### Part A  Introduction

1  **Introduction** ...................................................... 3  
   J. Nösberger and S.P. Long

1.1  Managed Ecosystems and the Future Supply of Raw Materials ...................................................... 3
1.2  Why are $[\text{CO}_2]$ Enrichment Studies with Managed Ecosystems Important? ...................................................... 4
1.3  Free-Air $[\text{CO}_2]$ Enrichment ...................................................... 6
1.4  Spatial and Temporal Scale ...................................................... 7
1.5  Elevated $[\text{CO}_2]$ Affects Plant Growth and Ecosystems via a Multitude of Mechanisms ...................................................... 9
1.6  Conclusions ...................................................... 12

References ...................................................... 12

2  **FACE Technology: Past, Present, and Future** ...................................................... 15  
   G.R. Hendrey and F. Miglietta

2.1  Introduction ...................................................... 15
2.2  Need for Controlled Experiments in the Field:  
   Historical Perspective ...................................................... 17
2.3  Advantages of FACE ...................................................... 21
2.4  Problems and Limitations ...................................................... 21
2.4.1  $\text{CO}_2$ as a Step Treatment ...................................................... 22
2.4.2  High-Frequency Variation in $[\text{CO}_2]$ ...................................................... 23
2.4.3  Limited Plot Size ...................................................... 24
2.4.4 Blower Effect .................................................. 24
2.5 FACE Systems Engineering ................................. 25
   2.5.1 Historical Perspective .................................. 25
   2.5.2 BNL FACE Design ....................................... 26
   2.5.3 CNR FACE Design ....................................... 28
   2.5.4 Web-FACE ................................................. 29
2.6 Multiple Variable Experiments ............................ 30
2.7 Future Perspectives .......................................... 32
   2.7.1 The GradFACE Design ................................. 32
   2.7.2 HotFACE .................................................. 34
2.8 Conclusions .................................................. 37
References ......................................................... 39

Part B Case Studies

3 The Effects of Free-Air [CO₂] Enrichment of Cotton, Wheat, and Sorghum .............................. 47
   B.A. KIMBALL

   3.1 Introduction .................................................. 47
   3.2 Description of the FACE System and Experimental Methodology .............................. 47
   3.3 Cotton .......................................................... 51
      3.3.1 Resource Availability .................................. 51
      3.3.2 Resource Acquisition and Transformation ............................... 52
         3.3.2.1 CO₂ and Carbon ..................................... 52
         3.3.2.2 Light ................................................. 58
         3.3.2.3 Water ............................................... 58
         3.3.2.4 Nutrients ........................................... 59
      3.3.3 Consequences for Management .................................. 59
      3.3.4 Consequences for Plant Breeding ................................ 60
   3.4 Wheat .......................................................... 60
      3.4.1 Resource Availability .................................... 60
      3.4.2 Resource Acquisition and Transformation .................................. 62
         3.4.2.1 CO₂ and Carbon .................................... 62
         3.4.2.2 Water .............................................. 62
         3.4.2.3 Nutrients .......................................... 63
      3.4.3 Consequences for Management .................................. 63
      3.4.4 Consequences for Plant Breeding ................................ 64
   3.5 Sorghum .......................................................... 64
5 Paddy Rice Responses to Free-Air [CO₂] Enrichment . . . . 87
K. Kobayashi, M. Okada, H.Y. Kim, M. Lieffering, 
S. Miura, and T. Hasegawa

