

Contents

Introduction	1
1. Profinite Groups	3
1.1 Projective Limits of Groups and Rings	3
1.2 Profinite Groups	7
1.3 Subgroups and Quotient Groups	9
1.4 Abelian Profinite Groups, Pontryagin's Duality Theory	10
1.5 Discrete Modules	10
1.6 The Category \mathcal{C}	12
1.7 Inductive Limits in \mathcal{C}	13
2. Galois Theory of Infinite Algebraic Extensions	17
2.1 The Galois Group of Infinite Extensions	17
2.2 The Main Theorem of Galois Theory	19
3. Cohomology of Profinite Groups	21
3.1 Definition of Cohomology Groups	21
3.2 Group Extensions	24
3.3 Dimension Shifting	24
3.4 Shapiro's Lemma	28
3.5 Restriction and Corestriction	28
3.6 The Transfer	29
3.7 Inflation and Transgression	30
3.8 Inductive Limits of Cohomology Groups	35
3.9 Cup Products	37
4. Free pro-p Groups	41
4.1 Construction of Free pro- p Groups	41
4.2 The Magnus Group Algebra	42
4.3 Abelian pro- p Groups	43
4.4 First Characterization of Free pro- p Groups	44
4.5 Second Characterization of Free pro- p Groups	47

5. Cohomological Dimension	49
5.1 Definition of Cohomological Dimension	49
5.2 Euler-Poincaré Characteristic	50
6. Presentation of pro-p Groups	53
6.1 The Generator Rank	53
6.2 Relation Systems	54
7. Group Algebras of pro-p Groups	59
7.1 Complete Group Algebras	59
7.2 Discrete and Compact G -Modules	60
7.3 Pro- p Groups of Dimension ≤ 2	61
7.4 Filtrations	64
7.5 Computing with Commutators and Powers	66
7.6 Group Rings of Free pro- p Groups	68
7.7 The Theorem of Golod-Shafarevich	69
7.8 Relation Structure and Cup Product	72
8. Results from Algebraic Number Theory	77
8.1 Algebraic Number Theory for Infinite Extensions	77
8.2 Normal Extensions	77
8.3 The Frobenius Automorphism	79
8.4 Local and Global Fields	79
8.5 The Multiplicative Group of a Local Field	81
8.6 Finite Class Field Theory	82
8.7 Infinite Class Field Theory	84
8.8 The Principal Ideal Theorem	85
8.9 Cohomology of the Formation Module	87
8.10 Cohomology of the Multiplicative Group	89
8.11 Norm Residue Symbol	90
9. The Maximal p-Extension	93
9.1 Fields of Characteristic p	93
9.2 Fields Containing the p -th Roots of Unity	94
9.3 Fields not Containing the p -th Roots of Unity	96
10. Local Fields of Finite Type	99
10.1 The Case $\chi(\mathfrak{p}) \neq p$	99
10.2 The Case $\chi(\mathfrak{p}) = p, \delta(k) = 0$	101
10.3 The Case $\chi(\mathfrak{p}) = p, \delta(k) = 1$	103
11. Global Fields of Finite Type	111
11.1 The Maximal p -Extension	111
11.2 The Maximal p -Extension with Restricted Ramification	114
11.3 Generator Rank	119

11.4 Explicit Computation of Generators and Relations 122

11.5 The Structure of G_S in Special Cases 129

12. On p -Class Groups and p -Class Field Towers 133

12.1 A Criterion for Class Number Prime to p 133

12.2 The p -Class Field Tower of Cyclic Extensions of Degree p 136

12.3 A Criterion for Infinite Class Field Towers 144

13. The Cohomological Dimension of G_S 149

13.1 Cohomology of S -Unit Groups 149

13.2 The Case $\delta(k) = 1$ 154

13.3 The Case $\delta(k) = 0$ 157
