

Contents

Part I The Fokker-Planck Equation

1. Dynamical Systems Perturbed by Noise: the Langevin Equation	3
1.1 Stochastic Processes and the Effect of Small Noise	3
1.2 The Itô Calculus	7
1.3 Small Noise Expansion of the Langevin Equation	10
1.4 Simulation of the Stochastic Process	12
1.5 Exercises	13
2. The Fokker-Planck Equation: First Exit from a Domain	18
2.1 The Forward and the Backward Equation	18
2.2 The Exit Probability and the Expected Exit Time	23
2.3 Exercises	25
3. The Fokker-Planck Equation: One Dimension	27
3.1 Stationary and Quasi-Stationary Distributions	28
3.2 Exit Time and Exit Probability	32
3.3 Exercises	38

Part II Asymptotic Solution of the Exit Problem

4. Singular Perturbation Analysis of the Differential Equations for the Exit Probability and Exit Time in One Dimension	43
4.1 The Exit Probability	43
4.2 The Expected Exit Time	50
4.3 Vanishing Diffusion and Drift at a Boundary	52
4.4 The Problem of Unlikely Exit Using the WKB-Method	57
4.5 Exercises	70

5. The Fokker-Planck Equation in Several Dimensions: the Asymptotic Exit Problem	73
5.1 Exit by Diffusion Across the Drift	74
5.2 Exit by Diffusion Along the Drift	78
5.3 Exit by Diffusion Against the Drift	80
5.4 Exit from the Domain of Attraction	91
5.5 Exercises	95

Part III Applications

6. Dispersive Groundwater Flow and Pollution	99
6.1 The Boundary Layer for a Symmetric Flow Field	101
6.2 The Boundary Layer for an Arbitrary Flow Field	107
7. Extinction in Systems of Interacting Biological Populations	118
7.1 A Prey-Predator System	118
7.2 The SIR-Model in Stochastic Epidemiology	130
7.3 Extinction of a Population Within a System of Interacting Populations	141
8. Stochastic Oscillation	149
8.1 Equivalent Statistical Linearization	150
8.2 Almost Linear Oscillation and Stochastic Averaging	152
8.3 Stochastic Relaxation Oscillation	156
9. Confidence Domain, Return Time and Control	168
9.1 Confidence Domain	168
9.2 Return Time of a Stochastic System and Its Application in Ecology	171
9.3 Applications in Control Theory	180
10. A Markov Chain Approximation of the Stochastic Dynamical System	184
10.1 Preferent States in a Low Order Spectral Model of the Atmospheric Circulation	184
10.2 Extinction and Recolonization in Population Biology	192

Asymptotic Methods for the Fokker-Planck Equation
and the Exit Problem in Applications

Grasman, J.; Herwaarden, O.A., van

1999, IX, 220 p., Hardcover

ISBN: 978-3-540-64435-4
