

Table of Contents

1. Introduction	1
1.1 Rings as Characteristic Features of Astrophysical Discs	1
1.2 The Planetary Rings as Unique Disc Systems	4
1.3 The Planetary Rings as a Proving Ground for Theorists ...	5
1.4 Historical Journey	6
2. Observational Data	21
2.1 The Saturnian System	21
2.2 The Uranian System	35
2.3 The Jovian System	40
2.4 The Neptunian System	42
2.5 The Solar System	45
2.6 Accretion Discs	46
2.7 Galactic Discs	49
2.8 Comparative Analysis	51
2.8.1 Primary and Secondary Rings	51
2.8.2 Density Distribution in the Systems of the Giant Planets	52
2.8.3 Dissipation in a Disc System	54
2.8.4 Table of the Parameters of Disc Systems	57
3. Celestial Mechanics Minimum	59
3.1 Basic Equations	59
3.2 Solution for a Single Point Particle	62
3.3 Main Perturbing Factors	68
3.3.1 Equations for the Osculating Orbital Elements	68
3.3.2 Satellite Orbit in the Field of an Aspherical Planet ..	74
3.3.3 Effect of Aerodynamic Friction on the Orbit of a Satellite	76
3.3.4 The Poynting–Robertson Effect	77
3.3.5 Collisions and Particle Orbits	78

4. Elementary Particle Dynamics. I Rigid Body Collisions	81
4.1 Theoretical Models	82
4.1.1 Some Relations from the Theory of the Collisions of Smooth Spheres	82
4.1.2 Break-Up of Ring Particles (Estimates)	84
4.1.3 Model of Collisions Between Particles Covered by Regolith	85
4.1.4 Restitution Coefficient of a Smooth Particle	86
4.2 Experimental Data	87
4.2.1 Comparison Between the Smooth Particle Model and the Experimental Data	87
4.2.2 Restitution Coefficient of Particles Covered by a Regolith Layer	90
5. Elementary Particle Dynamics. II Ring Cosmogony	95
5.1 Tides or Collisions?	95
5.1.1 Discussion of the Traditional Point of View That the Region of the Primary Rings Is the Roche Zone	96
5.1.2 Collisional Break-Up of Particles in Grazing Collisions	98
5.2 Dynamics of Particle Fragments in the Four-Body Problem	100
5.3 Collisional Break-Up of Loose Bodies as the Cause for the Existence of Planetary Rings	109
5.4 Particle Size Distribution	113
6. Elementary Particle Dynamics. III Wave, Photometric, and Other Effects	115
6.1 A Satellite in a Differentially Rotating Disc	115
6.2 Two Large Bodies in a Disc of Small Particles	118
6.3 Wanderer Particles in the Four-Body Problem	120
6.4 Azimuthal Brightness Asymmetry of the Saturnian Rings	122
7. Collective Dynamics of Disc Particles. I Formalism	131
7.1 Transport Theories for Macroparticles	131
7.1.1 The Larmor Theorem for a Particle in a Gravitational Field	134
7.1.2 Derivation of the Moment Equations	135
7.1.3 Integro-differential Equation for the Non-equilibrium Correction to the Distribution Function	137
7.1.4 Evaluation of the Vectorial Non-equilibrium Correction to the Distribution Function. The Heat Flux Vector	140

