Table of Contents

Invited Papers

Graphical Models as Languages for Computer Assisted Diagnosis and Decision Making .................................. 1
  Finn Verner Jensen

Planning with Uncertainty and Incomplete Information ............. 16
  Hector Geffner

What’s Your Preference? And How to Express and Implement It in Logic Programming! ................................ 17
  Torsten Schaub

Contributed Papers

Decision Theory

On Preference Representation on an Ordinal Scale ...................... 18
  Michel Grabisch

Rule-Based Decision Support in Multicriteria Choice and Ranking .... 29
  Salvatore Greco, Benedetto Matarazzo, Roman Slowinski

Propositional Distances and Preference Representation ................ 48
  Céline Lafage, Jérôme Lang

Partially Observable Markov Decision Processes

Value Iteration over Belief Subspace ................................. 60
  Weihong Zhang

Space-Progressive Value Iteration: An Anytime Algorithm for a Class of POMDPs ........................................ 72
  Nevin L. Zhang, Weihong Zhang

Decision-Making

Reasoning about Intentions in Uncertain Domains ...................... 84
  Martijn Schut, Michael Wooldridge, Simon Parsons

Troubleshooting with Simultaneous Models ............................ 96
  Jiří Vomlel, Claus Skaanning

A Rational Conditional Utility Model in a Coherent Framework ........ 108
  Silvia Bernardi, Giulianella Coletti
# Table of Contents

## Coherent Probabilities

Probabilistic Reasoning as a General Unifying Tool .......................... 120  
*Giulianella Coletti, Romano Scozzafava, Barbara Vantaggi*

An Operational View of Coherent Conditional Previsions .................. 132  
*Andrea Capotorti, Tania Paneni*

## Bayesian Networks

Decomposition of Influence Diagrams ........................................... 144  
*Thomas D. Nielsen*

Mixtures of Truncated Exponentials in Hybrid Bayesian Networks .......... 156  
*Serafín Moral, Rafael Rumí, Antonio Salmerón*

Importance Sampling in Bayesian Networks Using Antithetic Variables ... 168  
*Antonio Salmerón, Serafín Moral*

Using Recursive Decomposition to Construct Elimination Orders, Join  
Trees, and Dtrees ............................................................ 180  
*Adnan Darwiche, Mark Hopkins*

Caveats for Causal Reasoning with Equilibrium Models ..................... 192  
*Denver Dash, Marek J. Druzdzel*

## Learning Causal Networks

Supporting Changes in Structure in Causal Model Construction ............ 204  
*Tsai-Ching Lu, Marek J. Druzdzel*

The Search of Causal Orderings: A Short Cut for Learning  
Belief Networks ............................................................... 216  
*Silvia Acid, Luis M. de Campos, Juan F. Huete*

Stochastic Local Algorithms for Learning Belief Networks: Searching in  
the Space of the Orderings .................................................. 228  
*Luis M. de Campos, J. Miguel Puerta*

An Empirical Investigation of the K2 Metric .................................. 240  
*Christian Borgelt, Rudolf Kruse*

## Graphical Representations of Uncertainty

Sequential Valuation Networks: A New Graphical Technique  
for Asymmetric Decision Problems ........................................... 252  
*Riza Demirer, Prakash P. Shenoy*

A Two-Steps Algorithm for Min-Based Possibilistic Causal Networks ..... 266  
*Nahla Ben Amor, Salem Benferhat, Khaled Mellouli*
Imprecise Probabilities

Computing Intervals of Probabilities with Simulated Annealing and Probability Trees .............................................................. 278  
   Andrés Cano, Serafn Moral

Probabilistic Logic under Coherence, Model-Theoretic Probabilistic Logic, and Default Reasoning ........................................ 290  
   Veronica Biazzo, Angelo Gilio, Thomas Lukasiewicz, Giuseppe Sanfilippo

Belief Functions

Belief Functions with Partially Ordered Values ....................... 303  
   Ivan Kramosil

Dempster Specialization Matrices and the Combination of Belief Functions ................................................................. 316  
   Paul-André Monney

On the Conceptual Status of Belief Functions with Respect to Coherent Lower Probabilities ............................................. 328  
   Pietro Baroni, Paolo Vicig

About Conditional Belief Function Independence .................. 340  
   Boutheina Ben Yaghlane, Philippe Smets, Khaled Mellouli

The Evaluation of Sensors’ Reliability and Their Tuning for Multisensor Data Fusion within the Transferable Belief Model .......... 350  
   Zied Elouedi, Khaled Mellouli, Philippe Smets

Coarsening Approximations of Belief Functions ..................... 362  
   Amel Ben Yaghlane, Thierry Denœux, Khaled Mellouli

Fuzzy Sets and Rough Sets

Label Semantics: A Formal Framework for Modeling with Words ........ 374  
   Jonathan Lawry

Reasoning about Knowledge Using Rough Sets .......................... 385  
   Weiru Liu

Possibility Theory

The Capacity of a Possibilistic Channel .................................. 398  
   Andrea Sgarro

