<b>1 Extreme Events: Magic, Mysteries, and Challenges</b>	
<i>Volker Jentsch, Holger Kantz, Sergio Albeverio</i> .....	1
1.1 Why Study Xevents? .....	1
1.2 What are Xevents? A First Approach .....	2
1.3 What are Xevents? A Second Approach .....	3
1.3.1 Statistical Characterisation of Xevents .....	4
1.3.2 Dynamic Characterisation of Xevents .....	4
1.3.3 Shaping Evolution .....	5
1.3.4 Commonalities, Analogies, Universality .....	5
1.3.5 Prediction, Anticipation and Management .....	6
1.3.6 Trends .....	7
1.3.7 Building Models .....	7
1.3.8 Observations .....	8
1.3.9 Risk .....	8
1.4 How the Book is Organised .....	9
1.4.1 Background .....	9
1.4.2 Rationale .....	9
1.4.3 The Articles .....	10
1.5 Outlook: Research Programme .....	17
References .....	18

---

## Part I General Considerations

---

<b>2 Anticipating Extreme Events</b>	
<i>Mihai Nadin</i> .....	21
2.1 The Representation of Extreme Events .....	21
2.2 From Signs to Anticipation .....	23
2.3 Descartes Rehabilitated .....	25
2.4 Time, Clocks, Rhythms .....	26
2.5 The Hybrid Solution .....	28
2.6 Can a Computer Simulate Anticipation? .....	35
2.7 A New Equilibrium .....	36
2.8 A Holistic View .....	40
References .....	43

### 3 Mathematical Methods and Concepts for the Analysis of Extreme Events

<i>Sergio Albeverio, Vladimir Piterbarg</i> . . . . .	47
3.1 Introduction . . . . .	47
3.2 Statistical Extreme Value Theory . . . . .	48
3.2.1 Origins: Classical Univariate Case . . . . .	48
3.2.2 Dependent Data . . . . .	50
3.3 Extremes in Continuous Time: Stochastic Processes, Random Fields . . . . .	52
3.3.1 Probabilities of Large Deviations: Exact Behaviour . . . . .	53
3.3.2 Maxima and Excursions of Gaussian and Related Processes and Fields . . . . .	56
3.3.3 Relationship Between Continuous and Discrete Time: Prediction of Extremes . . . . .	58
3.3.4 Other Problems . . . . .	60
3.4 Extremes and Statistical Mechanics . . . . .	61
3.5 Extremes and Dynamical Systems . . . . .	62
3.6 Mapping Singularities and Catastrophe Theory: How Can They Be Related to Xevents? . . . . .	63
References . . . . .	65

### 4 Dynamical Interpretation of Extreme Events: Predictability and Predictions

<i>Holger Kantz, Eduardo G. Altmann, Sarah Hallerberg, Detlef Holstein, Anja Riegert</i> . . . . .	69
4.1 Introduction . . . . .	69
4.2 Prediction versus Predictability . . . . .	72
4.2.1 Predictability . . . . .	74
4.2.2 Prediction Schemes for Deterministic and Stochastic Time Series . . . . .	80
4.2.3 Predictions Based on Markov Chain Models . . . . .	82
4.3 An Example: Turbulent Wind Gusts . . . . .	84
4.4 Conclusions . . . . .	90
References . . . . .	93

### 5 Endogenous versus Exogenous Origins of Crises

<i>Didier Sornette</i> . . . . .	95
5.1 Introduction . . . . .	95
5.2 Exogenous and Endogenous Shocks in Social Networks . . . . .	97
5.2.1 A Simple Epidemic Cascade Model of Social Interactions . . . . .	98
5.2.2 Internet Download Shocks . . . . .	100
5.2.3 Book Sale Shocks . . . . .	102
5.2.4 Social Shocks . . . . .	107

5.3 Exogenous and Endogenous Shocks in Financial Markets . . . . . 109  
 5.3.1 Volatility Shocks . . . . . 109  
 5.3.2 Financial Crashes . . . . . 112  
 5.4 Concluding Remarks . . . . . 114  
 References . . . . . 116