7.1.5	Evaluation of the Tensor Non-equilibrium Correction to the Distribution Function. The Viscous Stress Tensor	142
7.2	Kinetic Theory of Inelastic Macroparticles	145
8.	Collective Dynamics of Disc Particles.	
	II Stability Analysis	153
8.1	General Dispersion Equation	153
8.1.1	Stability of a Uniformly Rotating Disc	155
8.1.2	A Differentially Rotating Disc of Inelastic Particles ..	159
8.2	Analysis of the Axisymmetric Oscillations of a Disc; Instabilities Causing the Small- and Medium-Scale Structure of the Rings	163
8.2.1	Gravitational Instability	163
8.2.2	Energy (Thermal) Instability	164
8.2.3	Negative Diffusion Instability	165
8.2.4	Analysis of the Dispersion Equation	166
8.2.5	Criteria for the Diffusion and Energy Instabilities for Non-gravitating Smooth Spheres	168
8.2.6	Energy and Diffusion Instabilities in a Model of Gravitating Particles	169
8.3	Analysis of the Axisymmetric Oscillations of a Disc with Non-diffusion Fluxes; Accretion Instability – the Cause of the Large-Scale Structure of the Rings	178
8.4	Analysis of Non-axisymmetric Oscillations of a Disc – Ellipse Instability	184
9.	Resonance Effects in Planetary Rings. I Spiral Waves ...	189
9.1	Density Waves	189
9.1.1	Frequency Multiplication in an Aspherical Field ...	190
9.1.2	Resonance Interaction of a Satellite with Ring Particles (Two-Dimensional Case)	192
9.1.3	Spiral Waves Taking into Account the Self-gravitation and Pressure of the Disc (Two-Dimensional Case)	194
9.2	Bending Waves	196
10.	Resonance Effects in Planetary Rings.	
	II Narrow Ringlets and Satellites	199
10.1	Hypotheses About the Origin of the Uranian Rings	199
10.1.1	The Remarkable Properties of the Uranian Rings ...	199
10.1.2	Hypotheses About the Connection Between the Rings and the Five Known Uranian Satellites ...	200

10.1.3	Hypotheses About Unknown Satellites in the Rings and “Shepherd” Satellites	201
10.1.4	Hypothesis About the Resonance Nature of the Uranian Rings and the Existence of a Series of Undiscovered Satellites Beyond the Boundary of the Rings	201
10.1.5	Calculation of the Orbital Radii of Hypothetical Satellites	202
10.1.6	Detection of New Uranian Satellites	205
10.2	Correlation Between the Uranian Rings and Satellite Resonances	205
10.2.1	Distribution of the Distances Between the Rings and the Resonances	205
10.2.2	Correlation Between the Positions of the Rings and Resonances	207
10.2.3	A Study of the Resonance System of Uranian Rings Using the Correlation Coefficient	209
11.	Formation and Stability of the Uranian Rings	213
11.1	Sequence of the Formation of the Uranian Satellites	216
11.2	Particle Drift in the Uranian Proto-disc	219
11.2.1	Aerodynamic Drift in an Expanding Proto-disc	219
11.2.2	Qualitative Discussion of the Ballistic Drift	222
11.2.3	Estimates of the Ballistic Drift and of the Aerodynamic Friction	226
11.2.4	Numerical Calculation of the Ballistic Drift in the Present System of Rings	230
11.3	Formation of the Uranian Rings in the Inner Lindblad Resonances	233
11.3.1	Elementary Capture Dynamics	234
11.3.2	Numerical Calculation of Particle Capture in Inner Lindblad Resonances	238
11.4	The Present-Day Uranian Ring System	243
11.4.1	Epoch of Free Drift of the Rings and Its Finale with the Participation of Cordelia and Ophelia	243
11.4.2	Contemporary Picture of the Drift Equilibrium in the Rings and the Formation of the 1986U1R or λ Ring	245
11.4.3	Dust Structures in the Rings	247
11.4.4	On the Stability of the Sharp Edge of Non-resonance Elliptical Rings	249
11.4.5	Biographical Information About the Uranian Rings	250
11.5	Conclusions	251

12. Origin, Dynamics, and Stability of the Neptunian Rings	253
12.1 Hypotheses About the Dynamics of the Incomplete Neptunian Rings (Arcs)	253
12.1.1 Dynamical Models of the Neptunian Arcs in the Framework of the “Shepherd” Concept	253
12.1.2 Model of Intrinsically Stable Neptunian Arcs on a Continuous Ring	255
12.1.3 The Voyager-2 Fly-Past near Neptune in August 1989	256
12.1.4 Connection Between Satellite Resonances and the Neptunian Rings	258
12.2 Stability of a Separate Epiton	259
12.2.1 Particle Motion in an Epiton	259
12.2.2 Stability of an Epiton of Inelastic Particles	262
12.2.3 Evolution of an Epiton in Resonance with a Satellite	265
12.3 Formation of Arcs on a Continuous Ring	274
12.3.1 Break-Up of a Ring Under the Action of a Satellite Resonance	274
12.3.2 Interaction Between an Epiton and a Ring	276
12.3.3 Formation of a Stable Chain of Epitons (Arcs)	279
12.3.4 General Scenario for the Origin of the System of Neptunian Arcs	282
13. Self-organisation of the Solar System	285
13.1 Conditions for the Development of Spatial Structures	285
13.1.1 Self-organisation of Open Systems	286
13.1.2 Gravitational Self-organisation	287
13.2 The Law of the Planetary Distances	287
13.2.1 Tendency of the Solar System Towards Self-organisation	287
13.2.2 Dissipative Instability and the Law of the Planetary Distances	290
13.2.3 Proposed Characteristics of the Proto-disc	292
14. Space Studies of the Outer Planets	297
14.1 Space Successes in the Period 1959–1989	297
14.2 The Voyager Missions	301
14.3 The Cassini Mission	303
14.4 The Chronos Mission	305
14.5 The Infrastructure of Planetary Physics	308
Conclusion	313

