Foreword ........................................................................................................................................ V
Preface .......................................................................................................................................... VII
List of Contributors .................................................................................................................. XIX

## Part I – Environmental Policies and Key Drivers for Setting Standards and Thresholds

1 Principles and Purposes of Standards and Thresholds in the EIA Process... 3
   *John Glasson*
   - 1.1 Introduction .................................................................................................................... 3
   - 1.2 Thresholds and Standards – Definitions and Dimensions ......................................... 4
   - 1.3 Environmental Impact Assessment .............................................................................. 6
   - 1.4 Standards and Thresholds in the EIA Process ............................................................. 7
   - 1.5 Thresholds and Standards in the Screening Stage –
     a More in Depth Review .................................................................................................. 10
   - 1.6 Conclusions and Recommendations ...................................................................... 16

2 Standards and Thresholds in German Environmental Law............... 19
   *Eike Albrecht*
   - 2.1 Introduction .................................................................................................................. 19
   - 2.2 Functions of Thresholds and Standards in German Environmental Law .................... 20
   - 2.3 Main Limitations of Standards and Thresholds in German Environmental Law .......... 21
   - 2.4 Sources of Standards and Thresholds ........................................................................ 23
   - 2.5 Standards and Thresholds in Federal Emission Control Law ..................................... 26
   - 2.6 Standards and Thresholds in Federal Soil Protection Law ......................................... 27
   - 2.7 Conclusions and Recommendations ........................................................................ 30

3 Standards and Thresholds for EA in Highly Polluted Areas – The Approach of Ukraine .............................. 33
   *Dmytro Palekhov, Michael Schmidt and Gennady Pivnyak*
   - 3.1 Introduction .................................................................................................................. 33
   - 3.2 Basic Directions in Development of Ukrainian Environmental Policies .................... 34
   - 3.3 Standards and Thresholds in Ukrainian Practice ......................................................... 35
   - 3.4 Norms for Quality of the Atmospheric Air ................................................................. 39
   - 3.5 Conclusions and Recommendations ....................................................................... 44
4 Poverty and Disease Remediation in the Millennium Development Goals: Time for Kenya to Set Standards and Thresholds? ........................................ 49  
Vincent Onyango and Michael Schmidt  
4.1 Introduction .......................................................................................... 49  
4.2 The Millennium Development Goals ...................................................... 50  
4.3 Implementation of MDGs in Kenya: Target Setting ............................. 51  
4.4 Need and Justification for Standards and Thresholds ........................... 54  
4.5 Discussion ............................................................................................. 58  
4.6 Conclusions and Recommendations ...................................................... 59  

5 Widening the Scope – Sustainability Indicators, Legal Thresholds and Standards in Portugal ............................................................................. 63  
Anastássios Perdicoúlis  
5.1 Introduction........................................................................................... 63  
5.2 Standards and Thresholds...................................................................... 64  
5.3 Indicator and Information Systems ....................................................... 66  
5.4 Analysis................................................................................................. 70  
5.5 Discussion ............................................................................................. 72  
5.6 Conclusions and Recommendations...................................................... 73  

6 Problems in Setting Thresholds ............................................................... 75  
Reinhart Bartsch  
6.1 Introduction........................................................................................... 75  
6.2 Assessing Target Functions, Benefits and Costs of Ecological Measures Incorrectly .......................................................... 76  
6.3 Conclusions and Recommendations.................................................... 84  

Part II – Thresholds and Standards for Different Types of Projects .......... 87  
Part IIa – Thresholds and Standards for Site-Specific Projects ................. 87  

7 Requirements on EIA Quality Management ............................................ 89  
Joachim Hartlik  
7.1 Introduction........................................................................................... 89  
7.2 Quality Requirements on EIA-Procedure .............................................. 90  
7.3 Quality Requirements on EIS ................................................................. 93  
7.4 The Role of Standards and Thresholds within Quality Management .. 101  
7.5 Conclusions and Recommendations.................................................... 102
8 Environmental Impact Assessment Standards and Thresholds for Sanitary Landfills ........................................................... 103  
* Cem B. Avci and Erol Güler  
  8.1 Introduction ..................................................................................... 103  
  8.2 Regulatory Overview ........................................................................ 103  
  8.3 EIA Standards and Thresholds ........................................................... 104  
  8.4 Conclusions and Recommendations .................................................. 110  

9 Standards and Thresholds for Waste Water Discharges in Mexico .......... 113  
* Constantino Gutiérrez  
  9.1 Introduction ..................................................................................... 113  
  9.2 Standards Antecedents ....................................................................... 114  
  9.3 Standards for Discharges into Surface and Groundwater .................... 117  
  9.4 Standards for Discharges into Municipal Sewerage ............................ 119  
  9.5 Standards for Reuse Treated Wastewater .......................................... 121  
  9.6 Standards for Sludge Disposal ........................................................... 122  
  9.7 Experiences in Ten Years of Application ........................................... 123  
  9.8 Conclusions and Recommendations .................................................. 124  

