Contents

1. Introduction .................................................. 1
   1.1 Computational Fluid Dynamics .......................... 1
   1.2 Levels of Approximation: General ..................... 2
   1.3 Statement of the Scale Separation Problem ........... 3
   1.4 Usual Levels of Approximation ........................ 5
   1.5 Large-Eddy Simulation: from Practice to Theory.
      Structure of the Book ................................. 9

2. Formal Introduction to Scale Separation:
   Band-Pass Filtering ........................................ 15
   2.1 Definition and Properties of the Filter
      in the Homogeneous Case .............................. 15
      2.1.1 Definition ........................................ 15
      2.1.2 Fundamental Properties .......................... 17
      2.1.3 Characterization of Different Approximations .... 18
      2.1.4 Differential Filters ............................. 20
      2.1.5 Three Classical Filters for Large-Eddy Simulation .. 21
      2.1.6 Differential Interpretation of the Filters ......... 26
   2.2 Spatial Filtering: Extension to the Inhomogeneous Case .. 31
      2.2.1 General .......................................... 31
      2.2.2 Non-uniform Filtering Over an Arbitrary Domain .. 32
      2.2.3 Local Spectrum of Commutation Error .............. 42
   2.3 Time Filtering: a Few Properties ....................... 43

3. Application to Navier–Stokes Equations ....................... 45
   3.1 Navier–Stokes Equations ............................... 46
      3.1.1 Formulation in Physical Space .................... 46
      3.1.2 Formulation in General Coordinates ............. 46
      3.1.3 Formulation in Spectral Space .................... 47
   3.2 Filtered Navier–Stokes Equations in Cartesian Coordinates
      (Homogeneous Case) ..................................... 48
      3.2.1 Formulation in Physical Space .................... 48
      3.2.2 Formulation in Spectral Space .................... 48
3.3 Decomposition of the Non-linear Term.

Associated Equations for the Conventional Approach ........ 49
3.3.1 Leonard’s Decomposition .................................... 49
3.3.2 Germano Consistent Decomposition ....................... 59
3.3.3 Germano Identity .......................................... 61
3.3.4 Invariance Properties .................................... 64
3.3.5 Realizability Conditions .................................. 72

3.4 Extension to the Inhomogeneous Case

for the Conventional Approach ................................... 74
3.4.1 Second-Order Commuting Filter ............................... 74
3.4.2 High-Order Commuting Filters ............................... 77

3.5 Filtered Navier–Stokes Equations in General Coordinates ... 77
3.5.1 Basic Form of the Filtered Equations ....................... 77
3.5.2 Simplified Form of the Equations –
Non-linear Terms Decomposition ................................. 78

3.6 Closure Problem ................................................ 78
3.6.1 Statement of the Problem .................................. 78
3.6.2 Postulates ................................................ 79
3.6.3 Functional and Structural Modeling ......................... 80

4. Other Mathematical Models for the Large-Eddy Simulation Problem ........................................ 83
4.1 Ensemble-Averaged Models .................................... 83
4.1.1 Yoshizawa’s Partial Statistical Average Model .......... 83
4.1.2 McComb’s Conditional Mode Elimination Procedure ... 84
4.2 Regularized Navier–Stokes Models ............................. 85
4.2.1 Leray’s Model ................................................ 86
4.2.2 Holm’s Navier–Stokes-α Model .............................. 86
4.2.3 Ladyzenskaja’s Model ........................................ 89