Appendices

I. The Possibility of Studying the Dynamics of Astrophysical Discs in a Two-Dimensional Approach . . .	315
1. Introduction	315
2. Original Equations for the “Volume” Functions	316
2.1 Initial Dynamic Equations	316
2.2 Equation of State	317
3. Derivation of the Basic Equations for the “Plane” Functions	318
3.1 Order-of-Magnitude Estimates of the Terms in the Initial Equations	318
3.2 The Two Limiting Cases of Astrophysical Discs	321
3.3 Limitations of the Characteristic Times of Processes Studied in the Two-Dimensional Approximation	326
3.4 Closed System of Integro-differential Equations for a Barotropic Disc	328
4. Closed Set of Differential Equations for a Polytopic Disc in an External Gravitational Field	330
4.1 Derivation of the Two-Dimensional Equations	330
4.2 Special Case of the Potential $\Phi_0 = \Phi_0(r)$, $\Phi'_0 = 0$	333
4.3 The Applicability of $C = \text{constant}$	334
5. Closed Set of Differential Equations for a Polytopic Self-gravitating Disc	335
5.1 Derivation of the Two-Dimensional Equations	335
5.2 Why Does the Gradient of the Plane Pressure Not Have the Physical Meaning of a Force?	338
6. Conclusion	339
II. Small-Amplitude Waves in a Disc Which Are Symmetric with Respect to Its $z = 0$-Plane . . .	341
1. Derivation of a Closed Set of Integro-differential Equations	341
2. Derivation of the Dispersion Equation Describing the Three-Dimensional Perturbations	345
3. Solution of the Poisson Equation for a Disc of Half-Thickness h	347
4. Dispersion Relation for Waves in the Plane of the Disc	350
5. The Role of Perturbations Along the Rotation Axis	351
5.1 Condition for Neglecting Mass Transfer Along the Rotation Axis	352
5.1.1 General Case	352
5.1.2 Isothermal Disc	354

5.2	Condition for Neglecting the Inertial Term in the Equation of Motion in the z -Direction – Condition for Neglecting Oscillations Along the Rotation Axis	355
6.	Conclusion	357
III. Derivation of the Linearised Equations for Oscillations of a Viscous Disc		
		359
1.	Derivation of the Linearised Equations for Oscillations of a Viscous Uniformly Rotating Disc	359
2.	Derivation of the Linearised Equations for Oscillations of a Viscous Differentially Rotating Disc of Inelastic Particles with Account of External Matter Fluxes	361
3.	Derivation of the General Dispersion Equation	369
IV. Evaluating the Gravitational Potential Inside and Outside a Triaxial Ellipsoid		
		371
1.	Potential Inside the Ellipsoid	371
2.	Potential Outside the Ellipsoid	375
V. A Drift Mechanism for the Formation of the Cassini Division		
		379
1.	Introduction	379
2.	Statement of the Problem	385
3.	Derivation of the Non-linear Momentum Conservation Equations	388
4.	Time-Averaged Non-linear Momentum Conservation Equations	390
5.	Absence of Averaged Radial Mass Flux in a Dissipationless Disc. Large-Scale Convection	392
6.	Radial Mass Transfer in a Viscous Disc	395
7.	Evolution of the Surface Density of a Disc	400
8.	Conditions for the Formation of Different Types of Resonant Structures: Gaps or Wavetrains?	401
9.	Estimate of the Maximum Width of a Gap Produced by a Density Wave	405
10.	Some Additional Remarks	406
VI. Resonance Structures in Saturn's C Ring		
		409