10 Standards for Wastewater Treatment in Brazil ....................................... 125  
* Marcos von Sperling  
  10.1 Introduction ................................................................................... 125  
  10.2 Quality Standards for Water Bodies in Brazil ................................... 127  
  10.3 Discharge Standards in Brazil ........................................................... 130  
  10.4 Progressive Implementation of the Standards ................................... 131  
  10.5 Conclusions and Recommendations .................................................. 132  

11 Standards for and Evaluation of Small-Scale Dam Projects in Yemen ... 133  
* Michael Schmidt, Fadhl Al-Nozaily and Amer Al-Ghorbany  
  11.1 Introduction ................................................................................... 133  
  11.2 Need for Dams in Yemen ................................................................. 133  
  11.3 Dams' Water Uses and Guidelines ................................................... 134  
  11.4 Dams and Water Quality Deterioration ............................................. 137  
  11.5 EIA Practice at PWP in Yemen ......................................................... 140  
  11.6 Conclusions and Recommendations .................................................. 143  

12 The Need for Developing Thresholds for the Recycling Rate of Products in Thailand ........................................................... 145  
* Angkarn Wongdeethai and Jürgen Ertel  
  12.1 Introduction ................................................................................... 145  
  12.2 Challenges and Opportunities ......................................................... 147  
  12.3 Which Products Should be Concerned? ............................................ 150  
  12.4 Who will be Affected from the Implementation? ................................. 151
12.5 Methods to Fulfil the Requirements for Developing Thresholds for Recycling Rate of Products .......................................................... 152
12.6 Conclusions and Recommendations ............................................. 155

13 Guidelines for SEA in Marine Spatial Planning for the German Exclusive Economic Zone (EEZ) – with Special Consideration of Tiering Procedure for SEA and EIA ........................................ 157
Juliane Albrecht

13.1 Introduction ................................................................................. 157
13.2 Legal Peculiarities of Marine Spatial Planning in the German EEZ. 158
13.3 The Importance of Offshore Wind Use for Marine Spatial Planning in the EEZ ................................................................. 159
13.4 The Requirements of SEA of Spatial Structure Planning in the EEZ .................................................................................... 160
13.5 Methodology and Standards for Application of the SEA in the EEZ ................................................................................... 161
13.6 Criteria for Avoiding Duplication of SEA and EIA:
the Example of Offshore Wind Energy Use (Tiering) ...................... 165
13.7 Conclusions and Recommendations ............................................. 168

14 Standards of Implementing Renewable Energy Technologies in Cameroon ......................................................................................... 171
Ernestine A. Tangang Yuntenwi, Victor Ngu Cheo and Jürgen Ertel

14.1 Introduction ................................................................................. 171
14.2 Institutional Framework of the Ministry of Energy and Water and EIA Procedures in Cameroon ..................................................... 174
14.3 Global Efforts to Mitigate Problems Caused By RET ...................... 178
14.4 Standards and Thresholds for Mitigating Indoor Air Pollution from Biomass Use ................................................................. 179
14.5 Conclusions and Recommendations ............................................. 182

15 Standards for Mining and Quarrying .............................................. 185
Stanislaw Gruszczyński

15.1 Introduction ................................................................................. 185
15.2 Factors of Impact ........................................................................ 186
15.3 Symptoms of Significant Environmental Threat ......................... 190
15.4 Mining and EIA ......................................................................... 196
15.5 Conclusions and Recommendations ............................................. 199
Part IIb – Thresholds and Standards for Spatially Dispersed Projects

16 Thresholds and Standards for Tourism Environmental Impact Assessment

Ralf Buckley

16.1 Introduction
16.2 EIA for Different Types of Tourism
16.3 Holiday Housing Clusters
16.4 Tourism and Protected Areas
16.5 Conclusions and Recommendations

17 Spatial Planning: Indicators to Assess the Efficiency of Land Consumption and Land-Use

Harry Storch and Michael Schmidt

17.1 Introduction
17.2 Land Consumption: Actual Trends in Germany
17.3 Efficiency Indicators for Land Use and their Impacts
17.4 Linking Indicators to Urban Development Models
17.5 Conclusions and Recommendations

18 EIA Performance Standards and Thresholds for Sustainable Forest Management in Ghana

Edward K. Nunoo

18.1 Introduction
18.2 Country Background
18.3 EIA and Institutional Framework in Ghana
18.4 Standards and Thresholds of Significance
18.5 Conclusions and Recommendations