5. Functional Modeling (Isotropic Case) .............................. 91
5.1 Phenomenology of Inter-Scale Interactions ...................... 91
5.1.1 Local Isotropy Assumption: Consequences .................. 92
5.1.2 Interactions Between Resolved and Subgrid Scales ....... 93
5.1.3 A View in Physical Space .................................. 102
5.1.4 Summary ................................................ 104
5.2 Basic Functional Modeling Hypothesis .......................... 104
5.3 Modeling of the Forward Energy Cascade Process ............ 105
5.3.1 Spectral Models ............................................ 105
5.3.2 Physical Space Models ...................................... 109
5.3.3 Improvement of Models in the Physical Space ............. 133
5.3.4 Implicit Diffusion: the ILES Concept ....................... 161
5.4 Modeling the Backward Energy Cascade Process .............. 171
5.4.1 Preliminary Remarks ....................................... 171
### 5.4 Deterministic Statistical Models
- 5.4.2 Deterministic Statistical Models: 172
- 5.4.3 Stochastic Models: 178

### 6. Functional Modeling:
#### Extension to Anisotropic Cases
- 6.1 Statement of the Problem: 187
- 6.2 Application of Anisotropic Filter to Isotropic Flow: 187
  - 6.2.1 Scalar Models: 188
  - 6.2.2 Batten's Mixed Space-Time Scalar Estimator: 191
  - 6.2.3 Tensorial Models: 191
- 6.3 Application of an Isotropic Filter to a Shear Flow: 193
  - 6.3.1 Phenomenology of Inter-Scale Interactions: 193
  - 6.3.2 Anisotropic Models: Scalar Subgrid Viscosities: 198
  - 6.3.3 Anisotropic Models: Tensorial Subgrid Viscosities: 202
- 6.4 Remarks on Flows Submitted to Strong Rotation Effects: 208

### 7. Structural Modeling
- 7.1 Introduction and Motivations: 209
- 7.2 Formal Series Expansions: 210
  - 7.2.1 Models Based on Approximate Deconvolution: 210
  - 7.2.2 Non-linear Models: 223
  - 7.2.3 Homogenization-Technique-Based Models: 228
- 7.3 Scale Similarity Hypotheses and Models Using Them: 231
  - 7.3.1 Scale Similarity Hypotheses: 231
  - 7.3.2 Scale Similarity Models: 232
  - 7.3.3 A Bridge Between Scale Similarity and Approximate Deconvolution Models. Generalized Similarity Models: 236
- 7.4 Mixed Modeling: 237
  - 7.4.1 Motivations: 237
  - 7.4.2 Examples of Mixed Models: 239
- 7.5 Differential Subgrid Stress Models: 243
  - 7.5.1 Deardorff Model: 243
  - 7.5.2 Fureby Differential Subgrid Stress Model: 244
  - 7.5.3 Velocity-Filtered-Density-Function-Based Subgrid Stress Models: 245
  - 7.5.4 Link with the Subgrid Viscosity Models: 248
- 7.6 Stretched-Vortex Subgrid Stress Models: 249
  - 7.6.1 General: 249
  - 7.6.2 S3/S2 Alignment Model: 250
  - 7.6.3 S3/ω Alignment Model: 250
  - 7.6.4 Kinematic Model: 250
- 7.7 Explicit Evaluation of Subgrid Scales: 251
  - 7.7.1 Fractal Interpolation Procedure: 253
  - 7.7.2 Chaotic Map Model: 254
257 Kerstein’s ODT-Based Method
259 Kinematic-Simulation-Based Reconstruction
260 Velocity Filtered Density Function Approach
261 Subgrid Scale Estimation Procedure
263 Multi-level Simulations
272 Direct Identification of Subgrid Terms
274 Linear-Stochastic-Estimation-Based Model
275 Neural-Network-Based Model
276 Implicit Structural Models
278 Local Average Method
278 Scale Residual Model
281 Dynamic Interpretation of the Large-Eddy Simulation
281 Static and Dynamic Interpretations: Effective Filter
283 Theoretical Analysis of the Turbulence Generated by Large-Eddy Simulation
288 Ties Between the Filter and Computational Grid.
290 Numerical Errors and Subgrid Terms
290 Ghosal’s General Analysis
294 Pre-filtering Effect
297 Conclusions
299 Remarks on the Use of Artificial Dissipations
303 Remarks Concerning the Time Integration Method
305 Statement of the Problem
305 Type of Information Contained in a Large-Eddy Simulation
306 Validation Methods
307 Statistical Equivalency Classes of Realizations
310 Ideal LES and Optimal LES
311 Mathematical Analysis of Sensitivities and Uncertainties in Large-Eddy Simulation
313 Correction Techniques
313 Filtering the Reference Data
314 Evaluation of Subgrid-Scale Contribution
315 Evaluation of Subgrid-Scale Kinetic Energy
318 Practical Experience
323 General Problem
323 Mathematical Aspects
323 Physical Aspects
### 10.2 Solid Walls
- **Statement of the Problem**: 326
- **A Few Wall Models**: 332
- **Wall Models: Achievements and Problems**: 351

