Introduction	XV
---------------------------	----

Part I. Differential Equations with Constant Operator Coefficients

1. Power-Exponential Zeros	3
1.1 Introduction	3
1.2 Basics on Operator Pencils	4
1.2.1 Notation	4
1.2.2 Decomposition of the Resolvent Near the Pole	6
1.2.3 Two-Term Quadratic Pencils	7
1.3 Power-Exponential Solutions of the Homogeneous Equation ..	10
1.3.1 Notation. Spaces $Z(A, \lambda_\nu)$ and $Z(A^*, \bar{\lambda}_\nu)$	10
1.3.2 A Biorthogonality Condition	11
1.3.3 Proof of Proposition 1.3.1	14
1.3.4 Two-Term Second Order Equations	14
1.3.5 A Construction of Canonical Systems of Jordan Chains	16
1.4 Power-Exponential Solutions of the Nonhomogeneous Equation	16
1.5 Applications to Elliptic Partial Differential Equations with Constant Coefficients	17
1.5.1 Neumann Problem in a Cylinder	17
1.5.2 The Dirichlet Problem in a Cone	18
1.5.3 Properties of the Operator Pencil (1.44)	19
1.5.4 The Adjoint Pencil	22
1.5.5 The Dirichlet Problem in a Half-Space	22
1.5.6 Elliptic Equations in $\mathbb{R}^n \setminus O$	23
1.6 Comments	25
2. Differential Operator Equations in Weighted Sobolev Spaces	27
2.1 Introduction	27
2.2 The Operator Pencil $A(\lambda)$	27

2.2.1	Conditions on $A(\lambda)$	27
2.2.2	Examples of Peneils Satisfying Conditions I and II ...	29
2.2.3	Notation	30
2.3	Some Spaces of Vector Valued Functions	31
2.3.1	Sobolev Spaces	31
2.3.2	Weighted Sobolev Spaces	32
2.4	Solvability in $W_{\beta}^l(\mathbb{R})$	33
2.5	Application to the Dirichlet Problem in a Cylinder	34
2.6	Green's Kernel	36
2.6.1	Definition of Green's Kernel	36
2.6.2	Properties of $G(t)$	37
2.6.3	Integral Representation of Solutions	38
2.7	Asymptotic Decompositions of Green's Kernel	39
2.7.1	Representations for $G(t)$	39
2.7.2	Representations for $G(t - \tau)$	41
2.8	Asymptotics of Solutions in $W_{\beta}^{\ell}(\mathbb{R})$	43
2.8.1	Asymptotic Representations	43
2.8.2	Solutions of the Homogeneous Equation	44
2.9	A Local Estimate for Solutions	45
2.10	Application to the Dirichlet Problem in a Cone	46
2.11	Comments	48
3.	Solutions in a Local Sobolev Space	49
3.1	Introduction	49
3.2	Zeros of $A(D_t)$	50
3.2.1	Uniqueness for Homogeneous Equation	50
3.2.2	Behaviour of Zeros at Infinity	51
3.3	Unique Solvability of the Nonhomogeneous Equation	52
3.3.1	An Auxiliary Existence Result	52
3.3.2	Unique Solvability	54
3.4	Solutions Corresponding to a Strip	56
3.5	Comparison Principle	56
3.5.1	Comparison Equation and Its Green Function	56
3.5.2	Solvability Criterion for the Comparison Equation ...	58
3.5.3	Comparison Principle	59
3.5.4	A General Asymptotic Representation of the (k_-, k_+) -Solution	60
3.6	Estimates for Solutions on a Semiaxis	63
3.7	The Phragmén-Lindelf Principle	64
3.8	Asymptotics of Solutions Corresponding to a Strip	65
3.8.1	A Representation for the Difference of Two Solutions	65
3.8.2	An Asymptotic Formula	66
3.8.3	Description of Solutions to Homogeneous Equation...	67
3.9	Applications to Boundary Value Problems	68
3.9.1	The Dirichlet Problem in a Cylinder	68

