

Contents

1. What is Nonlinearity?	1
1.1 Dynamical Systems: Linear and Nonlinear Forces	2
1.2 Mathematical Implications of Nonlinearity	5
1.2.1 Linear and Nonlinear Systems	5
1.2.2 Linear Superposition Principle	7
1.3 Working Definition of Nonlinearity	10
1.4 Effects of Nonlinearity	11
2. Linear and Nonlinear Oscillators	17
2.1 Linear Oscillators and Predictability	17
2.1.1 Free Oscillations	18
2.1.2 Damped Oscillations	19
2.1.3 Damped and Forced Oscillations	20
2.2 Damped and Driven Nonlinear Oscillators	21
2.2.1 Free Oscillations	22
2.2.2 Damped Oscillations	23
2.2.3 Forced Oscillations – Primary Resonance and Jump Phenomenon (Hysteresis)	23
2.2.4 Secondary Resonances (Subharmonic and Superharmonic)	26
2.3 Nonlinear Oscillations and Bifurcations	27
Problems	29
3. Qualitative Features	31
3.1 Autonomous and Nonautonomous Systems	32
3.2 Dynamical Systems as Coupled First-Order Differential Equations: Equilibrium Points	34
3.3 Phase Space/Phase Plane and Phase Trajectories: Stability, Attractors and Repellers	36
3.4 Classification of Equilibrium Points: Two-Dimensional Case ..	38
3.4.1 General Criteria for Stability	38
3.4.2 Classification of Equilibrium (Singular) Points	40
3.5 Limit Cycle Motion – Periodic Attractor	50
3.5.1 Poincaré–Bendixson Theorem	52

3.6	Higher Dimensional Systems	54
3.6.1	Example: Lorenz Equations	55
3.7	More Complicated Attractors	58
3.7.1	Torus	59
3.7.2	Quasiperiodic Attractor	62
3.7.3	Poincaré Map	63
3.7.4	Chaotic Attractor	64
3.8	Dissipative and Conservative Systems	65
3.8.1	Hamiltonian Systems	68
3.9	Conclusions	69
	Problems	69
4.	Bifurcations and Onset of Chaos	
	in Dissipative Systems	75
4.1	Some Simple Bifurcations	76
4.1.1	Saddle-Node Bifurcation	77
4.1.2	The Pitchfork Bifurcation	80
4.1.3	Transcritical Bifurcation	83
4.1.4	Hopf Bifurcation	85
4.2	Discrete Dynamical Systems	89
4.2.1	The Logistic Map	90
4.2.2	Equilibrium Points and Their Stability	91
4.2.3	Stability When the First Derivative Equals to +1 or -1	92
4.2.4	Periodic Solutions or Cycles	94
4.2.5	Period Doubling Phenomenon	96
4.2.6	Onset of Chaos: Sensitive Dependence on Initial Conditions – Lyapunov Exponent	98
4.2.7	Bifurcation Diagram	101
4.2.8	Bifurcation Structure in the Interval $3.57 \leq a \leq 4$...	103
4.2.9	Exact Solution at $a = 4$	104
4.2.10	Logistic Map: A Geometric Construction of the Dynamics – Cobweb Diagrams	105
4.3	Strange Attractor in the Hénon Map	107
4.3.1	The Period Doubling Phenomenon	108
4.3.2	Self-Similar Structure	110
4.4	Other Routes to Chaos	111
4.4.1	Quasiperiodic Route to Chaos	111
4.4.2	Intermittency Route to Chaos	113
4.4.3	Type-I Intermittency	114
4.4.4	Standard Bifurcations in Maps	116
	Problems	118

