## Contents

<b>1</b>	<b>Introduction</b> .....	1
<b>2</b>	<b>Homogenous Transformations</b> .....	5
2.1	Transformation of Coordinates and Homogenous Transformations .....	5
2.2	Velocity and Acceleration of a Rigid Body .....	15
2.3	Description of Geometry of Rigid Links .....	17
2.4	Kinetic Energy and Lagrange Operators .....	19
2.5	Potential Energy of Gravity Forces .....	25
2.6	Generalised Forces and Equations of Motion .....	26
2.7	Generalisation of the Procedure .....	27
<b>3</b>	<b>The Rigid Finite Element Method</b> .....	35
3.1	Division of the Flexible Link into Rigid Finite Elements and Spring-Damping Elements .....	37
3.2	Kinetic Energy of the Flexible Link .....	45
3.3	Energy of Deformation and Dissipation of Energy of Link $p$ ...	53
3.4	Synthesis of Equations .....	58
3.5	Linear Model .....	61
3.6	Parameters of Rigid Finite Elements and Spring-Damping Elements .....	69
<b>4</b>	<b>Modification of the Rigid Finite Element Method</b> .....	83
4.1	Generalised Coordinates and Transformation Matrices .....	83
4.2	Kinetic Energy of the Flexible Link and Its Derivatives .....	86
4.3	Potential Energy of the Flexible Link .....	90
4.4	Synthesis of Equations .....	92
4.5	Linear Model .....	94
<b>5</b>	<b>Calculations for a Cantilever Beam and Methods of Integrating the Equations of Motion</b> .....	103
5.1	Equations of the Free Vibrations of a Beam .....	103
5.1.1	Classical Rigid Finite Element Method	
	Nonlinear Model .....	104

5.1.2	Classical Rigid Finite Element Method Linear Model .....	111
5.1.3	Modified Rigid Finite Element Method Nonlinear Model .....	113
5.1.4	Modified Rigid Finite Element Method Linear Model .....	116
5.2	Integrating the Equations of Motion .....	119
5.2.1	Newmark Method .....	123
5.2.2	Euler and Runge–Kutta Methods .....	123
5.2.3	Step-Size Control .....	125
5.2.4	Stiff Systems of Differential Equations .....	131
5.3	Numerical Effectiveness of Models and Methods of Integrating the Equations of Motion .....	135
<b>6</b>	<b>Verification of the Method .....</b>	<b>141</b>
6.1	Vibrations of Whippy Beams .....	141
6.1.1	Frequencies of Free Vibrations for a Uniform Beam ....	143
6.1.2	Linear and Non-linear Vibrations of a Viscoelastic Beam .....	145
6.1.3	Kane’s Manipulator .....	153
6.1.4	Analysis of Large Deflections .....	163
6.2	Experimental Verification of the Method .....	166
6.2.1	Large Amplitude Vibrations of a Fixed Whippy Beam .....	167
6.2.2	Sandia Manipulator .....	173
<b>7</b>	<b>Applications .....</b>	<b>183</b>
7.1	Offshore Crane .....	183
7.1.1	Discretisation of Flexible Links and the Equations of Motion .....	183
7.1.2	Numerical Calculations .....	188
7.2	Telescopic Rapier .....	192
7.2.1	Discretisation of the Internal Rapier and the Equations of Motion .....	194
7.2.2	Numerical Calculations .....	197
7.3	A-Frame .....	198
7.3.1	Classical Rigid Finite Element Method Linear Model .....	205
7.3.2	Modified Rigid Finite Element Method Linear Model .....	211
7.3.3	Description of Programmes and Results of Calculations .....	212
7.4	Further Applications .....	216
	<b>References .....</b>	<b>219</b>
	<b>Index .....</b>	<b>223</b>

Dynamics of Flexible Multibody Systems

Rigid Finite Element Method

Wittbrodt, E.; Adamiec-Wójcik, I.; Wojciech, S.

2006, VI, 227 p., Hardcover

ISBN: 978-3-540-32351-8