3.9.2	The Neumann Problem in a Cylinder	70
3.9.3	The Dirichlet Problem in a Cone	71
3.10	Comments	74
4.	Two-Weight L_2-Estimates	75
4.1	Introduction	75
4.2	Weighted Sobolev Spaces	76
4.3	Uniqueness of Solutions in $W^\ell(\mathbb{R}; \gamma)$	77
4.4	Existence of Solutions in $W^\ell(\mathbb{R}; \gamma)$	79
4.4.1	Principal Result	79
4.4.2	Auxiliary Results on Operators of Multiple Integration	80
4.4.3	Proof of Theorem 4.4.1	84
4.4.4	Power-Exponential Weight Functions	85
4.5	Application to the Dirichlet Problem in a Cone	85
4.6	Comments	87
<hr/>		
Part II. Differential Equations with Variable Operator Coefficients		
<hr/>		
5.	Existence, Uniqueness and “Pointwise” Estimates	91
5.1	Introduction	91
5.2	Auxiliary Information on the Comparison Equation	93
5.2.1	Green’s Function	93
5.2.2	Existence and Uniqueness Results for the Comparison Equation	96
5.3	Existence	98
5.3.1	Assumptions on the Operator L	98
5.3.2	Construction of a (k_-, k_+) -Solution	99
5.4	Uniqueness Theorems	101
5.4.1	A Class of Uniqueness	101
5.4.2	Another Class of Uniqueness	102
5.4.3	The Case $m_\pm \leq 2$	104
5.4.4	An Explicit Uniqueness Condition in Terms of ω_0 ...	104
5.5	Behaviour of Zeros at Infinity	104
5.5.1	Zeros of L	104
5.5.2	Zeros of the Adjoint Operator	105
5.6	Estimates for Solutions on the Semiaxis $t > t_0$	107
5.7	Applications to Partial Differential Equations with Variable Coefficients	109
5.7.1	The Dirichlet Problem in a Cylinder	109
5.7.2	The Dirichlet Problem in a Cone	110

6. Corollaries of Previous Results	
Under Special Assumptions on $L(t, D_t)$	113
6.1 Introduction	113
6.2 General Perturbations	114
6.2.1 Existence and Uniqueness Theorems	114
6.2.2 Estimates for Solutions at Infinity	116
6.3 The Case $m_+ = m_- = 1$	117
6.3.1 Equation (5.1) on \mathbb{R}	117
6.3.2 Equation (6.8) on a Semiaxis	120
6.4 Estimates of the Phragmén-Lindelf Type for Solutions of (6.8) when ρ Dominates Either t^{-m_+} or t^{-m_-} for Large $t > 0$	121
6.5 Applications to Partial Differential Equations in a Cylinder	124
6.6 Other Applications	126
6.6.1 Isolated Singularities	126
6.6.2 The Neumann Problem in a Cylinder	127
6.6.3 The Dirichlet Problem for Other Nonsmooth Domains	128
6.7 Comments	131
7. Two-Weight L_2-Estimates for Equations with Variable Coefficients	133
7.1 Introduction	133
7.2 Uniqueness Theorems in Weighted Sobolev Spaces	135
7.3 Existence Theorems for Solutions in Weighted Sobolev Spaces and Two-Weight Estimates	136
7.4 Unique Solvability in $W_{\beta_-, \beta_+}^\ell(\mathbb{R})$	138
7.5 The Case $m_\pm = 1$	140
7.6 Two-Weight Estimates when ρ Dominates t^{-m_+}	144
7.7 Comments	146
8. Connection of Solutions Corresponding to Different Strips	147
8.1 Introduction	147
8.2 Auxiliary Information	147
8.2.1 Notation	147
8.2.2 Estimates for Green's Functions of the Comparison Equations	148
8.2.3 An Auxiliary Existence Result	150
8.3 Zeros of $L(t, D_t)$	151
8.3.1 The Class $\mathfrak{X}(L)$	151
8.3.2 The Dimension of $\mathfrak{X}(L)$	152
8.3.3 The Norm in $\mathfrak{X}(L)$	154
8.4 Solutions of (5.1) Corresponding to Different Strips	155
8.4.1 The Auxiliary Dual Space	155
8.4.2 The Subspace $\mathfrak{X}^*(L)$	156