### 10.3 Case of the Inflow Conditions
- **Required Conditions**: 354
- **Inflow Condition Generation Techniques**: 354

### 11. Coupling Large-Eddy Simulation with Multiresolution/Multidomain Techniques
- **Statement of the Problem**: 369
- **Methods with Full Overlap**
  - One-Way Coupling Algorithm: 372
  - Two-Way Coupling Algorithm: 372
  - FAS-like Multilevel Method: 373
  - Kravchenko et al. Method: 374
- **Methods Without Full Overlap**: 376
- **Coupling Large-Eddy Simulation with Adaptive Mesh Refinement**
  - Statement of the Problem: 377
  - Error Estimation: 378

### 12. Hybrid RANS/LES Approaches
- **Motivations and Presentation**: 383
- **Zonal Decomposition**
  - Statement of the Problem: 384
  - Sharp Transition: 385
  - Smooth Transition: 387
  - Zonal RANS/LES Approach as Wall Model: 388
- **Nonlinear Disturbance Equations**: 390
- **Universal Modeling**
  - Germano’s Hybrid Model: 392
  - Speziale’s Rescaling Method and Related Approaches: 393
  - Baurle’s Blending Strategy: 394
  - Arunajatesan’s Modified Two-Equation Model: 396
  - Bush–Mani Limiters: 397
  - Magagnato’s Two-Equation Model: 398
- **Toward a Theoretical Status for Hybrid RANS/LES Approaches**: 399

### 13. Implementation
- **Filter Identification. Computing the Cutoff Length**: 401
- **Explicit Discrete Filters**
  - Uniform One-Dimensional Grid Case: 404
  - Extension to the Multi-Dimensional Case: 407
A. Statistical and Spectral Analysis of Turbulence ............. 495
   A.1 Turbulence Properties ..................................... 495
   A.2 Foundations of the Statistical Analysis of Turbulence .... 495
      A.2.1 Motivations .......................................... 495
      A.2.2 Statistical Average: Definition and Properties ....... 496
      A.2.3 Ergodicity Principle .................................. 496
      A.2.4 Decomposition of a Turbulent Field ................... 498
      A.2.5 Isotropic Homogeneous Turbulence .................... 499
   A.3 Introduction to Spectral Analysis
      of the Isotropic Turbulent Fields ........................... 499
      A.3.1 Definitions .......................................... 499
      A.3.2 Modal Interactions .................................... 501
      A.3.3 Spectral Equations .................................... 502
   A.4 Characteristic Scales of Turbulence .......................... 504
   A.5 Spectral Dynamics of Isotropic Homogeneous Turbulence .... 504
      A.5.1 Energy Cascade and Local Isotropy ..................... 504
      A.5.2 Equilibrium Spectrum .................................. 505

B. EDQNM Modeling ................................................. 507
   B.1 Isotropic EDQNM Model ..................................... 507
   B.2 Cambon's Anisotropic EDQNM Model .......................... 509
   B.3 EDQNM Model for Isotropic Passive Scalar .................. 511

Bibliography .................................................................. 513

Index ............................................................................. 553
Large Eddy Simulation for Incompressible Flows
An Introduction
Sagaut, P.
2006, XXIX, 558 p., Hardcover
ISBN: 978-3-540-26344-9