**Part II Scenarios**

**6 Epilepsy: Extreme Events in the Human Brain**

*Klaus Lehnertz* . . . . . 123  
 6.1 Introduction . . . . . 123  
 6.2 Basic Mechanisms . . . . . 124  
 6.3 EEG and Epilepsy . . . . . 126  
 6.4 Nonlinear EEG Analysis . . . . . 128  
 6.4.1 State Space Reconstruction . . . . . 129  
 6.4.2 Measures Based on the Correlation Sum . . . . . 130  
 6.4.3 Lyapunov Exponents . . . . . 131  
 6.4.4 Synchronization and Interdependencies . . . . . 132  
 6.4.5 Testing for Nonlinearity . . . . . 134  
 6.5 Can Epileptic Seizures Be Anticipated? . . . . . 135  
 6.6 Can Epileptic Seizures Be Controlled? . . . . . 138  
 6.7 Conclusions . . . . . 140  
 References . . . . . 141

**7 Extreme Events in the Geological Past**

*Jürgen Herget* . . . . . 145  
 7.1 Introduction . . . . . 145  
 7.2 Extreme Events in the Geological Past . . . . . 146  
 7.2.1 Events Driven by Plate Tectonics . . . . . 146  
 7.2.2 Changes in the Earth’s Magnetic Field . . . . . 149  
 7.2.3 Periods and Cycles of Ice Ages . . . . . 151  
 7.2.4 Volcanism . . . . . 153  
 7.2.5 Earthquakes . . . . . 154  
 7.2.6 Meteoritic Impacts . . . . . 155  
 7.2.7 Floods . . . . . 157  
 7.3 Predictions and Forecasts on the Geological Timescale . . . . . 159  
 7.4 Research Perspectives . . . . . 161  
 References . . . . . 164

**8 Wind and Precipitation Extremes  
 in the Earth’s Atmosphere**

*Andreas Hense, Petra Friederichs* . . . . . 169  
 8.1 Introduction . . . . . 169  
 8.2 Atmospheric Scales . . . . . 170

8.3	Wind Extremes . . . . .	172
8.3.1	Small-Scale Extremes . . . . .	172
8.3.2	Mesoscale Extremes . . . . .	175
8.3.3	Tropical Cyclones . . . . .	177
8.3.4	Extratropical Cyclones . . . . .	179
8.3.5	Jet Streams . . . . .	179
8.4	Precipitation Extremes . . . . .	181
8.5	Discussion . . . . .	186
	References . . . . .	187

**9 Freak Ocean Waves and Refraction of Gaussian Seas**

	<i>Eric J. Heller</i> . . . . .	189
9.1	Introduction . . . . .	189
9.2	Gaussian Seas . . . . .	192
9.3	Refraction . . . . .	194
9.4	Refraction and Gaussian Seas . . . . .	197
9.5	Structure of the Density Fluctuations . . . . .	200
9.5.1	Phase Space and Real Space . . . . .	200
9.5.2	Runners and Rooster Tails . . . . .	202
9.5.3	Diffusion and the Freak Index . . . . .	203
9.6	Implications for Wave Statistics . . . . .	204
9.6.1	Nonuniform Sampling . . . . .	204
9.6.2	Freak Wave Events . . . . .	206
9.6.3	Statistical Evidence . . . . .	206
9.7	Conclusions . . . . .	208
	References . . . . .	209

**10 Predicting the Lifetime of Steel**

	<i>Matz Haaks, Karl Maier</i> . . . . .	211
10.1	Introduction . . . . .	211
10.2	The Search for Defects: Positrons in Solids . . . . .	212
10.3	The Bonn Positron Microprobe . . . . .	217
10.4	Detection of Plastic Deformation . . . . .	217
10.5	Damage Prediction . . . . .	222
10.6	Summary . . . . .	230
	References . . . . .	230

