Contents

1 A Follow-up of Pregnancies in Assisted Reproduction: Necessity and Problems
Michael Ludwig .............................................. 1

Why Is It Necessary to Perform a Follow-up of Pregnancies After an ART Procedure? ............. 2
Why Do Not All Centres Perform a Follow-up of Pregnancies After an ART Procedure? ............ 4
Conclusion .................................................. 5

2 Incidence of EarlyAbortions and Ectopic Pregnancies in Assisted Reproduction
Annika K. Schröder, Michael Ludwig ....................................... 7

Introduction ................................................ 7
Definitions .................................................. 7
Incidence of Spontaneous Abortions ................. 8
  IVF .................................................... 8
  GIFT ................................................. 12
  ICSI ............................................... 12
  Frozen/Thawed ET ..................................... 15
  Artificial Insemination with Donor Sperm (AID) 16
Incidence of Ectopic Pregnancies ................... 17
Incidence of Heterotopic Pregnancies ................. 20
Incidence of Disappearing Gestational Sacs ........ 21
Is There a Higher Abortion Risk Following ART? ... 21

3 Incidence of Chromosomal Abnormalities in Abortions After Assisted Reproduction
Annika K. Schröder, Michael Ludwig ................................. 25

Monosomy .............................................. 26
Trisomy ............................................... 27
Triploidy ............................................... 28
Tetraploidy ........................................... 28
Structural Chromosomal Anomalies ................. 29
Mosaics ............................................... 29
Factors that Might Influence the Incidence of Chromosomal Anomalies ........................................ 29
  Effect of Ovarian Stimulation ......................................... 29
  Effect of ICSI .......................................................... 30
  Effect of Parental Age .................................................. 30
Conclusion ................................................................. 31

4 Assisted Reproduction and Prenatal Diagnosis
Pia Wülfing, Michael Ludwig ........................................... 33
Invasive Prenatal Diagnosis .............................................. 33
  IVF and Prenatal Diagnosis ............................................. 33
  ICSI and Prenatal Diagnosis .......................................... 42
Non-invasive Prenatal Diagnosis ...................................... 49
  Ultrasound .............................................................. 50
  Serum Markers for Prenatal Diagnosis ............................... 51
Conclusion ................................................................. 52

5 Obstetric Outcome of Pregnancies After Assisted Reproduction
Georgine Huber, Michael Ludwig ....................................... 55
Singletons Conceived by ART ............................................ 55
Singletons Versus Spontaneously Conceived Pregnancies .......... 55
Singleton Versus Multiple Pregnancies After IVF or IVF/ICSI .......................................................... 59
Multiple Pregnancy After ART Versus
  Spontaneously Conceived Multiple Pregnancies .......... 62
Higher Order Multiple Pregnancies Following ART .......... 64
Obstetric Outcome of Pregnancies After Cryopreservation ........ 64
  Descriptive Studies Without Control Groups ........... 65
  Controlled Studies ...................................................... 65
Conclusion ................................................................. 68

6 Oocyte Donation
Anna Sophie Seelig, Michael Ludwig .................................... 69
Introduction ............................................................... 69
Oocyte Recipients and Donors .......................................... 70
  Hormonal Substitution for Oocyte Recipients .................. 70
  Oocyte Donors .......................................................... 71
  Follow-up of Oocyte Donors ......................................... 72
  Effects of Anonymity and Secrecy ................................. 74
Obstetric Outcome in Oocyte Donation Pregnancies ............... 75
The Impact of Age ......................................................... 79
Conclusion ................................................................. 83
7 Congenital Malformations After ART

Annika K. Schröder, Michael Ludwig .......................... 85
Congenital Malformations After IVF .......................... 86
Congenital Malformations After ICSI .......................... 88
Congenital Malformations After SUZI .......................... 94
Congenital Malformations After GIFT or Intrauterine Insemination .......................... 95
Congenital Malformations After Cryopreservation .......................... 95
An Increased Risk for Certain Malformations ......................... 97
    Neural Tube Defects ........................................ 97
    Alimentary Tract Atresia ..................................... 98
    Hypospadias ................................................. 98
Conclusion ......................................................... 99

8 Perinatal Outcome and Follow-up of Children Born from ART

Georgine Huber, Michael Ludwig .......................... 101
Descriptive Studies Without Control Groups .................. 101
Controlled Studies ............................................. 102
Follow-up of Children From Cryopreserved Embryos ........... 105
Conclusion ......................................................... 106

9 Development of Children of Lesbian Mothers After Using Assisted Reproduction Techniques

Constanze Banz, Michael Ludwig .......................... 107
Development of Children of Lesbian Mothers in General ........ 107
    Gender Identity ............................................ 108
    Gender Role Behaviour ................................... 108
    Sexual Orientation ....................................... 109
    Other Aspects of Personality Development ............... 110
    Children's Social Relationships ......................... 111
Children Conceived Via Donor Insemination by Lesbian Mothers .... 112
Conclusion ......................................................... 115

10 Development of Children and Family Structure After IVF and Gamete Donation

Constanze Banz, Michael Ludwig .......................... 117
Children and Their Parents After IVF .......................... 117
Children and Their Parents After Gamete Donation ............ 121
Conclusion ......................................................... 124
11 General Conclusions
   Michael Ludwig ........................... 127

Abbreviation List ............................. 131
