Table of Contents

Abbrevations ................................................................. XI

Part 1
Leather and Artificial Leather

1 Leather ................................................................. 3
2 Coating of Textiles ................................................. 11
2.1 Coating of Textiles with PVC Polymers .................. 12
2.2 Coating of Textiles with Polyurethanes ................. 13
2.3 Economic Figures .............................................. 18
3 Definitions ............................................................. 21
4 Water Vapor Permeability ..................................... 24
5 Microporous Products: Comparison of the Structure
    and Properties .................................................. 26

References to Part 1 .................................................... 31

Part 2
Ways To Create Water Vapor Permeability by Elimination
of Solid or Liquid Products

6 Ways To Create Microporosity .................................. 39
7 Elimination of Solid Particles – Especially Leaching of Salts 40
7.1 The Coagulation Process ...................................... 42
7.2 Coagulation of Polyamide and Other Polymers ......... 45
8 Coagulation of Polyurethanes ................................... 46
8.1 Coagulation of Polyurethanes Without Additives ..... 51
8.2 Coagulation of Polyurethanes and Additional Small Sized Solids 52
8.3 Coagulation of Polyurethanes – Addition of Other Polymers 55
8.4 Coagulation of Polyurethanes – Addition of Nonsolvents 56
8.5 Coagulation of Polyurethanes – Addition of Emulsifying
    or Polar Auxiliaries ............................................. 58
8.6 Coagulation of Polyurethanes – Addition of Leachable Solids 59
8.7 Coagulation of Polyurethanes – Addition of Blowing Agents 62
8.8 Coagulation of Polyurethanes by Reacting Prepolymers
    of Polyurethanes ............................................... 62
Part 3
Porosity by Other Means

11 Blowing and Foaming ................................................. 107
11.1 Production of Foams ......................................... 110
11.2 Treatment of Foams ........................................ 113
12 Microporosity by Controlled Melting Processes ................. 115
13 Perforation .............................................................. 118
14 Discontinuous Coatings – e.g. by Printing ...................... 120
15 Flocking ................................................................. 121
16 Crystallization of Homopolymers .................................. 124
16.1 Mixtures of Incompatible Polymers ......................... 125
16.2 Incorporation of Solid Compounds .......................... 126
17 Precipitation of Polymers in Water-Based Dispersions ......... 129
17.1 Bonding of Nonwovens ...................................... 130
18 Hydrophilic Polymers .............................................. 133
18.1 Incorporation of Hydrophilic Materials .................... 136
18.2 Hydrophilic Polyurethanes .................................... 139
18.3 Polyglutamic Acid Containing Compounds .................. 149
18.4 Other Hydrophilic Products of Natural Origin ............. 151
19 Production of Synthetic Suede .................................... 153
20 Leather Board ......................................................... 156
20.1 Regenerated Collagen ........................................ 157
20.2 Coating of Leather ............................................ 159
21 Nonwovens .............................................................. 172
21.1 Special Fibers ...................................................... 180
References to Part 3 ............................................................ 187

Part 4
Treatment of Man-Made Leather

22 Finishing and Dyeing ............................................... 213
23 Modification of Physical Properties by Chemical Methods .... 222
New Materials Permeable to Water Vapor
Träuble, H.
1999, XII, 355 p. 99 illus., Hardcover
ISBN: 978-3-540-64946-5
