# Contents

<b>Introduction and Perspectives</b> .....	1
The Theory of Scientific Revolutions .....	2
Interactions Between Politics and Scientific Progress .....	5
The Continuous Progress of Astronomical Techniques .....	8
The Three Streams from Pythagoras, Plato, and Aristotle .....	10
<b>1. Before the Classical Greek Period.</b> .....	15
1.1 A General Overview of a Rapid Evolution .....	15
1.2 Elementary Naked-Eye Astronomy .....	21
1.2.1 The Two Luminaries .....	21
1.2.2 The Solar Cycles .....	22
1.2.3 The Moon's Cycle .....	27
1.2.4 Calendars and Problems .....	29
1.2.5 Philosophers in Egypt and Mesopotamia .....	32
1.2.6 Eclipses .....	32
1.2.7 Early Knowledge of Planets .....	36
1.3 Pre-Socratic Greek Astronomy and Cosmology .....	38
1.3.1 A Few Milestones .....	38
1.3.2 Three Permanent Tendencies .....	40
1.3.3 Thales (of Milet) and his Followers, the Milesians .....	42
1.3.4 Pythagoras and the Pythagorians .....	47
1.3.5 Between Pythagoras and Plato .....	49
<b>2. Classical Greek Astronomy</b> .....	55
2.1 Plato's World .....	55
2.1.1 The Myth of the Cave .....	55
2.1.2 The <i>Timaeus</i> .....	58
2.1.3 The Four Elements .....	59
2.1.4 Space .....	60

2.1.5	Platonic Astronomy .....	63
2.1.6	Concluding our Visit to Plato's Dialogues.....	69
2.2	Plato's Contemporaries: Eudoxus, Callippus .....	70
2.2.1	Eudoxus and his System of Homocentric Spheres.....	70
2.2.2	The Reform of Callippus .....	77
2.2.3	Astronomers at the Time of Aristotle .....	78
2.3	Aristotle's World .....	78
2.3.1	Aristotle's Cosmology of Homocentric Spheres .....	79
2.3.2	Aristotle's Physics .....	81
2.4	The Legacy of Plato and Aristotle.....	83
2.5	The Heliocentric Systems.....	84
2.5.1	Heraclides (from the Pontus) .....	85
2.5.2	Aristarchus (300–250 BC?) .....	86
2.5.3	Seleucus (150–100 BC).....	87
2.5.4	The Provisional End of Heliocentrism .....	88
2.6	Hipparchus and his Successors up to Ptolemy .....	89
2.6.1	Alexandria as an Intellectual Center .....	89
2.6.2	Hipparchus.....	91
2.6.3	From Hipparchus to Ptolemy .....	92
2.6.4	Claudius Ptolemy.....	93
2.7	Eccentric and Epicycle Circles: The Ptolemaic Mechanisms....	94
2.7.1	Solar Motion: The Eccentric System .....	94
2.7.2	Planetary Motion: The Epicycle-Deferent System .....	95
2.7.3	The Equivalence Between the Two Systems for the Sun... ..	96
2.7.4	Equivalence of the Two Systems for Mars, Jupiter, and Saturn .....	97
2.7.5	Was Ptolemy a Precursor of Copernicus? .....	101
2.7.6	Elaboration of the Epicycle-Deferent System.....	103
2.8	The Earth, Sun, Moon, and Planets: Distances and Sizes .....	108
2.8.1	The Phenomena .....	108
2.8.2	The Earth's Radius: A Basic Unit of Length .....	109
2.8.3	The Moon .....	111
2.8.4	The Sun: The Aristarchus Determinations .....	113
2.8.5	The Methodology of Hipparchus .....	116
2.8.6	Planetary Distances .....	121
2.9	The Precession of Equinoxes .....	123
2.9.1	Hipparchus's Discovery .....	123
2.9.2	Ptolemy's Precession of Equinoxes .....	126