New Semantics for Quantitative Possibility Theory .................. 410  
   Didier Dubois, Henri Prade, Philippe Smets
Bridging Logical, Comparative, and Graphical Possibilistic Representation frameworks
Salem Benferhat, Didier Dubois, Souhila Kaci, Henri Prade

Applications

Ellipse Fitting with Uncertainty and Fuzzy Decision Stage for Detection.
Application in Videomicroscopy
Franck Dufrenois

Probabilistic Modelling for Software Quality Control
Norman Fenton, Paul Krause, Martin Neil

Spatial Information Revision: A Comparison between 3 Approaches
Éric Würbel, Robert Jeansoulin, Odile Papini

Merging

Social Choice, Merging, and Elections
Thomas Meyer, Aditya Ghose, Samir Chopra

Data Merging: Theory of Evidence vs. Knowledge-Bases
Merging Operators
Laurence Cholvy

Belief Revision and Preferences

A Priori Revision
Florence Dupin de Saint-Cyr, Béatrice Duval, Stéphane Loiseau

Some Operators for Iterated Revision
Sébastien Konieczny, Ramón Pino Pérez

On Computing Solutions to Belief Change Scenarios
James P. Delgrande, Torsten Schaub, Hans Tompits, Stefan Woltran

‘Not Impossible’ vs. ‘Guaranteed Possible’ in Fusion and Revision
Didier Dubois, Henri Prade, Philippe Smets

General Preferential Entailments as Circumscriptions
Yves Moinard

Inconsistency Handling

A Semantic Tableau Version of First-Order Quasi-Classical Logic
Anthony Hunter

On Anytime Coherence-Based Reasoning
Frédéric Koriche
Resolving Conflicts between Beliefs, Obligations, Intentions, and Desires . . 568

Jan Broersen, Mehdi Dastani, Leendert van der Torre

Default Logic

Comparing a Pair-Wise Compatibility Heuristic and
Relaxed Stratification: Some Preliminary Results ....................... 580

Robert E. Mercer, Lionel Forget, Vincent Risch

How to Reason Credulously and Skeptically within a Single Extension . . . 592

James P. Delgrande, Torsten Schaub

Conditional Default Reasoning

Handling Conditionals Adequately in Uncertain Reasoning ............. 604

Gabriele Kern-Isberner

Rankings We Prefer - A Minimal Construction Semantics for
Default Reasoning .......................................................... 616

Emil Weydert

Models of Uncertainty from the Psychology Viewpoint

Formalizing Human Uncertain Reasoning with Default Rules:
A Psychological Comundrum and a Pragmatic Suggestion .............. 628

Jean-François Bonnefon, Denis J. Hilton

Statistical Information, Uncertainty, and Bayes’ Theorem:
Some Applications in Experimental Psychology ................. 635

Donald Laming

Polymorphism of Human Judgment under Uncertainty ............. 647

Rui Da Silva Neves, Eric Raufaste

How to Doubt about a Conditional .................................... 659

Guy Politzer

Argumentation Systems and ATMSs

Dialectical Proof Theories for the Credulous Preferred Semantics
of Argumentation Frameworks ................................................ 668

Claudette Cayrol, Sylvie Doutre, Jérôme Mengin

Argumentation and Qualitative Probabilistic Reasoning Using the Kappa
Calculus ................................................................. 680

Valentina Tamma, Simon Parsons
## Causality, Events, Explanations

Importance Measures from Reliability Theory for Probabilistic Assumption-Based Reasoning .......................................................... 692
   Bernhard Anrig

Ramification in the Normative Method of Causality .......................... 704
   Mahat Khelfallah, Aicha Mokhtari

Simultaneous Events: Conflicts and Preferences ............................. 714
   John Bell

Orthogonal Relations for Reasoning about Abstract Events ............... 726
   Ajay Kshemkalyani, Roshan Kamath

## Logic Programming

Explanatory Relations Based on Mathematical Morphology .............. 736
   Isabelle Bloch, Ramón Pino-Pérez, Carlos Uzcátegui

Monotonic and Residuated Logic Programs .................................... 748
   Carlos Viegas Damásio, Luís Moniz Pereira

## Modal Logics for Information Systems

A Proof Procedure for Possibilistic Logic Programming
with Fuzzy Constants ................................................................. 760
   Teresa Alsinet, Lluis Godo

First-Order Characterization and Modal Analysis of Indiscernibility and Complementarity in Information Systems ............................ 772
   Philippe Balbiani, Dimiter Vakarelov

## Satisfiability

Complete and Incomplete Knowledge in Logical Information Systems ...... 782
   Sébastien Ferré

Extending Polynomiality to a Class of Non-clausal Many-Valued Horn-Like Formulas ................................................................. 792
   E. Altamirano, G. Escalada-Imaz

A Genetic Algorithm for Satisfiability Problem in a Probabilistic Logic:
A First Report ................................................................. 805
   Zoran Ognjanović, Jozef Kratica, Miloš Milovanović

## Author Index

 ................................................................. 817
Symbolic and Quantitative Approaches to Reasoning with Uncertainty
Benferhat, S.; Besnard, P. (Eds.)
2001, XIV, 818 p., Softcover
ISBN: 978-3-540-42464-2