5. Chaos in Dissipative Nonlinear Oscillators and Criteria for Chaos	123
5.1 Bifurcation Scenario in Duffing Oscillator	124
5.1.1 Period Doubling Route to Chaos	126
5.1.2 Intermittency Transition	130
5.1.3 Quasiperiodic Route to Chaos	132
5.1.4 Strange Nonchaotic Attractors (SNAs)	133
5.2 Lorenz Equations	135
5.2.1 Period Doubling Bifurcations and Chaos	136
5.3 Some Other Ubiquitous Chaotic Oscillators	142
5.3.1 Driven van der Pol Oscillator	142
5.3.2 Damped, Driven Pendulum	142
5.3.3 Morse Oscillator	145
5.3.4 Rössler Equations	146
5.4 Necessary Conditions for Occurrence of Chaos	147
5.4.1 Continuous Time Dynamical Systems (Differential Equations)	147
5.4.2 Discrete Time Systems (Maps)	148
5.5 Computational Chaos, Shadowing and All That	151
5.6 Conclusions	153
Problems	153
6. Chaos in Nonlinear Electronic Circuits	159
6.1 Linear and Nonlinear Circuit Elements	159
6.2 Linear Circuits: The Resonant RLC Circuit	161
6.3 Nonlinear Circuits	165
6.3.1 Chua's Diode: Autonomous Case	165
6.3.2 A Simple Practical Implementation of Chua's Diode .	167
6.3.3 Bifurcations and Chaos	167
6.4 Chaotic Dynamics of the Simplest Dissipative Nonautonomous Circuit: Murali–Lakshmanan–Chua (MLC) Circuit	171
6.4.1 Experimental Realization	171
6.4.2 Stability Analysis	172
6.4.3 Explicit Analytical Solutions	173
6.4.4 Experimental and Numerical Studies	174
6.5 Analog Circuit Simulations	178
6.6 Some Other Useful Nonlinear Circuits	181
6.6.1 RL Diode Circuit	181
6.6.2 Hunt's Nonlinear Oscillator	182
6.6.3 p-n Junction Diode Oscillator	182
6.6.4 Modified Chua Circuit	182
6.6.5 Colpitt's Oscillator	184
6.7 Nonlinear Circuits as Dynamical Systems	185
Problems	185

7. Chaos in Conservative Systems	191
7.1 Poincaré Cross Section or Surface of Section	192
7.2 Possible Orbits in Conservative Systems	196
7.2.1 Regular Trajectories	197
7.2.2 Irregular Trajectories	201
7.2.3 Canonical Perturbation Theory: Overlapping Resonances and Chaos	202
7.3 Hénon–Heiles System	204
7.3.1 Equilibrium Points	206
7.3.2 Poincaré Surface of Section of the System	207
7.3.3 Numerical Results	208
7.4 Periodically Driven Undamped Duffing Oscillator	213
7.5 The Standard Map	216
7.5.1 Linear Stability and Invariant Curves	217
7.5.2 Numerical Analysis: Regular and Chaotic Motions ...	222
7.6 Kolmogorov–Arnold–Moser Theorem	226
7.7 Conclusions	227
Problems	228
8. Characterization of Regular and Chaotic Motions	235
8.1 Lyapunov Exponents	235
8.2 Numerical Computation of Lyapunov Exponents	238
8.2.1 One-Dimensional Map	238
8.2.2 Computation of Lyapunov Exponents for Continuous Time Dynamical Systems	239
8.3 Power Spectrum	245
8.3.1 The Power Spectrum and Dynamical Motion	245
8.4 Autocorrelation	250
8.5 Dimension	253
8.6 Criteria for Chaotic Motion	255
Problems	258
9. Further Developments in Chaotic Dynamics	259
9.1 Time Series Analysis	260
9.1.1 Estimation of Time-Delay and Embedding Dimension	260
9.1.2 Largest Lyapunov Exponent	261
Problems	261
9.2 Stochastic Resonance	262
Problems	264
9.3 Chaotic Scattering	266
Problems	268
9.4 Controlling of Chaos	269
9.4.1 Controlling and Controlling Algorithms	270

