# Contents

**Introduction – The Theory of Orbits**  
from Epicycles to “Chaos” .................................. 1  

**Chapter 1. Dynamics and Dynamical Systems – Quod Satis**  
1. **A. Dynamical Systems and Newtonian Dynamics** ............. 16  
   1.1 Dynamical Systems: Generalities .......................... 16  
   1.2 Classification of Critical Points – Stability ............... 20  
   1.3 The n-Dimensional Oscillator .......................... 26  
   
1. **B. Lagrangian Dynamics** ..................................... 32  
   1.4 Lagrange's Equations ..................................... 32  
   1.5 Ignorable Variables and Integration of Lagrange's Equations ............. 37  
   1.6 Noether’s Theorem ................................... 43  
   1.7 An Application of Noether’s Theorem:  
      The n-Dimensional Oscillator .......................... 50  
   1.8 The Principle of Least Action in Jacobi Form .......... 57  
   
1. **C. Hamiltonian Dynamics and Hamilton–Jacobi Theory** ....... 61  
   1.9 The Canonical Equations .................................. 61  
   1.10 The Integral Invariants – Liouville’s Theorem .......... 65  
   1.11 Poisson Brackets and Poisson’s Theorem –  
      The Generation of New Integrals .......................... 73  
   1.12 Canonical Transformations .................................. 76  
   1.13 Generating Functions –  
      Infinitesimal Canonical Transformations ............. 82  
   1.14 The Extended Phase Space .................................. 85  
   1.15 The Hamilton–Jacobi Equation and the Problem of Separability  
      ......................................................... 90  
   1.16 Action–Angle Variables .................................. 98  
   1.17 Separable Multiperiodic Systems –  
      Uniqueness of the Action–Angle Variables .............. 106  
   1.18 Integrals in Involution –  
      Liouville’s Theorem for Integrable Systems .......... 113  
   1.19 Lax’s Method – The Painlevé Property .......... 117
# Contents

## Chapter 2. The Two-Body Problem

2.1 The Two-Body Problem and Kepler’s Three Laws ........ 125
2.2 The Laplace–Runge–Lenz Vector ........................... 126
2.3 Bertrand’s Theorem and Related Questions ................... 136
2.4 The Position of the Point on the Orbit ....................... 141
2.5 The Elements of the Orbit .................................. 147
2.6 The Problem of Regularization .............................. 156
2.7 Topology of the Two-Body Problem ........................ 162

## Chapter 3. The N-Body Problem

3.1 Equations of Motion and the Existence Theorem .......... 175
3.2 The Integrals of the Motion ................................. 178
3.3 The Singularities .......................................... 184
3.4 Sundman’s Theorem ........................................ 192
3.5 The Evolution of the System for $t \to \infty$ .................. 198
3.6 The Virial Theorem ........................................ 200
3.7 Particular Solutions of the N-Body Problem ................. 209
3.8 Homographic Motions and Central Configurations ......... 216

## Chapter 4. The Three-Body Problem

4.1 The General Three-Body Problem .......................... 237
4.2 Existence of the Solution – Sundman and Levi-Civita Regularization ........ 238
4.3 The Restricted Three-Body Problem ......................... 244
4.4 The Stability of the Equilibrium Solutions .................. 256
4.5 The Delaunay Elements for the Restricted Three-Body Problem ........ 265
4.6 The Regularization of the Restricted Three-Body Problem ... 272
4.7 Extensions and Generalizations of the Restricted Problem .... 279

## Chapter 5. Orbits in Given Potentials

5.1 Introduction ................................................ 301
5.2 Orbits in Spherically Symmetric Potentials ................. 302
5.3 Orbits in Isochronal Potentials ............................. 306
5.4 Elliptical Coordinates and Stäckel’s Theorem ............... 316
5.5 Planar Potentials ........................................... 323
5.6 The Problem of Two Fixed Centres in the Plane ............ 334
5.7 Axially Symmetric Potentials – Motion in the Potential of the Earth ........... 341
5.8 Orbits in Triaxial Potentials ................................ 349
5.9 Configurational Invariants .................................. 352

## Mathematical Appendix

A.1 Spherical Trigonometry .................................... 363
