1. Why Manganites Are Interesting ................................................. 1
   1.1 A Dominant Theme of Current Times: Strongly Correlated Electrons ................................................. 1
   1.2 The Growing Interest in Manganite Research ...................... 2
   1.3 Nanoscale Phase Separation ............................................ 4
   1.4 Complexity in Materials ................................................. 5
   1.5 Computational Techniques in Complex Systems ...................... 5
   1.6 Other Books and Reviews ................................................ 7
   1.7 The Evolution of Condensed Matter Physics  
       by J.R. Schrieffer ..................................................... 7

2. The Discovery of Manganites  
   and the Colossal Magnetoresistance Effect ............................ 9
   2.1 The Early Days of Manganites ......................................... 9
   2.2 The Colossal MR Effect ................................................ 13
   2.3 Early Theoretical Studies ............................................ 15
   2.4 Tolerance Factor ....................................................... 19
   2.5 High Magnetic Fields .................................................. 20

3. Phase Diagrams and Basic Properties of Manganites .................. 23
   3.1 The Intermediate Bandwidth Compound La_{1-x}Ca_xMnO_3 ............ 23
   3.2 Basic Properties of Pr_{1-x}Ca_xMnO_3 ................................ 30
   3.3 Basic Properties of La_{1-x}Sr_xMnO_3 ................................ 35
   3.4 Half-Metallic Ferromagnets .......................................... 38
   3.5 Basic Properties of Nd_{1-x}Sr_xMnO_3 and Pr_{1-x}Sr_xMnO_3 ...... 41
   3.6 Summary of Results for Perovskites ................................ 42
   3.7 Basic Properties of Bilayer Manganites ............................... 42
   3.8 Basic Properties of Single-Layer Manganites ...................... 48

4. Preliminary Theoretical Considerations:  
   Coulombic and Jahn Teller Effects ....................................... 51
   4.1 Basic Multi Orbital Model and On Site Coulomb Interactions ...... 51
   4.2 Crystal Field Splitting and Jahn Teller Effect ..................... 57
       4.2.1 Perturbing Potential due to the Crystal ...................... 57
       4.2.2 The Jahn Teller Effect ......................................... 63
5. Models for Manganites ........................................... 71
   5.1 Coulombic Terms ........................................... 71
   5.2 Heisenberg Term ........................................... 72
   5.3 The Electron–Phonon Interaction ......................... 73
   5.4 A Simple but Realistic Model for Manganites .......... 74
   5.5 The One-Orbital Model ................................... 75
   5.6 The Limit of $J_H = \infty$ ............................... 76
   5.7 The Relevance of Jahn–Teller Phonons .................. 77
   5.8 The Two-Orbital Model ................................... 78
   5.9 Hopping Amplitudes ...................................... 79
   5.10 Noninteracting $e_g$–electron Model .................... 81
   5.11 Estimation of Couplings ................................ 83

6. The One-Orbital Model:
   Phase Diagram and Dominant Correlations .................. 87
   6.1 Phase Diagram at $J_{AF} = 0.0$ ........................ 87
   6.2 Ferromagnetism ........................................... 88
      6.2.1 Critical Temperature of the 3D One-Orbital Model
             in the Ferromagnetic Regime ....................... 93
   6.3 Antiferromagnetism at Electronic Density $\langle n \rangle = 1.0$ .. 95
   6.4 Phase Separation ....................................... 96
      6.4.1 Compressibility and Phase Separation ............ 100
      6.4.2 High Compressibility near Phase Separation ...... 102
   6.5 Spin Incommensurability ................................ 103
   6.6 Phase Diagram using Quantum $S = 3/2$ Spins .......... 105
   6.7 Influence of Long-Ranged Coulomb Repulsion
             on Phase Separation ................................ 109
   6.8 Phase Diagram Including the $J_{AF}$ Coupling ........ 111
      6.8.1 Exotic Phases Induced by $J_{AF}$ ................ 112
   6.9 The Spin–Fermion Model for Cuprates
      by A. Moreo ........................................... 117
   6.10 Appendix I: The Effective Hopping $t \cos \frac{\theta}{2}$ .... 119
   6.11 Appendix II: Brief Introduction to the Kondo Effect .. 122

