Preface ........................................................................................................................................ V

Introduction ................................................................................................................................. 1

1 The current situation: markets in upheaval, turbulence in the sector oligopoly .................................. 9
   1.1 Overview .......................................................................................................................... 9
   1.2 Structural growth weakness in the triad ........................................................................ 12
   1.3 Competition from Asia intensifies .............................................................................. 15
   1.4 Growing overcapacities, decreasing capacity utilization ........................................... 20
   1.5 Atomization of model ranges ....................................................................................... 26
   1.6 Change in the buying patterns of "automobile consumers" ........................................ 29
   1.7 Intensified overall price and cost competition .......................................................... 32
      1.7.1 The situation of the branch as a whole ................................................................. 32
      1.7.2 Profit pressure in core business, but not for all producers .................................... 34
   1.8 Passing the loss on to the components suppliers ...................................................... 37
   1.9 Conclusion: branch with increasing profit pressure .................................................... 39

2 The Western European automotive industry: cost stress and profit pressure .................................. 41
   2.1 External pressure factors ............................................................................................ 41
      2.1.1 Cost gap in international comparison ................................................................. 41
      2.1.2 Intensification of global location competition .................................................. 56
      2.1.3 Asian OEMs in catching up competition on quality / performance / styling .......... 66
2.1.4 "First we take Manhattan, then we take Berlin!" - Asian brands on the advance ........................................ 69

2.2 Home-made load factors ................................................................. 73
  2.2.1 Boundless model palettes ...................................................... 73
  2.2.2 Exploding development costs, decreasing amounts of coverage ................................................................. 77
  2.2.3 Lacking model flexibility and decreasing capacity utilization .......................................................... 81
  2.2.4 Crowding out competition/ overcapacities/ margin pressure .......................................................... 83
  2.2.5 Operative losses in the core segments of the "productive" added value chain/ management mistakes ....................... 84

3 Global mega trends until 2015: intensified selection process ............ 87
  3.1 OECD-volume markets: in saturation ........................................ 87
  3.2 Growth champions of the future: BRIC states .......................... 93
  3.3 New orientation of global production locations ......................... 98
  3.4 Brand orientation of buyers' preferences, Asian competition advances .......................................................... 104
  3.5 Asian competitors on the advance ........................................... 112
  3.6 Concentration at all levels: upheaval in the added value chain. 118
  3.7 Forming of strategic alliances at OEMs ..................................... 125
  3.8 Changed energy supply conditions .......................................... 127
  3.9 Conclusion: large structural change in the global automotive industry ........................................................................ 131

4 Further concentration of automobile manufacturers by 2015. 135
  4.1 Predatory competition shows its effect ...................................... 135
  4.2 Evaluation of the 11 largest OEMs according to "survival-criteria" ................................................................. 139
    4.2.1 Analysis method ................................................................. 139
    4.2.2 Establishment of the "IWK's survival-index" ......................... 141
4.2.3 Sources of information ........................................ 141
4.2.4 Valuation model .............................................. 142
4.3 "IWK Survival-Index": valuations in the various categories ... 143
  4.3.1 Current Economic Situation (CES) .......................... 143
  4.3.2 Sustainability ............................................... 149
  4.3.3 Strategy .................................................. 155
4.4 Total results of the ranking ..................................... 156
4.5 Conclusion: who has the best chances in the predatory
  competition? ..................................................... 158

5 Consequences for the Components Supply Industry .......... 163
  5.1 Typology of the added value chain ........................... 163
  5.2 Concentration in the producers’ oligopoly brings risks for
      suppliers .................................................. 166
    5.2.1 Upward pressure on costs from OEMs becomes still more
          rigid .................................................... 166
    5.2.2 Intensified competition due to progressive concentration.... 168
    5.2.3 Excessive demands on middle-class organization
          structures .............................................. 170
    5.2.4 Excessive demands on financial power where
          capitalization is insufficient ............................. 171
    5.2.5 Conclusion: decreasing profits, increasing risks, further
          consolidation .......................................... 173
  5.3 Strategic success factors..................................... 175
    5.3.1 Innovation strategy .................................... 176
    5.3.2 Cost reduction strategy: increase in productivity or transfer
          to low-cost countries ..................................... 180
    5.3.3 Expansion strategy: more activities within the added value
          chain ..................................................... 187
    5.3.4 Growth strategy: economies of scale and cost synergies .... 188
    5.3.5 Niche strategy: specialization .......................... 189
    5.3.6 Cooperation strategy: creation of clusters ................ 192
5.3.7 Location strategy: go to where the OEMs are ......................... 196
5.3.8 Financing strategy: securing increasing capital demand ........ 197
5.3.9 Conclusion: profitable growth is possible! ......................... 200

6 The future map of global vehicle location – some reflections ... 205

6.1 Stocktaking ........................................................................... 205
6.1.1 Industrial states in the maelstrom of globalization .......... 205
6.1.2 Increasing location attractiveness of the NIC's ................. 209

6.2 Perspective of automotive industry in West Europe: the
German case ............................................................................. 211
6.2.1 The European dimension .................................................. 212
6.2.2 The German case: location heavyweight of the automotive
industry .................................................................................. 217

6.3 Determining factors of economic competitiveness .......... 220

6.4 Job Engine Automotive industry: Peak Level passed ......... 224
6.4.1 In the short-term: gradual melting-process .................... 224
6.4.2 In the long-term: reduction to essentials ....................... 229

6.5 Summary .............................................................................. 236

Appendix .................................................................................... 239

List of figures ............................................................................ 245
List of tables ............................................................................. 249
List of abbreviations ................................................................. 251

Literature ................................................................................... 253

Author ....................................................................................... 261
High Noon in the Automotive Industry
Becker, H.
2006, XII, 261 p. 86 illus., Hardcover
ISBN: 978-3-540-25869-8
