Contents

Part I General Aspects

Energy Methods for Constitutive Modelling in Geomechanics
I.F. Collins and A.T.T. Tai .............................................. 3

Physical Background of Hypoplasticity
Gerd Gudehus ................................................................. 17

Thermodynamics of Porous Continua
G.T. Houlsby and A.M. Puzrin .............................................. 39

Effective Stress Formulation of Unsaturated Soil Mechanics
F. Molenkamp ................................................................. 61

Progress in Binary Medium Modeling of Geological Materials
Z.-J. Shen ................................................................. 77

Part II Constitutive Modelling

Generic Constitutive Ingredients in CSSM Models for Sands
Y.F. Dafalias, A.G. Papadimitriou, X.S. Li, and M.T. Manzari ...... 103

State Boundary Surface in Hypoplasticity
D. Mašin and I. Herle ...................................................... 117

Modelling of Bonded Soils with Unstable Structure
R. Nova ........................................................................ 129

An Evaluation of Different Constitutive Models
to Predict the Directional Response of a Reconstituted
Fine-Grained Soil
C. Tamagnini, D. Mašin, D. Costanzo, and G. Viggiani .......... 143
Two Elastoplastic Models for Small and Large Strains and Their Use in Engineering Practise
P.A. Vermeer, R. Schwab, and T. Benz .................. 159

Elastic Visco-Plastic Models for the Time-Dependent Stress–Strain Behaviour of Geomaterials
J.-H. Yin .................................................. 175

Part III Micromechanics

Micro-Polar Effects under Monotonic and Cyclic Shearing
E. Bauer, J. Tejchman, S.F. Tantono, and W. Huang ................. 193

Modeling the Postlocalization Regime with Local Second Gradient Models: Nonuniqueness of Solutions and Nonpersistent Shear Bands
P. Bésuelle and R. Chambon .................................. 209

Confined Compression and Rod Penetration of a Dense Granular Medium: Discrete Element Modelling and Validation
Y.C. Chung and J.Y. Ooi .................................... 223

Application of Discrete Element Method to Geomechanics
M. Jiang, H.-S. Yu .......................................... 241

The Role of Particle Crushing in Granular Materials
G. R. McDowell ............................................. 271

Micromechanical Study of Damage and Permeability Variation in Brittle Rocks
J.J. Zhou, J.F. Shao, and D. Lydzba .......................... 289

Part IV Analytical and Numerical Methods

Hydrologically Driven Slope Failure Initiation in Variably Saturated Porous Media
R.I. Borja, G. Oettl, B.A. Ebel and K. Loague ......................... 303

A Survey of Some Mathematical Results for Highly Frictional Granular Materials
G.M. Cox, N. Thamwattana and J.M. Hill ........................ 313

Double-Slip and Spin: Dilatant Shear in a Reduced Cosserat Model
D. Harris .................................................... 329
The Linear Matching Method for Limit and Shakedown Analysis
A.R.S. Ponter and M. Boulbibane

On Recent Analytical Results for Advective Transport in Fluid-Saturated Porous Media
A.P.S. Selvadurai

Part V Granular Materials: Theory and Experiment

Unusual Soil Behaviour and its Challenge to Constitutive Modelling
J. Chu

Histotropy of Hostun RF Loose Sand
T. Doanh, Z. Finge, S. Boucq, and Ph. Dubujet

Incremental Nonlinearity in Phenomenological and Multiscale Constitutive Relations
F. Nicot and F. Darve

Long-term Deformations in Soils due to Cyclic Loading
A. Niemunis, T. Wichtmann, and T. Triantafyllidis

On the Factors Affecting the Formation of Shear Band Systems in Non-Cohesive Soils Under Extensional Strain
T. Triantafyllidis, H. Wolf, and D. König

Acceleration Waves in Hypoplasticity - 2D Analysis
B. Weingartner, V.A. Osinov and W. Wu

Part VI Engineering Applications

Static and Cyclic Behavior of a Silty Sand According to Tests on Undisturbed Samples
A.B. Huang and Y.T. Huang

The Role of Analysis in Non-Displacement Pile Design
R. Salgado

Assessment of Uncertainties in Wellbore Stability Analysis
Y. Sheng, D. Reddish, and Z. Lu
Modern Trends in Geomechanics
Wu, W.; Yu, H.-S. (Eds.)
2006, X, 560 p., Hardcover
ISBN: 978-3-540-25135-4
