Preface

It has been recognized since the inception of Artificial Intelligence (AI) that abstractions, problem reformulations, and approximations (AR&A) are central to human common-sense reasoning and problem solving and to the ability of systems to reason effectively in complex domains. AR&A techniques have been used to solve a variety of tasks, including automatic programming, constraint satisfaction, design, diagnosis, machine learning, search, planning, reasoning, game playing, scheduling, and theorem proving. The primary purpose of AR&A techniques in such settings is to overcome computational intractability. In addition, AR&A techniques are useful for accelerating learning and for summarizing sets of solutions.

SARA’s aim is to provide a forum for intensive interaction among researchers in all areas of AI with an interest in the different aspects of AR&A techniques. The diverse backgrounds of participants leads to a rich and lively exchange of ideas, and a transfer of techniques and experience between researchers who might otherwise not be aware of each other’s work.

SARA has a tradition of inviting distinguished researchers from diverse areas to give technical keynote talks of a survey nature. SARA 2002 has two keynote speakers from established SARA areas: Sridhar Mahadevan will speak about abstraction and reinforcement learning and Derek Long about reformulation in planning. SARA 2002 also has two keynote speakers from areas that have not been strongly represented at previous SARAs: Bob Kurshan will survey the use of abstraction in model-checking and Aristide Mingozzi will survey state space relaxation and search strategies in dynamic programming.

The papers in this volume are representative of the range of AR&A techniques and their applications. We would like to thank the authors and the keynote speakers for their efforts in preparing high quality technical papers and presentations accessible to a general audience, and thank the program committee and anonymous reviewers for the time and effort they invested to provide constructive feedback to the authors. We are very grateful for the assistance we received in organizing SARA 2002 from Susan Jackson, Sunrose Ko, Yngvi Bjornsson, Rob Lake, and Shirley Mitchell. Judith Chomitz and Tania Seib at the Kananaskis Mountain Lodge were a pleasure to work with. We would like to express a special thanks to Berthe Choueiry for her advice, suggestions, and support.
Several organizations provided financial support or assistance which greatly enhanced the richness of the SARA experience, and for which all SARA 2002 participants owe thanks: the American Association for Artificial Intelligence (AAAI), NASA Ames Research Center, the Pacific Institute for the Mathematical Sciences (PIMS), the University of Alberta, and Georgia Institute of Technology. SARA 2002 is a AAAI affiliate.

Robert C. Holte
Organization

Symposium Co-chairs

Sven Koenig, Georgia Institute of Technology
Robert C. Holte, University of Alberta

Program Committee

Ralph Bergmann, University of Hildesheim
Yngvi Bjornsson, University of Alberta
Craig Boutilier, University of Toronto
Berthe Y. Choueiry, University of Nebraska-Lincoln
Stefan Edelkamp, Albert-Ludwigs-Universität Freiburg
Tom Ellman, Vassar College
Boi V. Faltings, Swiss Federal Institute of Technology in Lausanne
Jeremy Frank, NASA Ames
Eugene C. Freuder, Cork Constraint Computation Centre
Mike Genesereth, Stanford University
Lise Getoor, University of Maryland
Fausto Giunchiglia, University of Trento and ITC-IRST
Henry Kautz, University of Washington
Terran Lane, MIT
Michael Lowry, NASA Ames Research Center
Hiroshi Motoda, Osaka University
Pandurang Nayak, PurpleYogi.com
Doina Precup, McGill University
Peter Revesz, University of Nebraska-Lincoln
Lorenza Saitta, Università del Piemonte Orientale
Bart Selman, Cornell University
Barbara Smith, University of Huddersfield
Marco Valtorta, University of South Carolina at Columbia
Jeffrey Van Baalen, University of Wyoming
Toby Walsh, University of York
Weixiong Zhang, Washington University (St. Louis)
Robert Zimmer, Goldsmiths College, University of London
Jean-Daniel Zucker, Université Pierre & Marie Curie

Steering Committee

Berthe Y. Choueiry, University of Nebraska-Lincoln
Tom Ellman, Vassar College
Mike Genesereth, Stanford University
Fausto Giunchiglia, University of Trento and ITC-IRST
Alon Halevy, University of Washington
Robert Holte, University of Alberta
Sven Koenig, Georgia Institute of Technology
Michael Lowry, NASA Ames Research Center
Pandurang Nayak, PurpleYogi.com  
Jeffrey Van Baalen, University of Wyoming  
Toby Walsh, University of York

Additional Reviewers

Avrim Blum, Carnegie-Mellon University  
Chris Drummond, University of Ottawa  
Michael Kearns, University of Pennsylvania  
James Little, University College, Cork  
Lenny Pitt, University of Illinois at Urbana-Champaign
