## Introduction

---

<b>Part I. Geodesic Metric Spaces</b>	1
<hr/>	
<b>1. Basic Concepts</b>	2
Metric Spaces	2
Geodesics	4
Angles	8
The Length of a Curve	12
<b>2. The Model Spaces <math>M_\kappa^n</math></b>	15
Euclidean $n$ -Space $\mathbb{E}^n$	15
The $n$ -Sphere $\mathbb{S}^n$	16
Hyperbolic $n$ -Space $\mathbb{H}^n$	18
The Model Spaces $M_\kappa^n$	23
Alexandrov's Lemma	24
The Isometry Groups $\text{Isom}(M_\kappa^n)$	26
Approximate Midpoints	30
<b>3. Length Spaces</b>	32
Length Metrics	32
The Hopf-Rinow Theorem	35
Riemannian Manifolds as Metric Spaces	39
Length Metrics on Covering Spaces	42
Manifolds of Constant Curvature	45
<b>4. Normed Spaces</b>	47
Hilbert Spaces	47
Isometries of Normed Spaces	51
$\ell^p$ Spaces	53
<b>5. Some Basic Constructions</b>	56
Products	56
$\kappa$ -Cones	59

Spherical Joins .....	63
Quotient Metrics and Gluing .....	64
Limits of Metric Spaces .....	70
Ultralimits and Asymptotic Cones .....	77
<b>6. More on the Geometry of <math>M_\kappa^n</math></b> .....	<b>81</b>
The Klein Model for $\mathbb{H}^n$ .....	81
The Möbius Group .....	84
The Poincaré Ball Model for $\mathbb{H}^n$ .....	86
The Poincaré Half-Space Model for $\mathbb{H}^n$ .....	90
Isometries of $\mathbb{H}^2$ .....	91
$M_\kappa^n$ as a Riemannian Manifold .....	92
<b>7. <math>M_\kappa</math>-Polyhedral Complexes</b> .....	<b>97</b>
Metric Simplicial Complexes .....	97
Geometric Links and Cone Neighbourhoods .....	102
The Existence of Geodesics .....	105
The Main Argument .....	108
Cubical Complexes .....	111
$M_\kappa$ -Polyhedral Complexes .....	112
Barycentric Subdivision .....	115
More on the Geometry of Geodesics .....	118
Alternative Hypotheses .....	122
<i>Appendix:</i> Metrizing Abstract Simplicial Complexes .....	123
<b>8. Group Actions and Quasi-Isometries</b> .....	<b>131</b>
Group Actions on Metric Spaces .....	131
Presenting Groups of Homeomorphisms .....	134
Quasi-Isometries .....	138
Some Invariants of Quasi-Isometry .....	142
The Ends of a Space .....	144
Growth and Rigidity .....	148
Quasi-Isometries of the Model Spaces .....	150
Approximation by Metric Graphs .....	152
<i>Appendix:</i> Combinatorial 2-Complexes .....	153

---

**Part II. CAT( $\kappa$ ) Spaces** 157

---

<b>1. Definitions and Characterizations of CAT(<math>\kappa</math>) Spaces</b> .....	<b>158</b>
The CAT( $\kappa$ ) Inequality .....	158
Characterizations of CAT( $\kappa$ ) Spaces .....	161
CAT( $\kappa$ ) Implies CAT( $\kappa'$ ) if $\kappa \leq \kappa'$ .....	165
Simple Examples of CAT( $\kappa$ ) Spaces .....	167

Historical Remarks .....	168
<i>Appendix: The Curvature of Riemannian Manifolds</i> .....	169
<b>2. Convexity and Its Consequences</b> .....	175
Convexity of the Metric .....	175
Convex Subspaces and Projection .....	176
The Centre of a Bounded Set .....	178
Flat Subspaces .....	180
<b>3. Angles, Limits, Cones and Joins</b> .....	184
Angles in $\text{CAT}(\kappa)$ Spaces .....	184
4-Point Limits of $\text{CAT}(\kappa)$ Spaces .....	186
Cones and Spherical Joins .....	188
The Space of Directions .....	190
<b>4. The Cartan-Hadamard Theorem</b> .....	193
Local-to-Global .....	193
An Exponential Map .....	196
Alexandrov's Patchwork .....	199
Local Isometries and $\pi_1$ -Injectivity .....	200
Injectivity Radius and Systole .....	202
<b>5. <math>M_\kappa</math>-Polyhedral Complexes of Bounded Curvature</b> .....	205
Characterizations of Curvature $\leq \kappa$ .....	206
Extending Geodesics .....	207
Flag Complexes .....	210
Constructions with Cubical Complexes .....	212
Two-Dimensional Complexes .....	215
Subcomplexes and Subgroups in Dimension 2 .....	216
Knot and Link Groups .....	220
From Group Presentations to Negatively Curved 2-Complexes .....	224
<b>6. Isometries of <math>\text{CAT}(0)</math> Spaces</b> .....	228
Individual Isometries .....	228
On the General Structure of Groups of Isometries .....	233
Clifford Translations and the Euclidean de Rham Factor .....	235
The Group of Isometries of a Compact Metric Space of Non-Positive Curvature .....	237
A Splitting Theorem .....	239
<b>7. The Flat Torus Theorem</b> .....	244
The Flat Torus Theorem .....	244
Cocompact Actions and the Solvable Subgroup Theorem .....	247
Proper Actions That Are Not Cocompact .....	250
Actions That Are Not Proper .....	254
Some Applications to Topology .....	254