9.4.2	Stabilization of UPO.....	271
Problems	274
9.5	Synchronization of Chaos.....	277
9.5.1	Chaos in the DVP Oscillator	277
9.5.2	Synchronization of Chaos in the DVP Oscillator	278
9.5.3	Chaotic Signal Masking and Transmission of Analog Signals	280
9.5.4	Chaotic Digital Signal Transmission	282
Problems	284
9.6	Quantum Chaos.....	284
9.6.1	Quantum Signatures of Chaos	284
9.6.2	Rydberg Atoms and Quantum Chaos	287
9.6.3	Hydrogen Atom in a Generalized van der Waals Interaction	289
9.6.4	Outlook	291
Problems	293
9.7	Conclusions.....	293
10.	Finite Dimensional Integrable	
	Nonlinear Dynamical Systems	295
10.1	What is Integrability?.....	296
10.2	The Notion of Integrability	297
10.3	Complete Integrability – Complex Analytic Integrability	300
10.3.1	Real Time and Complex Time Behaviours	301
10.3.2	Partial Integrability and Constrained Integrability ...	302
10.3.3	Integrability and Separability	302
10.4	How to Detect Integrability: Painlevé Analysis	305
10.4.1	Classification of Singular Points	306
10.4.2	Historical Development of the Painlevé Approach and Integrability of Ordinary Differential Equations .	307
10.4.3	Painlevé Method of Singular Point Analysis for Ordinary Differential Equations	311
10.5	Painlevé Analysis and Integrability of Two-Coupled Nonlinear Oscillators	317
10.5.1	Quartic Anharmonic Oscillators	317
10.6	Symmetries and Integrability	321
10.6.1	Invariance Conditions, Determination of Infinitesimals and First Integrals of Motion	323
10.6.2	Application – The Hénon–Heiles System.....	326
10.7	A Direct Method of Finding Integrals of Motion	330
10.8	Integrable Systems with Degrees of Freedom Greater Than Two	331
10.9	Integrable Discrete Systems.....	333

10.10	Integrable Dynamical Systems on Discrete Lattices	335
10.11	Conclusion	336
	Problems	337
11.	Linear and Nonlinear Dispersive Waves	341
11.1	Linear Waves	341
11.2	Linear Nondispersive Wave Propagation	342
11.3	Linear Dispersive Wave Propagation	343
11.4	Fourier Transform and Solution of Initial Value Problem	345
11.5	Wave Packet and Dispersion	348
11.6	Nonlinear Dispersive Systems	350
	11.6.1 An Illustration of the Wave of Permanence	350
	11.6.2 John Scott Russel's Great Wave of Translation	350
11.7	Cnoidal and Solitary Waves	352
	11.7.1 Korteweg–de Vries Equation and the Solitary Waves and Cnoidal Waves	352
11.8	Conclusions	355
	Problems	355
12.	Korteweg–de Vries Equation and Solitons	359
12.1	The Scott Russel Phenomenon and KdV Equation	359
12.2	The Fermi–Pasta–Ulam Numerical Experiments on Anharmonic Lattices	366
	12.2.1 The FPU Lattice	366
	12.2.2 FPU Recurrence Phenomenon	368
12.3	The KdV Equation Again!	369
	12.3.1 Asymptotic Analysis and the KdV Equation	369
12.4	Numerical Experiments of Zabusky and Kruskal: The Birth of Solitons	372
12.5	Hirota's Direct or Bilinearization Method for Soliton Solutions of KdV Equation	375
12.6	Conclusions	380
13.	Basic Soliton Theory of KdV Equation	381
13.1	The Miura Transformation and Linearization of KdV: The Lax Pair	382
	13.1.1 The Miura Transformation	382
	13.1.2 Galilean Invariance and Schrödinger Eigenvalue Problem	383
	13.1.3 Linearization of the KdV Equation	384
	13.1.4 Lax Pair	385
13.2	Lax Pair and the Method of Inverse Scattering: A New Method to Solve the Initial Value Problem	386

13.2.1	The Inverse Scattering Transform (IST) Method for KdV Equation	386
13.3	Explicit Soliton Solutions	390
13.3.1	One-Soliton Solution ($N = 1$)	390
13.3.2	Two-Soliton Solution	392
13.3.3	N -Soliton Solution	393
13.3.4	Soliton Interaction	394
13.3.5	Nonreflectionless Potentials	395
13.4	Hamiltonian Structure of KdV Equation	395
13.4.1	Dynamics of Continuous Systems	396
13.4.2	KdV as a Hamiltonian Dynamical System	398
13.4.3	Complete Integrability of the KdV Equation	399
13.5	Infinite Number of Conserved Densities	402
13.6	Bäcklund Transformations	403
13.7	Conclusions	405
14.	Other Ubiquitous Soliton Equations	407
14.1	Identification of Some Ubiquitous Nonlinear Evolution Equations from Physical Problems	408
14.1.1	The Nonlinear Schrödinger Equation in Optical Fibers	409