<b>3. Ptolemy's Astronomy Questioned</b> .....	129
3.1 The Scientific Genealogy of Ptolemy .....	129
3.1.1 Ptolemy's Physics.....	129
3.1.2 The Pagan Followers of Ptolemy .....	131
3.1.3 John Philopon .....	132
3.1.4 Save the Bible! .....	133
3.2 The Church Fathers.....	133
3.2.1 The So-Called "Dark Ages" .....	133
3.2.2 From Origen to Augustine .....	134
3.2.3 Augustine.....	137
3.2.4 Astrology.....	139
3.2.5 The Debate over Creation and the Meaning of Time.....	140
3.2.6 The Seeds of a Reborn Science .....	141
3.3 The Contribution of the Arabic World to Astronomical Knowledge.....	142
3.3.1 Indian Astronomy .....	142
3.3.2 The Development of the Islamic Knowledge of the Sky ...	143
3.3.3 Alfonso the Tenth and his Time.....	150
3.4 The Western World up to Copernicus .....	155
3.4.1 The Continuing Heliocentric Temptation.....	155
3.4.2 The Era of the Translators .....	165
3.4.3 The Priests and Monks of the Church. The Triangular Battle .....	168
3.4.4 The Progress of Observations .....	179
<b>4. The Period of the Renaissance</b> .....	187
4.1 From 1450 to 1600: An Overview.....	187
4.2 Copernicus and the Determination of Planetary Distances .....	190
4.2.1 The Heliocentric System as a Working Hypothesis .....	191
4.2.2 The Distance Scale in the Planetary System .....	195
4.2.3 The Copernican System Elaborated .....	202
4.3 The Progress of the Observations; Tycho Brahe and the Nature of the Universe.....	208
4.3.1 The Supernova of 1572.....	208
4.3.2 The Comet of 1577.....	210
4.3.3 The Helio-geocentric System of Tycho .....	212
4.4 Kepler and the Death of Circularity .....	212
4.4.1 Planetary Distances.....	214
4.4.2 The Elliptical Motion .....	218

4.4.3	The Elliptical Laws of Motion.....	226
4.4.4	The Distances of Planets to the Sun and Kepler's Third Law.....	227
4.4.5	Kepler's Concepts Regarding Dynamics.....	228
4.4.6	Kepler's Other Studies.....	232
4.5	Galileo, Physicist and Observer.....	233
4.5.1	Pre-Galilean Astronomical Observations.....	234
4.5.2	Galileo in 1610: The Telescope and the Telescopic World.	242
4.5.3	Galileo's Mechanics.....	250
<b>5.</b>	<b>Dynamics Enters Astronomy: From Galileo to Newton.....</b>	<b>253</b>
5.1	Galilean Dynamics.....	253
5.2	Francis Bacon in England.....	255
5.3	The French School: Descartes and his Contemporaries.....	257
5.3.1	Cartesian Mechanics: Huygens and Centrifugal Force....	257
5.3.2	Descartes' Theory of Vortices and Some Reflections on Space and Time.....	259
5.3.3	Objections: Henry More and Space; Isaac Barrow and Time.....	266
5.4	Newton and Universal Gravitation.....	267
5.4.1	The <i>Principia</i> .....	268
5.4.2	Kepler's Law of Equal Areas.....	269
5.4.3	Newton's Law of Gravitation: The Inverse Square of Distance.....	271
5.4.4	The Systematization of Mechanics.....	274
5.4.5	The Refutation of the Cartesian Theory of Vortices.....	277
5.5	The Triumph of Newton.....	278
5.5.1	The Development of Instrumental Astronomy.....	279
5.5.2	The Flattening of the Earth.....	283
5.5.3	The Return of Halley's Comet.....	284
5.5.4	The Aberration of Light.....	285
5.5.5	Annual Stellar Parallaxes.....	286
5.5.6	The Fundamental Distances in the Solar System.....	290
5.5.7	Newton and God.....	294
5.6	Appendix	
	Written in Collaboration with Prof. Daniel Pecker.....	296
5.6.1	Geometrical Preliminaries.....	297
5.6.2	Newton's Text Commented.....	304

<b>6. From Pre-Galilean Astronomy to the Hubble Space Telescope and Beyond ...</b>	
Written in Collaboration with Dr. Simone Dumont.....	309
<b>6.1 Improvements in Techniques and Instruments .....</b>	<b>310</b>
6.1.1 Size and Nature of Instruments (Objectives); Measurements of Time.....	310
6.1.2 Development of Ocular Instruments and Techniques.....	323
6.1.3 Basic Physical Data Specific to Astronomy: Velocity of Light $c$ , Gravitational Constant $G$ , etc.....	327
6.1.4 Aperture of the Spectrum .....	328
6.1.5 The Astrophysics of Particles (Solar Particles, Cosmic Rays, Neutrino Astronomy) .....	329
6.1.6 Mathematical Techniques and Theoretical Tools for Astronomy .....	332
6.2 Important Astronomical Discoveries After Galileo .....	334
6.3 Conceptual Consequences of the Broadening of Horizons from Galileo to Einstein.....	353
6.3.1 Giordano Bruno's Cosmology.....	355
6.3.2 Swedenborg, Emanuel (1688–1772) .....	358
6.3.3 Thomas Wright (1711–1786), Immanuel Kant (1724–1804), Jean Lambert (1728–1777).....	359
6.3.4 Edgar Allan Poe (1809–1849) .....	365
6.3.5 Flammarion, Arrhenius, and the Plurality of Inhabited Worlds.....	367
6.3.6 The Cosmogonic Theories as Limitations to the Cosmological Stream; The Contribution of Poincaré .....	368
6.3.7 Fournier d'Albe, Seeliger, Charlier, and the Hierarchical Structure of the Universe .....	370
<b>6.4 Conclusion .....</b>	<b>372</b>
<b>7. Towards Modern Cosmology .....</b>	<b>373</b>
7.1 Failures and Difficulties of the Newtonian Description.....	373
7.2 Criticisms of Newton's Theory: The Mach Discussion.....	375
7.3 The Ether.....	382
7.3.1 The Nature of Light .....	383
7.3.2 The Wave Theory of Light.....	384
7.3.3 The Problem of Ether. Is it Necessary? .....	387
7.3.4 The Lorentz-Fitzgerald Contraction.....	394
7.3.5 Einstein's Special Theory of Relativity (1905) .....	395