7. Monte Carlo Simulations and Application
   to Manganite Models .......................................... 125
   with G. Alvarez and A. Feiguin ............................ 125
   7.1 Numerical Integration ................................... 125
      7.1.1 Simple Sampling .................................. 126
      7.1.2 Importance Sampling .............................. 126
   7.2 Monte Carlo Simulations ................................ 127
      7.2.1 Importance Sampling of Physical Quantities .... 127
      7.2.2 Markov Processes .................................. 128
      7.2.3 Sampling Techniques .............................. 129
   7.3 The Ising Model ......................................... 130

11. Inhomogeneities in Manganites:
   The Case of La$_{1-x}$Ca$_x$MnO$_3$ ........................................... 213
   11.1 Inhomogeneities in La$_{1-x}$Ca$_x$MnO$_3$ .......................... 214
      11.1.1 Brief Introduction to Neutron Scattering
            by J. A. Fernandez-Baca ........................................... 214
      11.1.2 Neutron Scattering in La$_{1-x}$Ca$_x$MnO$_3$ ................. 222
      11.1.3 Anomalous Softening of Zone-Boundary Magnons .............. 225
      11.1.4 Volume Thermal Expansion ..................................... 228
      11.1.5 Electron Microscopy ........................................... 230
      11.1.6 Brief Introduction to STM ..................................... 232
      11.1.7 Scanning Tunneling Spectroscopy in La$_{1-x}$Ca$_x$MnO$_3$ .......................... 233
      11.1.8 PDF, X-Ray, and Small-Angle Neutron Scattering Experiments .......... 235
      11.1.9 Brief Introduction to Nuclear Magnetic Resonance .......... 237
      11.1.10 Nuclear Magnetic Resonance in La$_{1-x}$Ca$_x$MnO$_3$ ........ 239
      11.1.11 The NMR “Wipeout” Effect
            by G. Papavassiliou ............................................... 241
      11.1.12 Influence of Cr Doping on Charge-Ordered Manganites .......... 243
      11.1.13 Giant Noise in Manganites .................................... 245
      11.1.14 Other Results Related with Phase Separation .............. 247
   11.2 Inhomogeneities in Electron-Doped Manganites .................. 248
   11.3 Probing of Phase-segregated Systems with Low-Temperature
      Heat-Capacity Measurements
            by J.J. Neumeier and A.L. Cornelius ............................. 251

12. Optical Conductivity .................................................... 255
   12.1 $\sigma(\omega)$: Experimental Results in Manganites ........... 255
   12.2 $\sigma(\omega)$: Theoretical Results ................................. 262
   12.3 Brief Introduction to Experimental Aspects
      of Optical Spectroscopy
            by T.W. Noh ...................................................... 267

13. Glassy Behavior and Time-Dependent Phenomena .................. 273
   13.1 Brief Introduction to Spin-Glasses .................................. 273
   13.2 Glassy Behavior in Manganites ..................................... 277
      13.2.1 Long Relaxation Times ....................................... 277
      13.2.2 Phase Separation at $x = 0.5$ LCMO .......................... 278
      13.2.3 Manganites: Canonical Glasses or a New Glassy State? ........ 280
   13.3 Phase Separation, Time-Dependent Effects,
      and Glassy Behavior in the CMR Manganites
            by P. Schiffer .................................................. 281

14. Inhomogeneities in La$_{1-x}$Sr$_x$MnO$_3$
   and Pr$_{1-x}$Ca$_x$MnO$_3$ ............................................. 287
   14.1 Results for La$_{1-x}$Sr$_x$MnO$_3$ ................................ 287
14.1.1 Low Hole Density .......................... 287
14.1.2 Density $x \approx 1/8$ .......................... 289
14.1.3 Large Hole Density: Double-Exchange Behavior? .......................... 290
14.1.4 Inhomogeneities in Sr-Based Manganites at $x = 0.5$ .......................... 291
14.2 Results for Pr$_{1-x}$Ca$_x$MnO$_3$ .......................... 292

15. Inhomogeneities in Layered Manganites .......................... 295
  15.1 Mixed-Phase Tendencies in Bilayers .......................... 295
  15.1.1 Inhomogeneities at $x = 0.50$ .......................... 295
  15.1.2 Inhomogeneities at $x = 0.40$ .......................... 296
  15.1.3 Inhomogeneities at $x \sim 0.30$ .......................... 298
  15.1.4 Study of (La$_{1-x}$Nd$_x$)$_{2-2z}$Sr$_{1+2z}$Mn$_2$O$_7$ .......................... 299
  15.2 Inhomogeneities in Single Layers .......................... 300