8.4.3	The Difference of Two Solutions Belongs to $\mathfrak{X}(L)$...	157
8.4.4	A Sesquilinear Form and the Dimension of $\mathfrak{X}^*(L)$...	158
8.4.5	Main Result	159
8.5	Structure of Solutions of (6.8) at Infinity	160
8.5.1	The Spaces $Y_1(L)$ and $Y_2(L)$	160
8.5.2	(Y_1, Y_2) -Spaces	161
8.5.3	An Asymptotic Representation	162
8.6	Comments	164
9. Applications to the Case of Perturbations		
	Vanishing at Infinity	165
9.1	Introduction	165
9.2	The Case $\rho(t) \rightarrow 0$ as $t \rightarrow \pm\infty$	166
9.2.1	Description of the Class $\mathfrak{X}(L)$	167
9.2.2	Description of the Class $\mathfrak{X}^*(L)$	167
9.2.3	Characteristic Exponents	168
9.2.4	The Difference of Two Solutions	168
9.3	The Case $\rho(t) \rightarrow 0$ as $t \rightarrow +\infty$	169
9.3.1	Structure of Solutions at $+\infty$	169
9.3.2	Existence of Characteristic Exponents for Solutions of (8.53)	171
9.3.3	Asymptotic Equivalence of Two Equations	172
9.4	The Case of Absence of Generalized Eigenvectors	173
9.4.1	Zeros of L and L^*	173
9.4.2	Relation of Solutions Corresponding to Different Strips	174
9.4.3	An Asymptotic Representation of Solutions at $+\infty$.	174
9.4.4	The Asymptotic Equivalence of Two Equations	177
9.5	Application to the Local Regularity of Solutions to Elliptic Equations	178
9.6	Comments	180
10. Variants and Extensions of the Previous Theory		
10.1	Introduction	181
10.2	Estimates of Solutions to Operator Differential Inequalities .	182
10.3	Perturbation of a Differential Operator with Variable Coefficients	184
10.3.1	General Case	184
10.3.2	A Second Order Differential Operator	185
10.3.3	Perturbations of the Second Order Differential Operator	188
10.4	Applications to Partial Differential Equations	191
10.5	"Parabolic" First Order Operators with a Variable Dissipative Term	194
10.5.1	Unperturbed Operator	194

10.5.2	Perturbed Operator	196
10.6	“Hyperbolic” Operator Equations with Constant Coefficients	200
10.6.1	Assumptions on the Pencil $A(\lambda)$	200
10.6.2	Example of a Second Order Differential Operator ...	201
10.6.3	Solutions in Weighted Sobolev Spaces	202
10.6.4	Comparison Principle and Solvability in $W_{loc}^{\ell-1}(\mathbb{R})$...	205
10.7	“Hyperbolic” Operator Equation with Variable Coefficients .	208
10.8	The Operator L in Variational Form	209
10.8.1	Function Spaces	209
10.8.2	An Equivalent Norm in $W_{\beta}^{-q}(\mathbb{R})$	214
10.8.3	Assumptions on the Pencil $A(\lambda)$	216
10.8.4	Equation with Constant Coefficients	218
10.8.5	Equation with Variable Coefficients	220
10.8.6	The Variational Form of the Dirichlet Problem in a Cone	222
10.9	Ordinary Differential Equations in Banach Spaces	226
10.9.1	Assumptions on the Operator with Constant Coefficients	226
10.9.2	Solvability of the Equation with Constant Coefficients	229
10.9.3	Uniqueness for the Equation with Constant Coefficients	232
10.9.4	Comparison Principle for the Equation with Constant Coefficients	234
10.9.5	Equation with Variable Coefficients	234
10.9.6	Application to the Dirichlet Problem in a Cylinder ..	235
10.10	Applications to Elliptic Boundary Value Problems in a Cone	237
10.10.1	The Comparison Principle for the Model Problem ...	237
10.10.2	The Comparison Principle for the Boundary Value Problem with Variable Coefficients	240

Part III. Asymptotic Theory of Operator Differential Equations

11. Complete Asymptotic Expansions Under Exponential and Power Perturbations of $A(D_t)$	245
11.1 Introduction	245
11.2 Perturbation with Exponential Decay (Homogeneous Equation)	246
11.3 Perturbation with Exponential Decay (Nonhomogeneous Equation)	249
11.4 Perturbation in the Form of Laurent Series (Homogeneous Equation)	251