5.1 Introduction to Rice . . . . . . . . . . . . . . . . . . . . . . 87
5.2 The Rice FACE Experiment: Phase 1 . . . . . . . . . . . . . 88
5.2.1 Site Description, Plot Layout and Crop Management . . . 88
5.2.2 Experimental Treatments . . . . . . . . . . . . . . . . . . . 89
5.2.2.1 [CO₂] Enrichment . . . . . . . . . . . . . . . . . . . . . . . . 89
5.2.2.2 N Fertilizer Application . . . . . . . . . . . . . . . . . . . . 89
5.3 Effects of e[CO₂] on Paddy Rice . . . . . . . . . . . . . . . . 89
5.3.1 Effects on Resource Acquisition . . . . . . . . . . . . . . . 89
5.3.1.1 Phenology . . . . . . . . . . . . . . . . . . . . . . . . . . . . 89
5.3.1.2 Light Capture by Leaves . . . . . . . . . . . . . . . . . . . . 90
5.3.1.3 Leaf Photosynthesis . . . . . . . . . . . . . . . . . . . . . . . 91
5.3.1.4 Root Development . . . . . . . . . . . . . . . . . . . . . . . 92
5.3.1.5 Tillering . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 93
5.3.1.6 Accumulation of Plant Biomass and Nitrogen . . . . . . . 93
5.3.2 Effects on Resource Transformation . . . . . . . . . . . . . 95
5.3.2.1 Distribution of Plant Biomass and N 
During Reproductive Growth . . . . . . . . . . . . . 95
5.3.2.2 Grain Yield, Yield Components and Harvest Index . . . . . 96
5.3.2.3 Grain Quality . . . . . . . . . . . . . . . . . . . . . . . . . . 97
5.3.3 Synthesis of Rice Plant Responses to e[CO₂] 
and N Fertilization . . . . . . . . . . . . . . . . . . . . . . . . 98
5.4 Implications for Rice Production in e[CO₂] . . . . . . . . . . 100
5.4.1 Prediction of Global Change Impacts . . . . . . . . . . . . 100
5.4.2 Adaptations to e[CO₂] . . . . . . . . . . . . . . . . . . . . . . 101
5.5 Conclusions . . . . . . . . . . . . . . . . . . . . . . . . . . . . 102
References . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 103

6 Growth and Quality Responses of Potato to Elevated [CO₂] . 105
M. Bindi, F. Miglietta, F. Vaccari, E. Magliulo, 
and A. Giuntoli

6.1 Introduction . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 105
6.2 Site Description . . . . . . . . . . . . . . . . . . . . . . . . . . . 106
6.2.1 Physical: Location, Size, Elevation, Layout of Experiment 
and Blocking . . . . . . . . . . . . . . . . . . . . . . . . . 106
6.2.2 Soil Types, Tillage Practices, Fertilisation, 
Crop Samplings and Measurements . . . . . . . . . . . . . . 106
10 Responses to Elevated [CO₂] of a Short Rotation, Multispecies Poplar Plantation: the POPFACE/EUROFACE Experiment

10.1 Introduction ......................................................... 173
10.1.1 Research Leading to This Experiment ......................... 173
10.1.2 Focus on Agroforestry Plantations ............................ 173
10.1.3 Objectives and Hypotheses .................................... 174
10.2. Site Description .................................................. 174
10.2.1 Location and Layout of Experiment ............................ 174
10.2.2 Soil Types, Fertilisation, Irrigation ............................ 176
10.2.3 Meteorological Description .................................... 176
10.2.4 Stand History and Description ................................ 177
10.3. Experimental Treatment ......................................... 177
10.3.1 Atmospheric [CO₂] Enrichment ................................ 177
10.3.2 Nitrogen Fertilisation .......................................... 178
10.3.3 Species Comparison ............................................ 178
10.3.4 Interactions ...................................................... 178
10.4 Resource Acquisition .............................................. 179
10.4.1 Photosynthesis and Respiration ................................. 179
10.4.2 Stomatal Conductance ......................................... 181
10.4.3 Nitrogen and Other Nutrient Concentrations and Dynamics 181
10.4.4 LAI and Light Interception .................................... 182
10.4.5 Canopy Architecture .......................................... 184
10.4.6 Root Development and Mycorrhizal Colonization .......... 184
10.5 Resource Transformation ........................................... 185
10.5.1 Aboveground Productivity .................................... 185
10.5.2 Belowground Productivity .................................... 185
10.5.3 Soil Carbon: Litter Production, Soil Respiration and C-Pools 188
10.5.4 Wood Quality and Biochemical Composition of Wood and Roots 189
10.5.5 Pest and Disease Susceptibility ................................ 189
10.6 Consequences and Implications .................................. 190
10.6.1 Forest Management ............................................ 190
10.6.2 Global Carbon Cycle .......................................... 190
10.6.3 Other Ecosystem Goods and Services ........................ 191
10.7 Conclusions .......................................................... 192

