missing swaptions volatilities quotes | 364 |
| 7.7.4 A first partial check on the calibrated $\sigma$ parameters stability | 364 |
| 7.8 Reliability: Monte Carlo tests | 366 |
| 7.9 Cascade Calibration and the cap market | 369 |
| 7.10 Cascade Calibration: Conclusions | 372 |
| 8. Monte Carlo Tests for LFM Analytical Approximations | 377 |
| 8.1 First Part. Tests Based on the Kullback Leibler Information (KLI) | 378 |
| 8.1.1 Distance between distributions: The Kullback Leibler information | 378 |
| 8.1.2 Distance of the LFM swap rate from the lognormal family of distributions | 381 |
| 8.1.3 Monte Carlo tests for measuring KLI | 384 |
| 8.1.4 Conclusions on the KLI-based approach | 391 |
| 8.2 Second Part: Classical Tests | 392 |
| 8.3 The “Testing Plan” for Volatilities | 392 |
| 8.4 Test Results for Volatilities | 396 |
| 8.4.1 Case (1): Constant Instantaneous Volatilities | 396 |
| 8.4.2 Case (2): Volatilities as Functions of Time to Maturity | 401 |
| 8.4.3 Case (3): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity | 410 |
| 8.5 The “Testing Plan” for Terminal Correlations | 421 |
| 8.6 Test Results for Terminal Correlations | 427 |
| 8.6.1 Case (i): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Typical Rank-Two Correlations | 427 |
| 8.6.2 Case (ii): Constant Instantaneous Volatilities, Typical Rank-Two Correlations | 430 |
| 8.6.3 Case (iii): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Some Negative Rank-Two Correlations | 432 |
Part IV. THE VOLATILITY SMILE

9. Including the Smile in the LFM .......................... 447
   9.1 A Mini-tour on the Smile Problem ...................... 447
   9.2 Modeling the Smile .................................. 450

10. Local-Volatility Models .................................. 453
    10.1 The Shifted-Lognormal Model ......................... 454
    10.2 The Constant Elasticity of Variance Model .......... 456
    10.3 A Class of Analytically-Tractable Models .......... 459
    10.4 A Lognormal-Mixture (LM) Model ................... 463
    10.5 Forward Rates Dynamics under Different Measures .. 467
         10.5.1 Decorrelation Between Underlying and Volatility 469
    10.6 Shifting the LM Dynamics ............................ 469
    10.7 A Lognormal-Mixture with Different Means (LMDM) .. 471
    10.8 The Case of Hyperbolic-Sine Processes ............ 473
    10.9 Testing the Above Mixture-Models on Market Data .. 475
    10.10 A Second General Class ............................ 478
    10.11 A Particular Case: a Mixture of GBM’s .......... 483
    10.12 An Extension of the GBM Mixture Model Allowing for Im-
        plied Volatility Skews .................................. 486
    10.13 A General Dynamics à la Dupire (1994) ............ 489

11. Stochastic-Volatility Models ............................ 495
    11.1 The Andersen and Brotherton-Ratcliffe (2001) Model 497
    11.3 The Piterbarg (2003) Model .......................... 504
    11.5 The Joshi and Rebonato (2003) Model ................ 513

12. Uncertain-Parameter Models ............................. 517
    12.1 The Shifted-Lognormal Model with Uncertain Parameters
         (SLMUP) ............................................... 519
         12.1.1 Relationship with the Lognormal-Mixture LVM 520
    12.2 Calibration to Caplets ................................ 520
    12.3 Swaption Pricing ..................................... 522
    12.4 Monte-Carlo Swaption Pricing ........................ 524
    12.5 Calibration to Swaptions ............................. 526
12.6 Calibration to Market Data ........................................... 528  
12.7 Testing the Approximation for Swaptions Prices .......... 530  
12.8 Further Model Implications .............................. 535  
12.9 Joint Calibration to Caps and Swaptions .......... 539  