<b>8. The Boundary at Infinity of a CAT(0) Space</b>	260
Asymptotic Rays and the Boundary $\partial X$	260
The Cone Topology on $\bar{X} = X \cup \partial X$	263
Horofunctions and Busemann Functions	267
Characterizations of Horofunctions	271
Parabolic Isometries	274
<b>9. The Tits Metric and Visibility Spaces</b>	277
Angles in $\bar{X}$	278
The Angular Metric	279
The Boundary $(\partial X, \angle)$ is a CAT(1) Space	285
The Tits Metric	289
How the Tits Metric Determines Splittings	291
Visibility Spaces	294
<b>10. Symmetric Spaces</b>	299
Real, Complex and Quaternionic Hyperbolic $n$ -Spaces	300
The Curvature of $\mathbb{K}H^n$	304
The Curvature of Distinguished Subspaces of $\mathbb{K}H^n$	306
The Group of Isometries of $\mathbb{K}H^n$	307
The Boundary at Infinity and Horospheres in $\mathbb{K}H^n$	309
Horocyclic Coordinates and Parabolic Subgroups for $\mathbb{K}H^n$	311
The Symmetric Space $P(n, \mathbb{R})$	314
$P(n, \mathbb{R})$ as a Riemannian Manifold	314
The Exponential Map $\exp: M(n, \mathbb{R}) \rightarrow GL(n, \mathbb{R})$	316
$P(n, \mathbb{R})$ is a CAT(0) Space	318
Flats, Regular Geodesics and Weyl Chambers	320
The Iwasawa Decomposition of $GL(n, \mathbb{R})$	323
The Irreducible Symmetric space $P(n, \mathbb{R})_1$	324
Reductive Subgroups of $GL(n, \mathbb{R})$	327
Semi-Simple Isometries	331
Parabolic Subgroups and Horospherical Decompositions of $P(n, \mathbb{R})$	332
The Tits Boundary of $P(n, \mathbb{R})_1$ is a Spherical Building	337
$\partial_T P(n, \mathbb{R})$ in the Language of Flags and Frames	340
<i>Appendix: Spherical and Euclidean Buildings</i>	342
<b>11. Gluing Constructions</b>	347
Gluing CAT( $\kappa$ ) Spaces Along Convex Subspaces	347
Gluing Using Local Isometries	350
Equivariant Gluing	355
Gluing Along Subspaces that are not Locally Convex	359
Truncated Hyperbolic Spaces	362
<b>12. Simple Complexes of Groups</b>	367
Stratified Spaces	368

Group Actions with a Strict Fundamental Domain .....	372
Simple Complexes of Groups: Definition and Examples .....	375
The Basic Construction .....	381
Local Development and Curvature .....	387
Constructions Using Coxeter Groups .....	391
<hr/>	
<b>Part III. Aspects of the Geometry of Group Actions</b> .....	397
<hr/>	
<b>H. <math>\delta</math>-Hyperbolic Spaces</b> .....	398
<b>1. Hyperbolic Metric Spaces</b> .....	399
The Slim Triangles Condition .....	399
Quasi-Geodesics in Hyperbolic Spaces .....	400
$k$ -Local Geodesics .....	405
Reformulations of the Hyperbolicity Condition .....	407
<b>2. Area and Isoperimetric Inequalities</b> .....	414
A Coarse Notion of Area .....	414
The Linear Isoperimetric Inequality and Hyperbolicity .....	417
Sub-Quadratic Implies Linear .....	422
More Refined Notions of Area .....	425
<b>3. The Gromov Boundary of a <math>\delta</math>-Hyperbolic Space</b> .....	427
The Boundary $\partial X$ as a Set of Rays .....	427
The Topology on $X \cup \partial X$ .....	429
Metrizing $\partial X$ .....	432
<b>I. Non-Positive Curvature and Group Theory</b> .....	438
<b>1. Isometries of CAT(0) Spaces</b> .....	439
A Summary of What We Already Know .....	439
Decision Problems for Groups of Isometries .....	440
The Word Problem .....	442
The Conjugacy Problem .....	445
<b>2. Hyperbolic Groups and Their Algorithmic Properties</b> .....	448
Hyperbolic Groups .....	448
Dehn's Algorithm .....	449
The Conjugacy Problem .....	451
Cone Types and Growth .....	455
<b>3. Further Properties of Hyperbolic Groups</b> .....	459
Finite Subgroups .....	459
Quasiconvexity and Centralizers .....	460
Translation Lengths .....	464
Free Subgroups .....	467
The Rips Complex .....	468

