## Contents

List of Contributors ........................................................................................................... ix

1 Restructuring Product Development and Production Networks:
   Introduction to the Book ................................................................................................. 1
   Ulrich Jürgens

**The Challenge of Time to Market: Responses by Industries**

2 Shortening Lead Time through Early Problem-solving – A New Round
   of Capability-building Competition in the Auto Industry ........................................ 23
   Takahiro Fujimoto

3 The Machine Tool Industry: New Market Challenges and the Crisis of
   the Traditional German Pattern of Innovation .......................................................... 55
   Hartmut Hirsch-Kreinsen

4 Turnkey Production Networks: The Organizational Delinking of
   Production from Innovation ......................................................................................... 67
   Timothy J. Sturgeon

5 Making Large Teams Work Like Small Teams: Product Development
   at Microsoft .................................................................................................................. 85
   Michael A. Cusumano

**Comparing National-specific Approaches in the Machine Tool, Automobile and PC Industries**

6 Communication and Cooperation in the New Product and Process
   Development Networks – an International Comparison of Country- and Industry-specific Patterns ........................................................................................................... 107
   Ulrich Jürgens

7 Reorganizing Process Chains in the German and American Machine
   Tool Industry .................................................................................................................. 149
   Inge Lippert

8 The Italian Machine Tool Industry Towards Product Development
   Networks ......................................................................................................................... 181
   Secondo Rolfo
Contents

   Masato Kobayashi

10 Reorganizing the Product and Process Development of an Italian Car Manufacturer ................................................................. 225
   Giuseppe Calabrese

11 Toward New Product and Process Development Networks: The Case of the German Car Industry ........................................... 259
   Ulrich Jürgens

12 Involving Manufacturing Employees in the Early Stages of Product Development: A Case Study from the U.S. Automobile Industry ........ 289
   Carol J. Haddad

13 The New Product Development System of the Japanese Automobile Industry ................................................................. 313
   Masayoshi Ikeda

14 Reduction of Development Lead Time Through Improvements in the Development Process and Innovations in Production Technology – Reconfirmation of Japanese-Style Supplier Relations. Evidence from a Case Study ......................................................... 341
   Shoichiro Sei

15 Industry Hegemony and Company Product Development Performance in the Personal Computer Industry .................................... 357
   Helmut Drüke

Potential and Use of Information and Communication Technology

16 Information and Communication Technologies to Support Cooperation in the Product Development Process .................................. 389
   Oliver Tegel

17 CAD/CAM Utilization Patterns in Japan and Germany ........................................... 407
   Hiroyuki Okamuro

Beyond the Management and Engineering Perspective

18 Knowledge Management is the Key Prerequisite for the Improvement of New Product and Process Development ........................................... 427
   Veronika Lullies
Contents

19 Creating Systemic Capability for Consistent High Performance New Product Development ................................................................. 441

Edward F. McDonough III and Abbie Griffin

20 General Conclusion .................................................................................. 459

Ulrich Jürgens

Index ................................................................................................................. 465
New Product Development and Production Networks
Global Industrial Experience
Jürgens, U. (Ed.)
2000, X, 472 p., Hardcover
ISBN: 978-3-540-64172-8