**11 Computer Simulations of Opinions and their Reactions to Extreme Events**

	<i>Santo Fortunato, Dietrich Stauffer</i> . . . . .	233
11.1	Introduction . . . . .	233
11.2	General Opinion Dynamics . . . . .	234
11.2.1	The D Model . . . . .	235
11.2.2	The KH Model . . . . .	238
11.2.3	The S Model . . . . .	240

11.3 Damage Spreading ..... 241  
 11.3.1 Continuous Opinions ..... 243  
 11.3.2 Discrete Opinions ..... 250  
 11.4 Discussion ..... 255  
 References ..... 256

**12 Networks of the Extreme: A Search for the Exceptional**

*Philippe Blanchard, Tyll Krüger* ..... 259  
 12.1 Extreme Events in Complex Systems  
 and Our Perception of Them ..... 259  
 12.2 A Short Survey of Scale-Free Networks ..... 261  
 12.3 Cameo Graphs ..... 262  
 12.4 How Extremists Determine the Structures  
 of Scale-Free Graphs ..... 266  
 12.5 Spreading of Epidemics in Scale-Free Networks  
 and Robustness Under Random Attack ..... 269  
 12.6 Conclusions and Outlook ..... 271  
 12.7 Appendix ..... 272  
 References ..... 273

---

**Part III Prevention, Precaution, and Avoidance**

---

**13 Risk Management and Physical Modelling  
 for Mountainous Natural Hazards**

*Michael Lehning, Christian Wilhelm* ..... 277  
 13.1 Introduction ..... 277  
 13.2 Risk Management Example for Mountain Roads ..... 278  
 13.2.1 Integral Risk Management ..... 278  
 13.2.2 Cost – Benefit Framework for Traffic Protection  
 against Natural Hazards ..... 278  
 13.2.3 Case Study: Flüela Pass, Switzerland ..... 280  
 13.3 Physical Modelling of Alpine Surface Processes  
 to Support Natural Hazard Forecasting ..... 284  
 13.3.1 Summary of Alpine Surface Processes ..... 286  
 13.3.2 Estimating Snow Cover Development and Snow Stability .. 287  
 13.3.3 Improvement in Extreme Runoff Forecasts  
 from Alpine Catchments ..... 289  
 13.4 Conclusions ..... 290  
 References ..... 292

**14 Prevention of Surprise**

*Zuzana Chladná, Elena Moltchanova, Michael Obersteiner* ..... 295  
 14.1 Introduction ..... 295  
 14.2 Dynamic Model ..... 298  
 14.2.1 Possible Strategies ..... 300

14.2.2 Numerical Results ..... 301  
 14.2.3 Conclusions ..... 306  
 14.3 Static Model ..... 306  
     14.3.1 Set-Up ..... 307  
     14.3.2 Two Societies Game ..... 307  
     14.3.3 Erroneous Expectations ..... 311  
 14.4 Discussion ..... 314  
 References ..... 317

**15 Disasters as Extreme Events and the Importance  
of Network Interactions for Disaster Response Management**

*Dirk Helbing, Hendrik Ammoser, Christian Kühnert* ..... 319  
 15.1 Disasters as Extreme Events ..... 319  
 15.2 Examples of Causality Chains and Cascade Effects ..... 321  
     15.2.1 Earthquakes ..... 321  
     15.2.2 Power Blackouts ..... 322  
     15.2.3 Hurricanes, Snowstorms, and Floods ..... 324  
     15.2.4 Terrorist Attacks ..... 327  
     15.2.5 Epidemics ..... 328  
     15.2.6 Other Disasters ..... 330  
     15.2.7 Secondary and Tertiary Disasters ..... 331  
     15.2.8 Common Elements of Disasters ..... 332  
 15.3 Modeling Causality Networks of Disaster Spreading ..... 334  
     15.3.1 Assessment of Disaster Management Methods ..... 337  
     15.3.2 System Dynamics Treatment of the Spread of a Disaster .. 343  
 15.4 Summary and Conclusions ..... 345  
 References ..... 346

**Index** ..... 349
