## Contents

**Summary** .................................................. XVII

**Introduction** .............................................. 1

1 **Methodological Foundations of Defining Environmental Standards** ................................................. 5

1.1 Environmental Standards and Human Attitudes to Nature ................................................. 5
   1.1.1 Environmental Standards as Cultural Achievements ........................................... 6
   1.1.2 Setting Limit Values as a Rational Process ..................................................... 10
   1.1.3 Pragmatic Consistency and Practical Generalizability ........................................ 14

1.2 Methodological Problems of Establishing Limit Values ...................................................... 18
   1.2.1 The Effect Principle .................................................. 18
   1.2.2 Natural Exposures .................................................. 23
   1.2.3 Combined Effects .................................................. 25

1.3 Environmental Policy ........................................ 28
   1.3.1 The Risk Concept as a Fundamental Concept of Environmental Policy ................. 28
   1.3.2 Principles of Environmental Policy .................................................. 31
   1.3.3 Instruments of Environmental Policy .................................................. 34

1.4 Literature .................................................. 35

2 **Scientific and Medical Foundations** ................................................. 39

2.1 Possible Principles of Interaction between two Noxae, especially with the Involvement of Ionizing Radiation .................................................. 41

2.2 Dose-Response Relationships and Models for Combined Effects ......................................... 41
   2.2.1 Dose-Response Curves and Mechanisms .................................................. 41
   2.2.1.1 Reversible Effect Mechanisms .................................................. 43
   2.2.1.2 Irreversible Mechanisms .................................................. 45
   2.2.1.3 Mutagenic Effects .................................................. 46
   2.2.1.4 Tumours .................................................. 48

2.5 Quantitative Relationships between Mixed Exposures and Effects on Plants

2.5.1 Introduction

2.5.2 Establishing Dose-Response Relationships and Evaluating Guideline Values for Single Components

2.5.2.1 The Relationship between Exposure and Effect

2.5.2.2 The Present Situation Concerning Immissions of Effects

2.5.2.3 Protectected Assets

2.5.2.4 Criteria for the Detection and Assessment of Effects

2.5.2.5 Assessment of the Results regarding their Relevance for Determining Dose-Response Relationships

2.5.2.6 Evaluation of the Guideline Values for Single Components

2.5.3 Prospects for the Appraisal of the Hazard Potential of Mixed Exposures

2.5.3.1 Examples of Combined Effects

2.5.3.2 Models for Dose-Response Relationships in Combined Exposure

2.5.3.3 Filtered-Unfiltered Experiments

2.5.3.4 Possible Interactions

2.5.4 Summary Assessment and Recommendations for Action

2.5.5 Literatur

3 Perception of Technical Risks

3.1 Foreword

3.2 Current Risk Debate

3.3 Risk Perception Models

3.3.1 Semantic Risk Model

3.3.2 Risk as an Early Warning Indicator

3.4 Intuitive Processes of Risk Perception

3.5 The Media as a Source of Information

3.6 Perception of Combined Effects

3.7 Psychosomatic Links

3.8 Duties of Risk Policy

3.9 Conclusions

3.10 Literature
4 The Importance of Economic Factors in Setting Combined Environmental Standards

4.1 Scope

4.2 Cost-effective Environmental Protection with Adequate Information

4.2.1 Adverse Effects

4.2.2 Abatement Costs

4.2.3 Cost-efficient Limit Values

4.3 An Empirical Example

4.4 Choice of Policy Instruments

4.5 Cost-efficient Limit Values under Imperfect Information

4.5.1 Uncertainty in Decision-making

4.5.2 Stochastic Decision Model

4.5.3 Fuzzy Decision Model

4.5.4 Decision Models Subject to Uncertainty

4.6 Conclusions

4.7 Literature

5 Legal Problems of Assessing and Regulating Exposure to Combined Effects of Substances and Radiation

5.1 The Current Legal Situation

5.1.1 Constitutional Duties of Protection

5.1.2 Environment Protection Law

5.1.2.1 General

5.1.2.2 Laws Relating to Environmental Media

5.1.2.3 Chemicals Law

5.1.3 Secondary Legislation

5.1.3.1 General

5.1.3.2 Limits

5.1.3.3 Action Thresholds Giving Rise to Legal Obligations

5.1.3.4 Classification of Mixtures and Preparations

5.1.4 Imputation of Combined Effects

5.1.4.1 Civil Liability Law

5.1.4.2 Welfare Law Pertaining to Occupational Health and Safety

5.1.4.3 Public Law

5.1.5 Lifestyle-based Substance Risk
6 Appraisal and Recommendations ........................................ 387
  6.1 Summary Appraisal .................................................. 387
  6.2 Possible Solutions and Recommendations for Action .......... 393

Glossary ................................................................. 397