16. An Elementary Introduction to Percolation .......................... 303
  16.1 Basic Considerations .......................... 303
  16.2 Resistor Networks .......................... 305
  16.3 Anderson Localization .......................... 308
  16.4 Quantum Percolation .......................... 309
  16.5 Appendix: Solution of the Random-Resistor-Network Equations .......... 311

17. Competition of Phases as the Origin of the CMR .......................... 313
  17.1 Quenched Disorder Influence on First-Order Transitions
      and Mesoscopic Coexisting Clusters .......................... 313
  17.2 Random Field Ising and Heisenberg Models .......................... 316
  17.3 Effective Resistor Network Approximation .......................... 320
  17.3.1 First-Order Percolation Transitions .......................... 325
  17.3.2 Calculation of Conductances in Quantum Problems .......... 325
  17.3.3 The Difficult Task of Calculating Resistivities .......... 327
  17.4 Strain and Long-Range Coulombic Effects .......................... 328
  17.5 Competition Between Ordered States
      Leading to "Quantum-Critical"-Like Behavior .......................... 329
  17.5.1 A Toy Model of Competing Phases .......................... 329
  17.5.2 Estimating Resistances in Mixed-Phase Manganites .......... 333
  17.5.3 Huge MR in the Presence of Small Magnetic Fields .......... 334
  17.5.4 Prediction of a New High-Temperature Scale $T^*$ .......... 336
  17.6 Experimental Phase Diagrams
      in the FM CO Region of Competition .......................... 337
  17.7 Control of Quenched Disorder in Manganites
      by Y. Tokura .......................... 340
  17.8 More on the Influence of Disorder on $T_C$ .......................... 343
  17.9 Transition From Charge-Ordered
      to Ferromagnetic Metallic States and Giant Isotope Effect
      by D.I. Khomskii .......................... 344
XIV    Contents

18. Pseudogaps and Photoemission Experiments................. 349
   18.1 Brief Introduction to Photoemission Experiments......... 349
   18.2 Pseudogap in Manganites: Experimental Investigations..... 354
   18.3 Pseudogap in Manganites: Theoretical Investigations..... 356
   18.4 Properties of One Hole ................................ 359

19. Charge-Ordered Nanoclusters above TC:
    the Smoking Gun of Phase Separation? ..................... 361
   19.1 Introduction and Relevance of Results
       Discussed in this Chapter ............................... 361
   19.2 Diffuse Scattering and Butterfly-Shaped Patterns ....... 362
       19.2.1 Bilayers ........................................ 362
       19.2.2 Perovskites ..................................... 363
   19.3 CE-type Clusters above TC .............................. 365
       19.3.1 Neutron Scattering Applied to LCMO x = 0.3 ......... 365
       19.3.2 Size and Internal Structure of Charge-Ordered Clusters 367
       19.3.3 Behavior of Nanoclusters with Magnetic Fields ....... 369
       19.3.4 Electron Diffraction for LCMO x = 0.3 ............... 370
       19.3.5 Neutron Diffraction and Reverse Monte Carlo ....... 370
       19.3.6 The Interesting Case of Sm1−xSr2MnO3 ................ 371
   19.4 A New Temperature Scale T* above TC ................... 372

20. Other Compounds with Large MR
    and/or Competing FM AF Phases ............................ 377
   20.1 Eu-based Compounds ................................... 377
   20.2 Diluted Magnetic Semiconductors ......................... 379
   20.3 Ruthenates .......................................... 380
   20.4 More Materials with Large MR or AF FM Competition .... 381
   20.5 Illuminating Magnetic Cluster Formation
       with Inelastic Light Scattering
       by S.L. Cooper, H. Rho, and C.S. Snow .................. 384
       20.5.1 Introduction ..................................... 384
       20.5.2 Application to Eu-based Semiconductors .......... 388
       20.5.3 Cluster Formation Temperature T* and Percolation  . 391

21. Brief Introduction to Giant Magnetoresistance (GMR) .... 395
   21.1 Giant Magnetoresistance ............................... 395
   21.2 Applications ....................................... 401
       21.2.1 Magnetic Recording ............................... 401
       21.2.2 Nonvolatile Memories ............................ 403
       21.2.3 Magnetic Tunnel Junctions ....................... 403
Nanoscale Phase Separation and Colossal Magnetoresistance
The Physics of Manganites and Related Compounds
Dagotto, E.
