

Contents

1	About This Book	1
2	The Natural History of Leaf-Cutting Ants	5
2.1	The Significance of Social Insects	5
2.2	The Fungus Growers	7
2.3	The Natural History of the Leaf-Cutting Ants of the Genus <i>Atta</i>	9
2.3.1	Colony Foundation in <i>Atta</i>	9
2.3.2	Division of Labor in <i>Atta</i> Colonies	14
2.3.3	The Maintenance of Fungal Hygiene	17
2.3.4	Communication and Foraging in <i>Atta</i> Colonies	20
2.3.5	Leaf-Cutting Behavior and Load-Size Determination	24
2.3.6	Communication Between the Fungus Garden and Workers in <i>Atta</i> Colonies	28
	Color Plates 1–16	31
3	The Study Area – Barro Colorado Island	49
3.1	Location and History	49
3.2	Geology and Soils	51
3.3	Climatic Conditions	51
3.4	Vegetation Structure and Composition	52
3.5	Fauna	53
3.6	Research Locations	54

4	Species Composition of the Forest	55
4.1	Selection and Setup of the Study Plot	55
4.2	Vegetation Inventory	56
4.3	Abundances and Diversity of Tree Species	57
5	Forest Light Regimes	61
5.1	Seasonal and Spatial Light Patterns in the Understory	61
5.1.1	Measuring Irradiance	61
5.1.2	Horizontal Distribution of Irradiance	63
5.1.3	Seasonal Aspects	64
5.2	Vertical Light Variability	66
5.2.1	Measuring Vertical Light Profiles	66
5.2.2	Vertical Distribution of Light	67
6	Canopy Structure of the Forest	71
6.1	Theory	71
6.2	Measuring LAI and Foliage Orientation	72
6.3	Vertical Distribution of Foliage Angles	73
6.4	Spatial and Temporal Characteristics of LAI Distribution	74
6.4.1	Vertical LAI Distribution	74
6.4.2	Horizontal LAI Distribution and Seasonal Variation	77
6.5	LAI Measurements with the Li-Cor LAI-2000	80
6.6	Comparison of the Study Plot with Other Parts of the BCI Forest	81
7	Colony Dynamics	83
7.1	Colony Distribution and Density	84
7.2	Colony Movements	88
7.3	Nest Size	89
7.4	Nest Trees	90
8	Harvest Dynamics	91
8.1	Annual Pattern of Foraging Activity	91
8.1.1	Measuring Foraging Activity	91

Contents		XIII
8.1.2	Plant Biomass Harvest	92
8.2	Size and Weight of Harvested Fragments	99
8.3	Diurnal Course of Foraging Activity	101
8.3.1	The Typical Pattern and Its Variability	101
8.3.2	The Role of Precipitation	104
8.4	Rapid Estimation of Harvesting Rates	105
8.4.1	Estimating Colony Harvest	105
8.4.2	Estimating the Annual Harvest of the <i>Atta colombica</i> Population	107
8.4.3	General Suitability of Linear Regression Models for Estimating Harvest Rates	110
9	The Trail System	111
9.1	Mapping and Monitoring of Foraging Trails	112
9.2	Annual Course of Foraging Trail Establishment	112
9.3	Frequency of Trail Establishment Throughout the Year	115
9.4	Spatial and Temporal Patterns of Foraging	116
9.5	Foraging Activity in the Canopy	117
9.6	Estimating Foraging Area	117
9.7	Trunk Trail Systems as Determinants of Foraging Patterns	119
10	Host Plant Selection	121
10.1	Measuring Electivity	121
10.2	Harvest Preferences of Colony I Throughout the Year	122
10.2.1	Characterization of the Harvested Species	122
10.2.2	Harvest Diversity and Selection	128
11	Herbivory Rates	131
11.1	Factors Affecting Estimates of Herbivory	131
11.2	Herbivory Rates at the Landscape Level	134
11.3	Herbivory at the Colony Level	138
11.3.1	Leaf Harvesting Rates Along Trunk Trail III	138
11.3.2	Defining a Discrete Foraging Area	139
11.3.3	Annual Foliage Loss from the Foraging Area	140
11.4	Herbivory at the Individual Tree Level	143
11.4.1	Methodological Details	143

11.4.2	Estimation of Annual Leaf Harvest from Selected Individual Host Plants	143
11.4.3	Annual Pattern of Leaf Consumption and Herbivory Rates	144
11.5	Comparison of Herbivory at Different Levels	148
12	Herbivory and Light	151
12.1	Effects of Foliage Removal on Light Distribution and Intensity	151
12.1.1	Changes in Understory Light Climate of the Foraging Area	151
12.1.2	Changes in Light Climate of an Individual Tree	153
12.1.3	Simulated Changes in Canopy Light Intensity	155
12.2	Canopy Photosynthesis	157
12.2.1	Simulated Changes in Whole Canopy Photosynthesis	157
12.2.2	Simulated Effects on Photosynthesis of Single Trees	160
12.3	Compensatory Growth	161
13	Seed Dispersal by Leaf-Cutting Ants	165
13.1	Fruit Harvest from the Pioneer Tree <i>Miconia argentea</i> (Melastomataceae)	166
13.2	The Fate of Harvested <i>Miconia</i> Seeds	167
13.3	Ecological Significance of <i>Atta</i> Fruit Harvest	168
14	Nutrient Cycling and Water Relations	171
14.1	Nutrient Cycling	171
14.1.1	Herbivores and Nutrient Cycling	171
14.1.2	Nutrient Concentrations in Harvested Leaves and Refuse	173
14.1.3	Nutrient Dynamics Within the Colony	175
14.1.4	Community Level Effects	177
14.2	Water Relations	179
14.2.1	The Effect of Leaf Wounding	179
14.2.2	Whole-Canopy Level Effects	180
14.2.3	Simulated Effects of Herbivory on Transpiration of Single Trees	181

Contents XV

15 Conclusions: Ecosystem Perspectives 183

15.1 Disturbance, Herbivory, and Biodiversity 184

15.2 Leaf-Cutting Ants and the Spatial
and Temporal Heterogeneity of Resources 187

15.2.1 Light Heterogeneity 188

15.2.2 Nutrient and Soil Heterogeneity 190

15.2.3 Heterogeneity of Water Availability 191

15.3 Leaf-Cutting Ants and Ecosystem Biodiversity 191

Herbivory of Leaf-Cutting Ants

A Case Study on *Atta colombica* in the Tropical
Rainforest of Panama

Wirth, R.; Herz, H.; Ryel, R.J.; Beyschlag, W.; Hölldobler,
B.

2003, XV, 233 p. 76 illus., 8 illus. in color., Hardcover

ISBN: 978-3-540-43896-0
