Contents

Preface vii

1 Introduction 1
  1.1 Scope of this Monograph 2
  1.2 Useful Background for this Presentation 3
  1.3 Overview 4

2 Finite Element Formulations in Nonlinear Solid Mechanics 7
  2.1 Initial/Boundary Value Problems in the Kinematically Linear Regime 8
     2.1.1 Strong Form of the IBVP 9
     2.1.2 Weak Form of the IBVP 15
  2.2 The IBVP in the Finite Strain Case 17
     2.2.1 Notation and Problem Formulation 17
     2.2.2 Finite Strain Kinematics 18
     2.2.3 Stress Definitions Appropriate for Large Deformations 24
     2.2.4 Frame Indifference 27
     2.2.5 The Strong Form in Finite Strains 31
     2.2.6 The Weak Form in Finite Strains 39
  2.3 Finite Element Discretization 41
     2.3.1 Discretized Weak Form; Generation of Discrete Nonlinear Equations 43
     2.3.2 Discrete Nonlinear Equations for the Kinematically Linear Case 46
2.4 Solution Strategies for Spatially Discrete Systems .......... 48
  2.4.1 Quasistatics and Incremental Load Methods .......... 48
  2.4.2 Dynamics and Global Time Stepping Procedures .......... 50
  2.4.3 Local ( Constitutive) Time Stepping Procedures .......... 54
  2.4.4 Nonlinear Equation Solving .......................... 56
  2.4.5 Consistent Algorithmic Linearization of Material Response .................................................. 61

3 The Kinematically Linear Contact Problem ........................ 69
  3.1 Strong Forms in Linearized Frictionless Contact .............. 70
    3.1.1 The Signorini Problem: Contact with a Rigid Obstacle .......... 70
    3.1.2 The Two Body Contact Problem .......................... 75
  3.2 Weak Statements of the Contact Problem ...................... 79
    3.2.1 Variational Inequalities .............................. 81
    3.2.2 The Quasistatic Elastic Case: Contact as a Problem of Constrained Optimization ................. 83
  3.3 Methods of Constraint Enforcement .......................... 85
    3.3.1 Classical Lagrange Multiplier Methods ................ 85
    3.3.2 Penalty Methods ..................................... 89
    3.3.3 Augmented Lagrangian Methods ......................... 91
  3.4 Inclusion of Friction into the Problem Description ............ 94
    3.4.1 Friction Kinematics and Traction Measures ............. 94
    3.4.2 Unregularized Coulomb Friction Laws .................. 96
    3.4.3 Regularization of Friction ............................ 98
    3.4.4 Variational Statements Including Friction ............. 101
    3.4.5 Nonlocal Frictional Descriptions ..................... 106

4 Continuum Mechanics of Large Deformation Contact .............. 109
  4.1 Two Body Contact Problem Definition ........................ 110
    4.1.1 Local Momentum Balances .............................. 111
    4.1.2 Initial and Boundary Conditions ...................... 112
  4.2 Contact Constraints in Large Deformations ................... 113
    4.2.1 The Gap Function as Defined by Closest Point Projection .......... 113
    4.2.2 Frictional Kinematics on Interfaces .................. 116
    4.2.3 Frame Indifference of Contact Rate Variables .......... 121
    4.2.4 Coulomb Friction in Large Sliding .................... 129
  4.3 Summary: Strong Form of the Large Deformation Contact Problem .................................................. 134
  4.4 Virtual Work Expressions Incorporating Contact ............... 137
    4.4.1 Contact Virtual Work: The Contact Integral ............. 139
    4.4.2 Linearization of Contact Virtual Work ................ 141
    4.4.3 Summary: Weak Form of the Large Deformation Contact Problem .................................................. 144
5 Finite Element Implementation of Contact Interaction 145
  5.1 Finite Dimensional Representation of Contact Interaction 147
     5.1.1 Contact Surface Discretization 147
     5.1.2 Numerical Integration of the Contact Integral 148
     5.1.3 Contact Detection (Searching) 152
  5.2 Time Discretization 158
     5.2.1 Global time integration schemes 158
     5.2.2 Temporally Discrete Frictional Laws for the Penalty Regularized Case 159
  5.3 Contact Stiffness and Residual: Penalty Regularized Case 162
     5.3.1 Three dimensional matrix expressions 162
     5.3.2 Two dimensional matrix expressions 166
  5.4 Augmented Lagrangian Constraint Enforcement Algorithms 169
     5.4.1 Uzawa's Method (Method of Multipliers) 170
     5.4.2 Algorithmic Symmetrization Using Augmented Lagrangians 174
     5.4.3 Augmented Lagrangian Discrete Force and Stiffness Expressions 178
  5.5 Numerical Examples 180
     5.5.1 General Demonstrations of the Computational Framework 180
     5.5.2 Demonstrations of Augmented Lagrangian Algorithmic Performance 196

6 Tribological Complexity in Interface Constitutive Models 211
  6.1 Rate and State Dependent Friction 212
     6.1.1 Motivation 213
     6.1.2 One Dimensional Model Development 215
     6.1.3 Model Incorporation into Convective Slip Advected Frame 220
     6.1.4 Local Time Stepping Algorithm 222
     6.1.5 Contact Force Vector and Stiffness Matrix 226
     6.1.6 Numerical Examples 227
  6.2 Thermomechanically Coupled Friction on Interfaces 238
     6.2.1 Motivation 239
     6.2.2 Thermally Coupled Problem Definition 241
     6.2.3 A Thermodynamically Consistent Friction Model 244
     6.2.4 Variational Principle and Finite Element Implementation 255
     6.2.5 Numerical Examples 269
  6.3 Thermodynamical Algorithmic Consistency 279
     6.3.1 Constitutive Framework for Bulk Continua 280
     6.3.2 Thermomechanical Interface Model Framework 283
     6.3.3 A Priori Stability Estimates for Dynamic Frictional Contact 286
