# Table of Contents

## Part I  Complex Structured Condensed Matter

- **Spatial Statistics and Micromechanics of Materials**  
  *Dominique Jeulin*  
  ................................................................. 3

- **Characterising the Morphology of Disordered Materials**  
  *Christoph H. Arns, Mark A. Knackstedt, Klaus R. Mecke*  
  ................................................................. 37

- **Topological Characterization of Porous Media**  
  *Hans-Jörg Vogel*  
  ................................................................. 75

- **Nanotomography: Real-Space Volume Imaging with Scanning Probe Microscopy**  
  *Robert Magerle*  
  ................................................................. 93

- **Bicontinuous Surfaces in Self-assembling Amphiphilic Systems**  
  *Ulrich Schwarz, Gerhard Gompper*  
  ................................................................. 107

- **Morphology of Langmuir Monolayer Phases**  
  *Mathias Lösch and Peter Krüger*  
  ................................................................. 152

- **Spatial Order in Liquid Crystals: Computer Simulations of Systems of Ellipsoids**  
  *Friederike Schmid, Nguyen H. Phuoc*  
  ................................................................. 172

- **Two-Dimensional Fluid Foams at Equilibrium**  
  *François Graner*  
  ................................................................. 187

## Part II  Spatial Statistics and Morphology

- **Morphological Texture Analysis: An Introduction**  
  *Pierre Soille*  
  ................................................................. 215

- **Vector- and Tensor-Valued Descriptors for Spatial Patterns**  
  *Claus Beisbart, Robert Dahlke, Klaus Mecke, Herbert Wagner*  
  ................................................................. 238

- **Computational Topology for Point Data: Betti Numbers of α-Shapes**  
  *Vanessa Robins*  
  ................................................................. 261
