
Contents

Invariance Principles with Logarithmic Averaging for Ergodic Simulations <i>Olivier Bardou</i>	1
Technical Analysis Techniques versus Mathematical Models: Boundaries of Their Validity Domains <i>Christophette Blanchet-Scalliet, Awa Diop, Rajna Gibson, Denis Talay, Etienne Tanré</i>	15
Weak Approximation of Stopped Diffusions <i>F.M. Buchmann, W.P. Petersen</i>	31
Approximation of Stochastic Programming Problems <i>Christine Choirat, Christian Hess, Raffaello Seri</i>	45
The Asymptotic Distribution of Quadratic Discrepancies <i>Christine Choirat, Raffaello Seri</i>	61
Weighted Star Discrepancy of Digital Nets in Prime Bases <i>Josef Dick, Harald Niederreiter, Friedrich Pillichshammer</i>	77
Explaining Effective Low-Dimensionality <i>Andrew Dickinson</i>	97
Selection Criteria for (Random) Generation of Digital (0,s)-Sequences <i>Henri Faure</i>	113
Imaging of a Dissipative Layer in a Random Medium Using a Time Reversal Method <i>Jean-Pierre Fouque, Josselin Garnier, André Nachbin, Knut Sølna</i>	127

VIII Contents

A Stochastic Numerical Method for Diffusion Equations and Applications to Spatially Inhomogeneous Coagulation Processes <i>Flavius Guias</i>	147
Non-Uniform Low-Discrepancy Sequence Generation and Integration of Singular Integrands <i>Jürgen Hartinger, Reinhold Kainhofer</i>	163
Construction of Good Rank-1 Lattice Rules Based on the Weighted Star Discrepancy <i>Stephen Joe</i>	181
Probabilistic Approximation via Spatial Derivation of Some Nonlinear Parabolic Evolution Equations <i>B. Jourdain</i>	197
Myths of Computer Graphics <i>Alexander Keller</i>	217
Illumination in the Presence of Weak Singularities <i>Thomas Kollig, Alexander Keller</i>	245
Irradiance Filtering for Monte Carlo Ray Tracing <i>Janne Kontkanen, Jussi Räsänen, Alexander Keller</i>	259
On the Star Discrepancy of Digital Nets and Sequences in Three Dimensions <i>Peter Kritzer</i>	273
Lattice Rules for Multivariate Approximation in the Worst Case Setting <i>Frances Y. Kuo, Ian H. Sloan, Henryk Woźniakowski</i>	289
Randomized Quasi-Monte Carlo Simulation of Markov Chains with an Ordered State Space <i>Pierre L'Ecuyer, Christian Lécot, Bruno Tuffin</i>	331
Experimental Designs Using Digital Nets with Small Numbers of Points <i>Kwong-Ip Liu, Fred J. Hickernell</i>	343
Concentration Inequalities for Euler Schemes <i>Florent Malrieu, Denis Talay</i>	355
Fast Component-by-Component Construction, a Reprise for Different Kernels <i>Dirk Nuyens, Ronald Cools</i>	373

**A Reversible Jump MCMC Sampler
for Object Detection in Image Processing**
Mathias Ortner, Xavier Descombes, Josiane Zerubia 389

**Quasi-Monte Carlo for Integrands
with Point Singularities at Unknown Locations**
Art B. Owen 403

**Infinite-Dimensional Highly-Uniform Point Sets Defined
via Linear Recurrences in \mathbb{F}_{2^w}**
François Panneton, Pierre L'Ecuyer 419

**Monte Carlo Studies of Effective Diffusivities for Inertial
Particles**
G.A. Pavliotis, A.M. Stuart, L. Band 431

An Adaptive Importance Sampling Technique
Teemu Pennanen, Matti Koivu 443

MinT: A Database for Optimal Net Parameters
Rudolf Schürer, Wolfgang Ch. Schmid 457

**On Ergodic Measures for McKean–Vlasov Stochastic
Equations**
A. Yu. Veretennikov 471

**On the Distribution of Some New Explicit Inversive
Pseudorandom Numbers and Vectors**
Arne Winterhof 487

**Error Analysis of Splines
for Periodic Problems Using Lattice Designs**
Xiaoyan Zeng, King-Tai Leung, Fred J. Hickernell 501