7.3.6	The Ether of Special Relativity .....	407
7.4.	Action at a Distance .....	407
7.5.	Olbers' Paradox .....	408
7.6	The "Significant" Facts of Cosmology and the Subjectivity of their Choice .....	413
7.7	Appendix: Modern Cosmology	
	The Velocity of Light, Composition and Measurement .....	415
7.7.1	The Galilean Composition of Velocities .....	415
7.7.2	The Convection of Light by Matter (or Ether) from Römer to Michelson .....	417
7.7.3	The Lorentz Transformations of Coordinates .....	420
7.7.4	The Cone of Light .....	425
<b>8.</b>	<b>Cosmologies of Today and Tomorrow .....</b>	<b>427</b>
8.1	General Relativity .....	427
8.1.1	The Principle of Invariance .....	427
8.1.2	The Equivalence Principle .....	428
8.1.3	The Einsteinian Cosmological-Local Facts .....	434
8.2	The Cosmological Solutions of General Relativity .....	439
8.2.1	The Cosmological Principles .....	441
8.2.2	The Static Universes; Einstein's Cosmological Constant ..	442
8.2.3	Non-static Universes: The Meaning of the Singularities ..	445
8.3	New Cosmological Facts .....	450
8.3.1	The Redshift of Galaxies; the Hubble Ratio .....	450
8.3.2	The Universal Background Radiation .....	458
8.3.3	The Abundance of Light Elements .....	461
8.3.4	The Inhomogeneous Structure of the Universe .....	462
8.3.5	Alleged Abnormal Redshifts .....	466
8.3.6	The Distribution of Quasars in Space .....	472
8.3.7	Does the Observable Universe Show Traces of Evolution?	474
8.3.8	The Age of Globular Clusters .....	476
8.3.9	Other "Real Cosmological Facts" and "Cosmological Hypotheses" that Are Not Facts .....	478
8.4	The Standard "Big Bang" Cosmology .....	479
8.4.1	The Geometric Evolution of Space-time .....	479
8.4.2	The Hyperdense Hyperhot Big Bang (Standard Model) ..	483
8.5	The "New Big Bang" .....	486
8.5.1	The Need for "Inflationary" Models .....	486
8.5.2	The Grand Unification Associated with Inflation .....	488

---

8.5.3 Superstring Theory .....	492
8.5.4 The Quantum Universe .....	494
8.6 Big Bang or Not Big Bang? Alternative Cosmologies.....	497
8.6.1 The GR Models Where Actual Expansion is Accepted ....	498
8.6.2 Models Without Expansion .....	505
8.6.3 Some Discussions with Possible Cosmological Consequences .....	512
8.7 Conclusions: What Is the Current State of Cosmology? What Experiments Could Be Performed to Improve the Situation? .....	524
8.8 Appendix I: Tensors, Line Elements .....	527
8.8.1 Tensors .....	527
8.8.2 The Metrics.....	528
8.8.3 Equations of General Relativity Cosmology .....	531
8.9 Appendix II: The Particles of Modern Physics .....	532
8.9.1 The Nature of Matter .....	532
8.9.2 The Principles of Symmetry .....	536
8.9.3 Particles: Their Quantum Numbers and their Classification .....	539
8.9.4 Interactions.....	541
<b>9. General Conclusion.....</b>	<b>549</b>
<b>Further Reading.....</b>	<b>555</b>
<b>Figure Acknowledgements .....</b>	<b>559</b>
<b>Name Index .....</b>	<b>561</b>
<b>Subject Index .....</b>	<b>577</b>

Understanding the Heavens

Thirty Centuries of Astronomical Ideas from Ancient

Thinking to Modern Cosmology

Pecker, J.-C. - Kaufman, S. (Ed.)

2001, XIII, 597 p., Hardcover

ISBN: 978-3-540-63198-9