Part III – Thresholds and Standards for Environmental Media

19 Critical Loads and Levels Concept for Ecosystems

Robert Mayer

19.1 Introduction
19.2 Research in Dynamic Environmental Systems
19.3 New Instruments in Environmental Policy
19.4 The Concept of Critical Loads and Levels
19.5 Advantages of Using the Critical Loads and Level Concept
19.6 The Deduction of Critical Loads and Legislation in Germany
19.7 Conclusions and Recommendations
20 Soil Standards and Thresholds.......................................................... 253
Robert Mayer

20.1 Introduction................................................................................... 253
20.2 Standards for Soil Protection.......................................................... 253
20.3 Standards for the Protection from Soil-Mediated Hazards.............. 255
20.4 Soil Standards and Threshold Values under Various Acts in
    Germany....................................................................................... 256
20.5 Conclusions and Recommendations.............................................. 260

21 Soil Background and Reference Values for PAH and PCB................. 263
Jürgen Ritschel

21.1 Introduction................................................................................... 263
21.2 Determination of Terms and Fundamentals of Assessment .......... 264
21.3 Taking Samples and Status Report on Soil Site Parameters.......... 265
21.4 Implementation of Pot Trials and Taking Samples in the Field....... 266
21.5 Results......................................................................................... 267
21.6 Conclusions and Recommendations.............................................. 275

22 Standards and Indicators for Monitoring Impact of Disturbance on
Biodiversity in a Post-Mining Area Using GIS .................................... 277
Effah Kwabena Antwi and Gerhard Wiegleb

22.1 Introduction................................................................................... 277
22.2 Materials and Methods................................................................. 280
22.3 Data Acquisition and Spatial Database......................................... 280
22.4 Results......................................................................................... 284
22.5 Diversity and Interspersion Metrics............................................. 286
22.6 Discussions................................................................................ 286
22.7 Conclusions and Recommendations.............................................. 288

23 Air Pollution and Climate: Standards for Particulate Matter.......... 291
Matti Johansson

23.1 Introduction................................................................................... 291
23.2 Integrated Assessment................................................................. 292
23.3 Air Quality Guidelines................................................................. 296
23.4 Conclusions and Recommendations.............................................. 298

24 Standards and Thresholds of the EU Water Framework Directive
(WFD) – Phytoplankton and Lakes..................................................... 301
Brigitte Nixdorf, Atis Rektins and Ute Mischke

24.1 Introduction................................................................................... 301
24.2 WFD — Aim and Present State of the Implementation............... 302
24.3 Main Objectives of WFD and Intercalibration........................... 303
24.4 Biological Quality Elements and Ecological Status.................... 305

# Table of Contents

## 28 Management of Dams in Trans-National River Basins – a Preliminary Sustainability Impact Assessment for the Upper Elbe River Basin ....... 355
*Martin Socher, Stefan Dornack and Hans Ulrich Sieber*

- 28.1 Introduction ................................................................. 355
- 28.2 The Method of SIA .......................................................... 356
- 28.3 Dam Systems of the Upper Elbe River Basin, the Moldau Cascade and Saxon Dams in Tributaries from the Ore Mountains and the Saxon Switzerland ........................................... 358
- 28.4 Screening and Scoping .................................................... 364
- 28.5 Preliminary Assessment .................................................... 365
- 28.6 Conclusions and Recommendations .............................. 367

## Part IV – Examples of Emerging Issues ................................................. 369

## 29 Environmental Impact of Nano Technology on Human Health........ 371
*Amoah Benedicta and Jürgen Ertel*

- 29.1 Introduction ................................................................. 371
- 29.2 Research Approach ....................................................... 372
- 29.3 Application of Nanotechnology ........................................ 372
- 29.4 Impact of Nanotechnology on Human Health ................. 373
- 29.5 Technical Suitability of Nanotechnology ......................... 375
- 29.6 The Need for Environmental Impact Assessment ............... 376
- 29.7 Conclusions and Recommendations .............................. 377

## 30 Ecotoxicological Risk of Human Pharmaceuticals in Brandenburg Surface Waters? ................................................................. 379
*Werner Kratz*

- 30.1 Introduction ................................................................. 379
- 30.2 For Which Pharmaceutical Active Substances Can a Risk Assessment be Accomplished? .............................................. 380
- 30.3 Which Concentrations are to be Expected from these Active Substances in Brandenburg’s Surface Waters and Which are Already Proven? .................................................. 380
- 30.4 Which Active Agent Concentrations Adversely Affect the Aquatic Ecosystem? .......................................................... 382
- 30.5 For Which Pharmaceutical Active Substance Does an Ecotoxicological Risk Exist? .................................................. 385
- 30.6 Conclusions and Recommendations .............................. 388

## 31 Environmental Oxygenology and Related Thresholds and Standards.... 391
*Witold Stepniewski and Agnieszka Rozej*

- 31.1 Introduction ................................................................. 391
- 31.2 Thresholds and Standards Related to Dioxygen (O₂) .......... 392
- 31.3 Thresholds and Standards Related to Thrioxygen (O₃) ........... 396