Part C Processes

14 Long-Term Responses of Photosynthesis and Stomata to Elevated [CO₂] in Managed Systems .......................... 253

14.1 Introduction ......................................................... 253
14.1.1 The Theory of Responses of Photosynthesis and Stomatal Conductance to Elevated [CO₂] ............ 253
14.1.2 Chamber Acclimation and Down-Regulation of Photosynthesis ................................................. 256
14.1.3 A Purpose to Down-Regulation of Photosynthesis and Stomatal Conductance? ...................... 257
14.1.4 Expectations of FACE ........................................... 258
14.2 Why FACE for Photosynthesis and Conductance? ................. 258
14.3 Which FACE? ...................................................... 260
14.4 Have Findings From FACE Altered Perspectives? .......... 262
14.4.1 Photosynthesis is Increased Less and Stomatal Conductance Decreased More in FACE .......... 262
14.4.2 Photosynthesis is Stimulated Less at the Beginning and End of the Day .............................. 262
14.4.3 Stimulation of Photosynthesis is Sustained and Little Affected by Nitrogen Supply ............... 263
14.4.4 In Vivo Rubisco Activity is Decreased More than Capacity for RubP Regeneration ............. 265
14.5 Conclusion .......................................................... 266
References .................................................................. 267

15 Carbon Partitioning and Respiration – Their Control and Role in Plants at High CO₂ ................. 271

15.1 Introduction ......................................................... 271
15.2 A Brief Background to Partitioning of Dry Matter and Carbon ..................................................... 272
15.3 Export From Source Leaves ........................................ 273
15.4 Whole-Plant Partitioning ........................................... 275
15.4.1 Growth and Development ................................. 277
15.5 Within Root Partitioning ........................................... 278
15.5.1 Roots are a Sink for Photosynthetically Fixed C ......................................................... 279
15.5.2 Root Growth .................................................. 280
15.5.3 Exudation, Mucilage, and Cell Death ......................... 280
15.5.4 Root Death and Turnover ................................... 281
15.5.5 Elevated CO$_2$ and FACE Experiments ...................... 281
15.6 Respiration ....................................................... 282
15.6.1 Direct and Indirect Effects of CO$_2$ .......................... 282
15.6.2 Above-Ground Respiration and FACE ....................... 284
15.6.3 Roots in Soil .................................................. 284
15.6.4 Below-Ground Respiration and FACE ....................... 285
15.7 Conclusion ....................................................... 286
References .......................................................... 287

16 The Response of Foliar Carbohydrates to Elevated [CO$_2$] .... 293

A. Rogers and E.A. Ainsworth

16.1 Introduction .................................................... 293
16.1.1 Why is it Important to Understand the Response of Foliar Carbohydrates to Growth at e[CO$_2$]? ........................ 293
16.1.2 What Were the Known Effects of e[CO$_2$] on Foliar Carbohydrates Before FACE? .......................... 294
16.2 Do Carbohydrates Accumulate in the Leaves of Plants Grown in the Field Using FACE Technology? .................. 295
16.3 Manipulations of Source–Sink Balance ......................... 298
16.4 The Effect of Nitrogen Supply on Sink Capacity ................ 301
16.5 What Are the Signs of a Limited Sink Capacity? .............. 303
16.6 Conclusion ....................................................... 305
References .......................................................... 305

17 Evapotranspiration, Canopy Temperature, and Plant Water Relations ............................................. 311

B.A. Kimball and C.J. Bernacchi

17.1 Introduction .................................................... 311
17.2 Canopy Temperature ............................................ 311
17.3 Evapotranspiration .............................................. 314
17.3.1 Changes in ET with e[CO$_2$] ................................ 314
17.3.2 Correlations of ET with Canopy Temperature and Shoot Biomass Changes ........................................... 315
17.3.3 Applicability of Plot-Scale ET Measurements to Regional Scales .................................................. 317
17.3.4 Combined Physiological and Global-Warming Effects of e[CO$_2$] on ET ........................................... 318