<b>4. Semihyperbolic Groups</b> .....	471
Definitions .....	471
Basic Properties of Semihyperbolic Groups .....	473
Subgroups of Semihyperbolic Groups .....	475
<b>5. Subgroups of Cocompact Groups of Isometries</b> .....	481
Finiteness Properties .....	481
The Word, Conjugacy and Membership Problems .....	487
Isomorphism Problems .....	491
Distinguishing Among Non-Positively Curved Manifolds .....	494
<b>6. Amalgamating Groups of Isometries</b> .....	496
Amalgamated Free Products and HNN Extensions .....	497
Amalgamating Along Abelian Subgroups .....	500
Amalgamating Along Free Subgroups .....	503
Subgroup Distortion and the Dehn Functions of Doubles .....	506
<b>7. Finite-Sheeted Coverings and Residual Finiteness</b> .....	511
Residual Finiteness .....	511
Groups Without Finite Quotients .....	514
<b>C. Complexes of Groups</b> .....	519
<b>1. Small Categories Without Loops (Scwols)</b> .....	520
Scwols and Their Geometric Realizations .....	521
The Fundamental Group and Coverings .....	526
Group Actions on Scwols .....	528
The Local Structure of Scwols .....	531
<b>2. Complexes of Groups</b> .....	534
Basic Definitions .....	535
Developability .....	538
The Basic Construction .....	542
<b>3. The Fundamental Group of a Complex of Groups</b> .....	546
The Universal Group $FG(\mathcal{Y})$ .....	546
The Fundamental Group $\pi_1(G(\mathcal{Y}), \sigma_0)$ .....	548
A Presentation of $\pi_1(G(\mathcal{Y}), \sigma_0)$ .....	549
The Universal Covering of a Developable Complex of Groups .....	553
<b>4. Local Developments of a Complex of Groups</b> .....	555
The Local Structure of the Geometric Realization .....	555
The Geometric Realization of the Local Development .....	557
Local Development and Curvature .....	562
The Local Development as a Scwol .....	564
<b>5. Coverings of Complexes of Groups</b> .....	566
Definitions .....	566

The Fibres of a Covering .....	568
The Monodromy .....	572
<b>A Appendix: Fundamental Groups and Coverings of Small Categories .....</b>	<b>573</b>
Basic Definitions .....	574
The Fundamental Group .....	576
Covering of a Category .....	579
The Relationship with Coverings of Complexes of Groups .....	583
<b><math>\mathcal{G}</math>. Groupoids of local isometries .....</b>	<b>584</b>
<b>1. Orbifolds .....</b>	<b>585</b>
Basic Definitions .....	585
Coverings of Orbifolds .....	589
Orbifolds with Geometric Structures .....	591
<b>2. Étale Groupoids, Homomorphisms and Equivalences .....</b>	<b>594</b>
Étale Groupoids .....	594
Equivalences and Developability .....	597
Groupoids of Local Isometries .....	601
Statement of the Main Theorem .....	603
<b>3. The Fundamental Group and Coverings of Étale Groupoids .....</b>	<b>604</b>
Equivalence and Homotopy of $\mathcal{G}$ -Paths .....	604
The Fundamental Group $\pi_1((\mathcal{G}, X), x_0)$ .....	607
Coverings .....	609
<b>4. Proof of the Main Theorem .....</b>	<b>613</b>
Outline of the Proof .....	613
$\mathcal{G}$ -Geodesics .....	614
The Space $\hat{X}$ of $\mathcal{G}$ -Geodesics Issuing from a Base Point .....	616
The Space $\tilde{X} = \hat{X}/\mathcal{G}$ .....	617
The Covering $p : \tilde{X} \rightarrow X$ .....	618
<b>References .....</b>	<b>620</b>
<b>Index .....</b>	<b>637</b>
