

Table of Contents

Meshless and Generalized Finite Element Methods: A Survey of Some Major Results	1
<i>I. Babuška, U. Banerjee, J. E. Osborn</i>	
Adaptive Meshfree Method of Backward Characteristics for Nonlinear Transport Equations	21
<i>Jörn Behrens, Armin Iske, Martin Käser</i>	
New Methods for Discontinuity and Crack Modeling in EFG	37
<i>Ted Belytschko, Giulio Ventura, Jingxiao Xu</i>	
SPH Simulations of MHD Shocks Using a Piecewise Constant Smoothing Length Profile	51
<i>Steinar Børve, Marianne Omang, Jan Trulsen</i>	
On the Numerical Solution of Linear Advection-Diffusion Equation using Compactly Supported Radial Basis Functions	63
<i>Ismail Boztosun, Abdellatif Charafi, Dervis Boztosun</i>	
New RBF Collocation Methods and Kernel RBF with Applications	75
<i>Wen Chen</i>	
Tuned Local Regression Estimators for the Numerical Solution of Differential Equations	87
<i>Gary A. Dilts, Aamer Haque, John Wallin</i>	
Approximate Moving Least-Squares Approximation with Compactly Supported Radial Weights	105
<i>Gregory E. Fasshauer</i>	
Coupling Finite Elements and Particles for Adaptivity	117
<i>Sonia Fernández-Méndez, Antonio Huerta</i>	
A Hamiltonian Particle-Mesh Method for the Rotating Shallow-Water Equations	131
<i>Jason Frank, Georg Gottwald, Sebastian Reich</i>	
Fast Multi-Level Meshless Methods Based on the Implicit Use of Radial Basis Functions	143
<i>Csaba Gáspár</i>	
A Particle-Partition of Unity Method—Part IV: Parallelization	161
<i>Michael Griebel, Marc Alexander Schweitzer</i>	

Some Studies of the Reproducing Kernel Particle Method	193
<i>Weimin Han, Xueping Meng</i>	
Consistency by Correcting Coefficients in the Finite-Volume-Particle Method	211
<i>Dietmar Hietel, Rainer Keck</i>	
Do Finite Volume Methods Need a Mesh?	223
<i>Michael Junk</i>	
An Upwind Finite Pointset Method (FPM) for Compressible Euler and Navier-Stokes Equations	239
<i>Jörg Kuhnert</i>	
Adaptive Galerkin Particle Method	251
<i>Hongsheng Lu, Jiun-Shyan Chen</i>	
An Adaptivity Procedure Based on the Gradient of Strain Energy Density and its Application in Meshless Methods	267
<i>Yunhua Luo, Ulrich Häussler-Combe</i>	
New Developments in Smoothed Particle Hydrodynamics	281
<i>Joseph J. Monaghan</i>	
The Distinct Element Method - Application to Structures in Jointed Rock	291
<i>Joseph Morris, Lew Glenn, Stephen Blair</i>	
Advance Diffraction Method as a Tool for Solution of Complex Non-Convex Boundary Problems	307
<i>Boris Muravin, Eli Turkel</i>	
On the Stochastic Weighted Particle Method	319
<i>Endar H. Nugrahani, Sergej Rjasanow</i>	
The SPH/MLSPH Method for the Simulation of High Velocity Concrete Fragmentation	327
<i>Timon Rabczuk, Josef Eibl, Lothar Stempniewski</i>	
Stability of DPD and SPH	339
<i>Philip W. Randles, Albert G. Petschek, Larry D. Libersky, Carl T. Dyka</i>	
A New Meshless Method – Finite-Cover Based Element Free Method . .	359
<i>Rong Tian, Maotian Luan, Qing Yang</i>	
Finite Pointset Method Based on the Projection Method for Simulations of the Incompressible Navier-Stokes Equations	373
<i>Sudarshan Tiwari, Jörg Kuhnert</i>	

LPRH - Local Polynomial Regression Hydrodynamics	389
<i>John F. Wallin, Amer Haque</i>	
On Multigrid Methods for Generalized Finite Element Methods	401
<i>Jinchao Xu, Ludmil T. Zikatanov</i>	
The Convergence of the Finite Mass Method for Flows in Given Force and Velocity Fields	419
<i>Harry Yserentant</i>	
Survey of Multi-Scale Meshfree Particle Methods	441
<i>Lucy T. Zhang, Wing K. Liu, Shao F. Li, Dong Qian, Su Hao</i>	
Appendix. Color Plates	459