Part V. EXAMPLES OF MARKET PAYOFFS

13. Pricing Derivatives on a Single Interest-Rate Curve ...... 547  
13.1 In-Arrears Swaps ............................................ 548  
13.2 In-Arrears Caps ................................................................. 550  
13.2.1 A First Analytical Formula (LFM) ............... 550  
13.2.2 A Second Analytical Formula (G2++) ............... 551  
13.3 Autocaps ........................................................................ 551  
13.4 Caps with Deferred Caplets ................................. 552  
13.4.1 A First Analytical Formula (LFM) ............... 553  
13.4.2 A Second Analytical Formula (G2++) ............... 553  
13.5 Ratchet Caps and Floors ........................................... 554  
13.5.1 Analytical Approximation for Ratchet Caps with the  
        LFM ........................................................................ 555  
13.6 Ratchets (One-Way Floaters) ........................................ 556  
13.7 Constant-Maturity Swaps (CMS) ......................... 557  
13.7.1 CMS with the LFM ......................................................... 557  
13.7.2 CMS with the G2++ Model ............................... 559  
13.8 The Convexity Adjustment and Applications to CMS ...... 559  
13.8.1 Natural and Unnatural Time Lags ......................... 559  
13.8.2 The Convexity-Adjustment Technique .................. 561  
13.8.3 Deducing a Simple Lognormal Dynamics from the Ad-  
        justment ................................................................ 565  
13.8.4 Application to CMS ............................................ 565  
13.8.5 Forward Rate Resetting Unnaturally and Average-  
        Rate Swaps ................................................................ 566  
13.9 Average Rate Caps ......................................................... 568  
13.10 Captions and Floorings .............................................. 570  
13.11 Zero-Coupon Swaptions ........................................... 571  
13.12 Eurodollar Futures .................................................... 575  
13.12.1 The Shifted Two-Factor Vasicek G2++ Model ....... 576  
13.12.2 Eurodollar Futures with the LFM ...................... 577  
13.13 LFM Pricing with “In-Between” Spot Rates ............... 578  
13.13.1 Accrual Swaps ......................................................... 579  
13.13.2 Trigger Swaps ......................................................... 582  
13.14 LFM Pricing with Early Exercise and Possible Path Dependence 584  
13.15 LFM: Pricing Bermudan Swaptions ....................... 588  
13.15.1 Least Squared Monte Carlo Approach .................. 589  
13.15.2 Carr and Yang’s Approach .................................... 591
13.15.3 Andersen’s Approach .................................. 592
13.15.4 Numerical Example .................................. 595
13.16 New Generation of Contracts ......................... 601
13.16.1 Target Redemption Notes ........................... 602
13.16.2 CMS Spread Options ............................... 603

14. Pricing Derivatives on Two Interest-Rate Curves ....... 607
14.1 The Attractive Features of G2++ for Multi-Curve Payoffs . 608
14.1.1 The Model ......................................... 608
14.1.2 Interaction Between Models of the Two Curves “1” and “2” ................................................................. 610
14.1.3 The Two-Models Dynamics under a Unique Conven- nient Forward Measure .............................. 611
14.2 Quanto Constant-Maturity Swaps ....................... 613
14.2.1 Quanto CMS: The Contract ......................... 613
14.2.2 Quanto CMS: The G2++ Model .................... 615
14.2.3 Quanto CMS: Quanto Adjustment .................. 621
14.3 Differential Swaps ..................................... 623
14.3.1 The Contract ....................................... 623
14.3.2 Differential Swaps with the G2++ Model ........... 624
14.3.3 A Market-Like Formula ............................. 626
14.4 Market Formulas for Basic Quanto Derivatives ........... 626
14.4.1 The Pricing of Quanto Caplets/Floorlets .......... 627
14.4.2 The Pricing of Quanto Caps/Floors ................ 628
14.4.3 The Pricing of Differential Swaps ................. 629
14.4.4 The Pricing of Quanto Swaptions ................. 630
14.5 Pricing of Options on two Currency LIBOR Rates ....... 633
14.5.1 Spread Options ..................................... 635
14.5.2 Options on the Product ............................ 637
14.5.3 Trigger Swaps ...................................... 638
14.5.4 Dealing with Multiple Dates ....................... 639

Part VI. INFLATION

15. Pricing of Inflation-Indexed Derivatives ................. 643
15.1 The Foreign-Currency Analogy .......................... 644
15.2 Definitions and Notation ................................ 645
15.3 The JY Model .......................................... 646

