The Function of Systems Concepts –
From Systems Theory to Systems Science
Eberhard Umbach ........................................ 51
1 Formulation of the Problem ......................... 51
2 Historical Aspects .................................. 52
3 Priorities of Systems Concepts with Different Authors .... 55
4 Criticism of Systems Concepts .................... 56
4.1 Some Critical Authors ............................. 56
4.1.1 Ida Hoos (1972) ............................... 56
4.1.2 Robert Lilienfeld (1978) ...................... 57
4.1.3 Czayka (1974) ................................ 59
4.1.4 Kappel and Schwarz (1981) ................... 60
4.1.5 Klaus Mueller 1996 ........................... 61
4.2 Summary of the Aspects of Criticism ............... 65
5 Evaluation of Criticisms ............................. 67
6 Conclusions for Systems Science .................... 69
References and Further Reading ....................... 70

Fuzzy Aspects of Systems Science
William Silvert ........................................ 73
1 Introduction ..................
### Parameter Estimation in Nonlinear Systems with Dynamic Noise

_Nico Stollenwerk_ .............................. 95

1. Introduction .................................. 95
2. Epidemic Models .............................. 96
3. SI-Model with Demographic Stochasticity .......... 96
4. Analytic Solution for the SI Case ................ 97
5. Empirical Likelihood .......................... 99
6. A First More Complex Test Case ................ 100
7. Summary and Prospects ........................ 100
8. References .................................... 101

### Spatial Pattern Formation in a Simple Model of Consumer-Resource System

_Alexander Bobyrev, Eugeny Kriksunov, Vladimir Burmensky, Horst Malchow_ ............ 103

1. Introduction .................................. 103
2. The Model .................................... 105
2.1 Resource .................................... 105
2.2 Consumers ................................... 105
2.3 Turbulent Mixing ............................. 106
3. Results ....................................... 106
3.1 General Aspects of the Model Behavior .......... 106
3.2 Influence of the Parameters .................... 107
4. Discussion .................................... 108
5. References ..................................... 109

### Scaling Laws for the Prey-Predator Interaction Rates

_Zhen-Shan Lin, Bai-Lian Li_ ................. 111

1. Introduction .................................. 111
2. Basic Physical Model for Predating Processes . . . 112
3. Scaling Relations from Hydrodynamic Theory . . 113
4. Scaling Relations from Kinematics and Biomechanics 114
5. Scaling Relations from Kinetic Energy Consideration 115
6. Conclusion ..................................... 117
7. References ..................................... 117

### Active Motion in Systems with Energy Supply

_Werner Ebeling, Frank Schweitzer_ ........... 119

1. Introduction .................................. 119
2. Model of Driven Brownian Dynamics .............. 121
2.1 Equations of Motion and Energy Balance ....... 121
2.2 Non-Linear Friction Functions and Free Motion 123
2.3 Stationary Solutions for the Distribution Function 125
3. One-Dimensional Driven Dynamics Including Forces 127
3.1 Motion in Linear and Ratchet-Like Potentials .... 127
Contents

1 Introduction ............................................. 181
1.1 Requirements of Environmental Modeling .................... 181
1.2 Concepts of Hybrid Model Development ....................... 182
1.3 Aim and Scope of the Development .......................... 182
2 Methodological Framework .................................. 183
2.1 Hybrid Low Level Petri Nets ............................... 183
2.1.1 Structure and Topology ................................ 183
2.2 Functional Behavior ...................................... 185
2.2.1 Switching Conditions ................................... 185
2.2.2 Stochastic Time Weighting and Ordinary Differential
Equation Systems ............................................. 185
2.3 Development Platform ..................................... 186
2.3.1 Functionalities ......................................... 186
2.3.2 Simulation ............................................. 187
3 Case Study 1: Generic Modeling of Crop Growth ................. 188
3.1 Modeling of Crop Development .............................. 188
3.2 Petri Net .............................................. 191
3.2.1 Structure and Topology ................................ 191
3.2.2 Sub-Net: Physiological Stage Model ...................... 191
3.2.3 Sub-Net: Crop Growth .................................. 192
3.3 Results ............................................... 192
4 Case Study 2: Meta-Population in Island Biography ............. 194
4.1 Meta-Population in Island Biogeography ....................... 194
4.1.1 Insular Zoogeography ................................... 194
4.1.2 Reproduction ......................................... 194
4.1.3 The Galápagos Archipelago and the Blue-Winged Grasshopper 195
4.1.4 Overlay of Map and Petri Net ............................ 195
4.2 Results ............................................... 196
5 Discussion .............................................. 199
5.1 Concluding Remarks ...................................... 199
5.2 Outlook .............................................. 199
References ............................................... 200

An Empirically Based Approach to Self-Organization in
Forest Ecosystems
Martin Jenssen ............................................ 203
1 Introduction ............................................. 203
2 The Understanding of Forests as Self-Organizing Ecosystems
in Historical Development ................................ 204
### Contents

3 The Forest Ecosystem Types as Statistical Ensembles  
Corresponding to the Attractors of Natural and Artificial Forests  
\[ \text{Corresponding to the Attractors of Natural and Artificial Forests} \]
