# Table of Contents

## Introduction

- Content and Purpose of the Book ........................................... 1
- Order and Character of the Exposition .................................... 3
- Remarks for the Professional .............................................. 5

## 1 Basic Concepts and Simplest Properties of Convex Polyhedra

- 1.1 Definition of a Convex Polyhedron ................................. 7
- 1.2 Determining a Polyhedron from the Planes of Its Faces ....... 16
- 1.3 Determining a Closed Polyhedron from Its Vertices ............ 21
- 1.4 Determining an Unbounded Polyhedron from Its Vertices and the Limit Angle .................................................. 26
- 1.5 The Spherical Image ..................................................... 39
- 1.6 Development .................................................................... 49
- 1.7 Topological Properties of Polyhedra and Developments ....... 56
- 1.8 Some Theorems of the Intrinsic Geometry of Developments 72
- 1.9 Generalizations ............................................................. 82

## 2 Methods and Results

- 2.1 The Cauchy Lemma ....................................................... 87
- 2.2 The Mapping Lemma ..................................................... 93
- 2.3 Determining a Polyhedron from a Development (Survey of Chapters 3, 4, and 5) .................................................. 99
- 2.4 Polyhedra with Prescribed Face Directions (Survey of Chapters 6, 7, and 8) .................................................. 106
- 2.5 Polyhedra with Vertices on Prescribed Rays (Survey of Chapter 9) .................................................. 117
- 2.6 Infinitesimal Rigidity Theorems (Survey of Chapters 10 and 11) .................................................. 124
- 2.7 Passage from Polyhedra to Curved Surfaces ....................... 136
- 2.8 Basic Topological Notions .............................................. 141
- 2.9 The Domain Invariance Theorem ................................. 147
# Contents

3  **Uniqueness of Polyhedra with Prescribed Development**  . 155
   3.1 Several Lemmas on Polyhedral Angles  . 155
   3.2 Equality of Dihedral Angles in Polyhedra with Equal
       Planar Angles  . 163
   3.3 Uniqueness of Polyhedra with Prescribed Development  . 169
   3.4 Unbounded Polyhedra of Curvature Less Than $2\pi$  . 173
   3.5 Polyhedra with Boundary  . 182
   3.6 Generalizations  . 186

4  **Existence of Polyhedra with Prescribed Development**  . 193
   4.1 The Manifold of Developments  . 193
   4.2 The Manifold of Polyhedra  . 202
   4.3 Existence of Closed Convex Polyhedra with Prescribed
       Development  . 210
   4.4 Existence of Unbounded Convex Polyhedra with
       Prescribed Development  . 212
   4.5 Existence of Unbounded Polyhedra Given the Development
       and the Limit Angle  . 218

5  **Gluing and Flexing Polyhedra with Boundary**  . 229
   5.1 Gluing Polyhedra with Boundary  . 229
   5.2 Flexes of Convex Polyhedra  . 246
   5.3 Generalizations of Chapters 4 and 5  . 261

6  **Conditions for Congruence of Polyhedra with Parallel
   Faces**  . 271
   6.1 Lemmas on Convex Polyhedra  . 271
   6.2 On Linear Combination of Polyhedra  . 281
   6.3 Congruence Conditions for Closed Polyhedra  . 287
   6.4 Congruence Conditions for Unbounded Polyhedra  . 291
   6.5 Another Proof and Generalization of the Theorem on
       Unbounded Polyhedra. Polyhedra with Boundary  . 295
   6.6 Generalizations  . 304

7  **Existence Theorems for Polyhedra with Prescribed
   Face Directions**  . 311
   7.1 Existence of Polyhedra with Prescribed Face Areas  . 311
   7.2 Minkowski’s Proof of the Existence of Polyhedra with
       Prescribed Face Areas  . 317
   7.3 Existence of Unbounded Polyhedra with Prescribed Face
       Areas  . 321
   7.4 The General Existence Theorem for Unbounded Polyhedra  . 327
   7.5 Existence of Convex Polyhedra with Prescribed Support
       Numbers  . 332
8 Relationship Between the Congruence Condition for Polyhedra with Parallel Faces and Other Problems .... 349
  8.1 Parallelohedra ........................................ 349
  8.2 A Polyhedron of Least Area with Fixed Volume .... 359
  8.3 Mixed Volumes and the Brunn Inequality .......... 366

9 Polyhedra with Vertices on Prescribed Rays .......... 377
  9.1 Closed Polyhedra .................................... 377
  9.2 Unbounded Polyhedra .................................. 388
  9.3 Generalizations ....................................... 395

10 Infinitesimal Rigidity of Convex Polyhedra with Stationary Development .......................... 403
  10.1 Deformation of Polyhedral Angles ..................... 404
  10.2 The Strong Cauchy Lemma ............................ 410
  10.3 Stationary Dihedral Angles for Stationary Planar Angles ... 415
  10.4 Infinitesimal Rigidity of Polyhedra and Equilibrium of Hinge Mechanisms ......................... 421
  10.5 On the Deformation of Developments ................ 425
  10.6 Rigidity of Polyhedra with Stationary Development ... 429
  10.7 Generalizations ....................................... 435

11 Infinitesimal Rigidity Conditions for Polyhedra with Prescribed Face Directions ................. 439
  11.1 On Deformations of Polygons ......................... 439
  11.2 Infinitesimal Rigidity Theorems for Polyhedra ........ 445
  11.3 Relationship of Infinitesimal Rigidity Theorems with One Another and with the Theory of Mixed Volumes ... 453
  11.4 Generalizations ....................................... 459

12 Supplements ............................................ 463
  12.1 Supplement to Chapter 3: Yu. A. Volkov. An Estimate for the Deformation of a Convex Surface in Dependence on the Variation of Its Intrinsic Metric .......................... 463
  12.3 Supplement to Chapter 5: L. A. Shor. On Flexibility of Convex Polyhedra with Boundary ................ 506