16. Inflation-Indexed Swaps .................................. 649
16.1 Pricing of a ZCIIS ..................................... 649
16.2 Pricing of a YYIIS ..................................... 651
16.3 Pricing of a YYIIS with the JY Model ................. 652
16.4 Pricing of a YYIIS with a First Market Model ........ 654
16.5 Pricing of a YYIIS with a Second Market Model .............. 657

17. Inflation-Indexed Caplets/Floorlets ............................... 661
   17.1 Pricing with the JY Model .................................. 661
   17.2 Pricing with the Second Market Model ..................... 663
   17.3 Inflation-Indexed Caps ..................................... 665

18. Calibration to market data ...................................... 669

19. Introducing Stochastic Volatility ................................ 673
   19.1 Modeling Forward CPI’s with Stochastic Volatility .......... 674
   19.2 Pricing Formulae ........................................... 676
      19.2.1 Exact Solution for the Uncorrelated Case ............. 677
      19.2.2 Approximated Dynamics for Non-zero Correlations ..... 680
   19.3 Example of Calibration .................................... 681

20. Pricing Hybrids with an Inflation Component .................. 689
   20.1 A Simple Hybrid Payoff .................................. 689

Part VII. CREDIT

21. Introduction and Pricing under Counterparty Risk ............. 695
   21.1 Introduction and Guided Tour ................................ 696
      21.1.1 Reduced form (Intensity) models ..................... 697
      21.1.2 CDS Options Market Models .......................... 699
      21.1.3 Firm Value (or Structural) Models .................... 702
      21.1.4 Further Models ...................................... 704
      21.1.5 The Multi-name picture: FtD, CDO and Copula Func-
           tions ............................................... 705
      21.1.6 First to Default (FtD) Basket. ........................ 705
      21.1.7 Collateralized Debt Obligation (CDO) Tranches ....... 707
      21.1.8 Where can we introduce dependence? .................... 708
      21.1.9 Copula Functions .................................... 710
      21.1.10 Dynamic Loss models. ................................ 718
      21.1.11 What data are available in the market? .............. 719
   21.2 Defaultable (corporate) zero coupon bonds ................. 723
      21.2.1 Defaultable (corporate) coupon bonds ................ 724
   21.3 Credit Default Swaps and Defaultable Floaters ............. 724
      21.3.1 CDS payoffs: Different Formulations ................ 725
      21.3.2 CDS pricing formulas ................................ 727
      21.3.3 Changing filtration: $\mathcal{F}_t$ without default VS complete
           $\mathcal{G}_t$ .......................................... 728
      21.3.4 CDS forward rates: The first definition ............. 730
21.3.5 Market quotes, model independent implied survival probabilities and implied hazard functions .......... 731
21.3.6 A simpler formula for calibrating intensity to a single CDS ............................................. 735
21.3.7 Different Definitions of CDS Forward Rates and Analogies with the LIBOR and SWAP rates .......... 737
21.3.8 Defaultable Floater and CDS ............................................. 739
21.4 CDS Options and Callable Defaultable Floaters ............. 743
21.5 Constant Maturity CDS ............................................. 744
21.5.1 Some interesting Financial features of CMCDS ......... 745
21.6 Interest-Rate Payoffs with Counterparty Risk .................. 747
21.6.1 General Valuation of Counterparty Risk ............. 748
21.6.2 Counterparty Risk in single Interest Rate Swaps (IRS) ... 750

