# Table of Contents

**Alois Alzheimer**

Concerning a unique disease of the cerebral cortex  
*Alois Alzheimer* .......................................................... 3

The history of Alois Alzheimer’s first case Auguste D.  
*Maurer Konrad* ............................................................. 13

Alois Alzheimer and the beginnings of research into Alzheimer’s disease  
*Ralf Dahm* ................................................................. 37

Alois Alzheimer and the myth of the pioneer  
*Yves Christen* ............................................................... 51

**The beginning of modern research**

Alzheimer’s Disease at mid-Century (1927–1977) and a little more  
*Robert D. Terry* ............................................................ 59

A chapter in the development on Alzheimer’s disease research  
*Zaven S. Khachaturian* ..................................................... 63

**Anatomy & Neuropsychology**

Anatomical changes underlying dementia in Alzheimer’s disease  
*Bradley T. Hyman* .......................................................... 89

Staging of cortical neurofibrillary inclusions of the Alzheimer’s type  
*Heiko Braak, Kelly Del Tredici* ............................................ 97

Of stains and brains: a brief account of how microscopic and clinical observations contributed to the understanding of Alzheimer’s disease  
*Charles Duyckaerts, Jean-Jacques Hauw* ................................. 109

Presenile forms of Alzheimer’s disease in 2006  
*Michel Poncet, Olivier Felician, Jean-François Pellissier* ............................. 115
Cholinergic Deficit

The cholinergic deficit in Alzheimer’s disease
Peter Davies .......................................................... 123

Acetylcholine in AD: Expectations meet reality
John H. Growdon .................................................. 127

Amyloid and Genetics

The Discovery of β Amyloid
Cai’ne W. Wong...................................................... 135

Pathways to the discovery of the neuronal origin and proteolytic biogenesis of Aβ amyloid of Alzheimer’s disease
Colin L Masters, Konrad Beyreuther ........................... 143

The Amyloid Hypothesis: history and alternatives
John Hardy .......................................................... 151

Segregation of a missense mutation in the amyloid β-protein precursor gene with familial Alzheimer’s disease
Alison Goate .......................................................... 157

From the amyloid β protein (A4) to isolation of the first Alzheimer’s disease gene: amyloid β (A4) precursor protein (APP)
Rudolph E. Tanzi ...................................................... 163

Commentary on “Correlative memory deficits, Aβ elevation, and amyloid plaques in transgenic mice”
Karen Hsiao Ashe ...................................................... 171

Vision for the future. Alzheimer’s disease: pathogenesis, models and experimental therapeutics
Donald L. Price, Tong Li, Fiona M. Laird, Mohamed Farah, Alena V. Savonenko, Michael Lee, Juan Troncoso, Philip C. Wong .......................... 175

PS1, PS2, and APP mutations that cause Alzheimer’s disease increase Aβ42
Steven G. Younkin ...................................................... 189

Amyloid precursor protein, Alzheimer’s disease, and Down’s syndrome
Edward H. Koo ...................................................... 197

Catabolism of amyloid β peptide and pathogenesis of sporadic Alzheimer’s disease: towards understanding the underlying mechanisms
Takaomi C. Saido ...................................................... 201

Apolipoprotein E4: From synaptic remodeling to genetic risk factor in both familial and sporadic Alzheimer’s disease  
*Judes Poirier* ................................................................. 289

**Tau**

The Alzheimer tangle – 100 years on.  
*Michel Goedert, Maria Grazia Spillantini, Bernardino Ghetti, R. Anthony Crowther, Aaron Klug* ............................................... 297

Immunological demonstration of tau protein in neurofibrillary tangles  
*Jean-Pierre Brion* ................................................................. 307

Bulk isolation of neurofibrillary tangles and discoveries of tau and its abnormal hyperphosphorylation  
*Khalid Iqbal, Inge Grundke-Iqbal* ........................................... 315

The natural and molecular history of Alzheimer’s disease:  
Tau is part of the story  
*André Delacourte* ................................................................. 325

Tau focused drug discovery for Alzheimer’s disease and related Neurodegenerative Tauopathies  
*Virginia M.-Y. Lee, John Q. Trojanowski* .................................. 333

Ubiquitin is a component of paired helical filaments in Alzheimer’s disease  
*Yasuo Ihara* ........................................................................ 339

Influence of tau on neuronal traffic mechanisms  
*E.-M. Mandelkow, E. Thies, J. Biernat, E. Mandelkow* ..................... 345

The Search for structure of tau and paired helical filaments  
*E. Mandelkow, M. von Bergen, A. Marx, J. Biernat, E.-M. Mandelkow* ........... 355

**Oxidative Stress**

The Changing landscape of Alzheimer’s disease:  
From Insoluble to Soluble and from Pathogen to Protector  
*Mark A. Smith, George Perry* .................................................. 367

Molecular and cellular pathways towards and away from Alzheimer’s disease  
*Mark P. Mattson* .................................................................. 371

**Epidemiology**

Paquid: an integrated, multidisciplinary, population-based approach to normal and pathological cerebral aging  
*Jean François Dartigues* .......................................................... 379
Imaging

Hippocampal imaging in the early diagnosis of AD, 1988 to 2006
Mony J. de Leon ................................................................. 385

Detecting Early-Stage Alzheimer’s Disease in MCI and PreMCI:
The value of informants
John C. Morris, Martha Storandt ........................................ 393

Imaging the pathology of Alzheimer’s disease:
Building on a century-Old blueprint
William E. Klunk, Chester A. Mathis .............................. 399

Therapeutical Perspectives

How do we test drugs?
Leon J. Thal ................................................................. 407

Inflammation and the lesions of Alzheimer’s disease
Edith G. McGeer, Patrick L. McGeer ................................ 413

Aβ immunotherapy prevents and Reverses Alzheimer’s disease neuropathology
Dale Schenk, Dora Games, Peter Seubert ............................ 419

Immunotherapy of Alzheimer’s disease
Roger M. Nitsch, Christoph Hock ...................................... 425

“Magic” bullets, shotguns or cocktails to treat or prevent Alzheimer’s disease?
Todd E. Golde ................................................................. 431

The seventh age of man: Solving senility
Dennis J. Selkoe ................................................................. 435

Forum and Network

Fondation Ipsen and Alzheimer’s disease: a 20-year relationship
Jacqueline Mervaillie .......................................................... 443

Alzheimer Research Forum:
A Knowledge Base and e-Community for AD Research
June Kinoshita, Gabrielle Strobel ...................................... 457

The Potamkin prize for research in Pick’s, Alzheimer’s and related diseases ........ 465