22. Intensity Models ............................................. 757
22.1 Introduction and Chapter Description ..................... 757
22.2 Poisson processes ............................................. 759
22.2.1 Time homogeneous Poisson processes ............. 760
22.2.2 Time inhomogeneous Poisson Processes ............ 761
22.2.3 Cox Processes ............................................. 763
22.3 CDS Calibration and Implied Hazard Rates/ Intensities .... 764
22.4 Inducing dependence between Interest-rates and the default event ............................................. 776
22.5 The Filtration Switching Formula: Pricing under partial information ............................................. 777
22.6 Default Simulation in reduced form models ............. 778
22.6.1 Standard error ............................................. 781
22.6.2 Variance Reduction with Control Variate ............. 783
22.7 Stochastic Intensity: The SSRD model ..................... 785
22.7.1 A two-factor shifted square-root diffusion model for intensity and interest rates (Brigo and Alfonsi (2003)) ..... 786
22.7.2 Calibrating the joint stochastic model to CDS: Separability ............................................. 789
22.7.3 Discretization schemes for simulating $(\lambda, r)$ ........ 797
22.7.4 Study of the convergence of the discretization schemes for simulating CIR processes (Alfonsi (2005)) ..... 801
22.7.5 Gaussian dependence mapping: A tractable approximated SSRD ............................................. 812
22.7.6 Numerical Tests: Gaussian Mapping and Correlation Impact ............................................. 815
22.7.7 The impact of correlation on a few “test payoffs” .... 817
22.7.8 A pricing example: A Cancellable Structure ............. 818
22.7.9 CDS Options and Jamshidian’s Decomposition ........ 820
22.7.10 Bermudan CDS Options ............................................. 830
22.8 Stochastic diffusion intensity is not enough: Adding jumps.
   The JCIR(++) Model ........................................ 830
   22.8.1 The jump-diffusion CIR model (JCIR) .................. 831
   22.8.2 Bond (or Survival Probability) Formula ................ 832
   22.8.3 Exact calibration of CDS: The JCIR++ model .......... 833
   22.8.4 Simulation ........................................ 833
   22.8.5 Jamshidian’s Decomposition ................................ 834
   22.8.6 Attaining high levels of CDS implied volatility ....... 836
   22.8.7 JCIR(++) models as a multi-name possibility .......... 837
   22.9 Conclusions and further research ........................ 838

23. CDS Options Market Models ..................................... 841
   23.1 CDS Options and Callable Defaultable Floaters ......... 844
      23.1.1 Once-callable defaultable floaters .................. 846
   23.2 A market formula for CDS options and callable defaultable
      floaters .................................................. 847
      23.2.1 Market formulas for CDS Options .................... 847
      23.2.2 Market Formula for callable DFRN ................... 849
      23.2.3 Examples of Implied Volatilities from the Market .... 852
   23.3 Towards a Completely Specified Market Model ............. 854
      23.3.1 First Choice. One-period and two-period rates ....... 855
      23.3.2 Second Choice: Co-terminal and one-period CDS rates
      market model ............................................. 860
      23.3.3 Third choice. Approximation: One-period CDS rates
      dynamics ................................................. 861
   23.4 Hints at Smile Modeling .................................. 863
   23.5 Constant Maturity Credit Default Swaps (CMCDS) with the
      market model ............................................ 864
      23.5.1 CDS and Constant Maturity CDS ..................... 864
      23.5.2 Proof of the main result ........................... 867
      23.5.3 A few numerical examples ............................ 869

Part VIII. APPENDICES

A. Other Interest-Rate Models .................................... 877
   A.1 Brennan and Schwartz’s Model ............................ 877
   A.2 Balduzzi, Das, Foresi and Sundaram’s Model .............. 878
   A.3 Flesaker and Hughston’s Model ............................ 879
   A.4 Rogers’s Potential Approach ............................... 881
   A.5 Markov Functional Models ................................. 881
B. Pricing Equity Derivatives under Stochastic Rates
   B.1 The Short Rate and Asset-Price Dynamics
   B.1.1 The Dynamics under the Forward Measure
   B.2 The Pricing of a European Option on the Given Asset
   B.3 A More General Model
   B.3.1 The Construction of an Approximating Tree for $r$
   B.3.2 The Approximating Tree for $S$
   B.3.3 The Two-Dimensional Tree
C. A Crash Intro to Stochastic Differential Equations and Poisson Processes
   C.1 From Deterministic to Stochastic Differential Equations
   C.2 Ito's Formula
   C.3 Discretizing SDEs for Monte Carlo: Euler and Milstein Schemes
   C.4 Examples
   C.5 Two Important Theorems
   C.6 A Crash Intro to Poisson Processes
      C.6.1 Time inhomogeneous Poisson Processes
      C.6.2 Doubly Stochastic Poisson Processes (or Cox Processes)
      C.6.3 Compound Poisson processes
      C.6.4 Jump-diffusion Processes
D. A Useful Calculation
E. A Second Useful Calculation
F. Approximating Diffusions with Trees
G. Trivia and Frequently Asked Questions
H. Talking to the Traders