11.5	Perturbation in the Form of Laurent Series (Nonhomogeneous Equation)	255
11.6	The Dirichlet Problem for a Cuspidal Domain	259
11.7	Comments	262
12.	Reduction to a First Order System	265
12.1	Introduction	265
12.2	Prerequisites for the Subsequent Asymptotic Theory	265
12.3	Linearization of the Pencil $A(\lambda)$	268
12.4	Canonical Sets of Jordan Chains of $I_\ell\lambda + \mathfrak{A}$	271
12.5	The Riesz Projector and Its Properties	273
12.6	The Vector Function Spaces $\mathbb{S}_{\text{loc}}(\mathbb{R})$, $\mathbb{X}_{\text{loc}}(\mathbb{R})$ and $\mathbb{Y}_{\text{loc}}(\mathbb{R})$...	275
12.7	Existence of Solutions in $\mathbb{X}_{\text{loc}}(\mathbb{R})$	277
12.8	Uniqueness of Solutions in $\mathbb{X}_{\text{loc}}(\mathbb{R})$	279
12.9	From the Equation with Variable Coefficients to a First Order System	281
12.10	Comments	283
13.	General Asymptotic Representation	285
13.1	Introduction	285
13.2	Spectral Decomposition of the First Order System	286
13.3	Solvability of the Infinite-Dimensional Part of the Split System	287
13.4	Uniqueness for the Infinite-Dimensional Part of the Split System	290
13.5	The Function α	291
13.6	Reduction of the Split System to a Finite Dimensional System	294
13.7	Estimates for the Operator K and the Function \mathbf{f}	297
13.8	Estimates for the Function β	298
13.9	The Finite Dimensional System in the Matrix Form	302
13.10	Operator Differential Equations on a Semiaxis	305
	13.10.1 Preliminaries	305
	13.10.2 An Existence Result	306
	13.10.3 A Representation for Solutions to (13.92)	307
	13.10.4 The Matrix Form of System (13.95)	308
13.11	Properties of Zeros of the Finite Dimensional System	309
	13.11.1 The System on \mathbb{R}	309
	13.11.2 The System on a Semiaxis	311
13.12	Estimate for a Neumann Series	312
14.	Power-Exponential Asymptotics	317
14.1	Introduction	317
14.2	Special Solutions of the Finite Dimensional System	320
	14.2.1 The Functions α , β , γ and χ	320

14.2.2	Lemma on Special Solutions	321
14.3	Special Solutions of (14.1)	325
14.3.1	Construction of Solutions with Prescribed Asymptotics	325
14.3.2	Main Result	327
14.4	Asymptotics of Arbitrary Solutions of (14.1)	330
14.4.1	Main Result	330
14.4.2	Refinement of the Asymptotics	331
14.5	Nonhomogeneous Finite Dimensional System	334
14.6	A Special Solution of the Nonhomogeneous System (14.2) ...	336
14.7	Asymptotics of Solutions to the Nonhomogeneous System (14.2)	338
14.8	Asymptotics of Solutions in a Weighted Sobolev Space	340
14.9	Asymptotic Behaviour of Solutions to Elliptic Equations near an Interior Point	342
14.10	Comments	344
15.	The Case of One Simple Eigenvalue on the Line	345
15.1	Introduction	345
15.2	A Comparison Principle for Integral Inequalities	346
15.3	Estimate for Solutions of the Scalar Equation (13.108)	347
15.4	Zeros with Prescribed Asymptotics at Infinity	353
15.5	Asymptotics of Solutions of the Homogeneous Higher Order Equation at $+\infty$	356
15.6	Asymptotics of Solutions to the Nonhomogeneous Equation .	361
15.7	Comments	366
16.	Several Simple Eigenvalues on the Line	369
16.1	Introduction	369
16.2	Special Solutions of the Finite Dimensional System	369
16.2.1	Functions α and β	369
16.2.2	Dichotomy Condition	370
16.2.3	Special Solutions of the Finite Dimensional System (16.3)	371
16.2.4	Proof of Lemma 16.2.2	372
16.3	Asymptotic Formulae for Solutions	376
16.4	A Second Order Equation	379
16.5	Application to the Schrdinger Equation in a Cylinder	382
16.6	Comments	383
17.	The Case of a Single Multiple Eigenvalue	385
17.1	Introduction	385
17.2	Solution of an Auxiliary Matrix Equation	386
17.3	Special Solutions of the Finite Dimensional System	390
17.3.1	Prerequisites	390

17.3.2 Lemma on Special Solutions 392

17.4 Asymptotics of Solutions 397

17.5 An Example 399

17.6 Comments 402

A. Holomorphic Operator Functions 403

A.1 Introduction 403

A.2 Prerequisites on Fredholm Operators 404

A.3 Basic Notions of the Spectral Theory
of Holomorphic Operator Functions 405

A.4 Canonical Generating System in $S(F, \lambda_0)$
and Canonical Set of Jordan Chains 407

A.5 The Local Equivalence of Holomorphic Operator Functions . 411

A.6 The Smith Form of a Holomorphic Matrix Function 413

A.7 The Resolvent of a Holomorphic Matrix Function 417

A.8 Fredholm Holomorphic Operator Functions 419

A.9 The Adjoint Holomorphic Operator Function 422

A.10 The Structure of $F(\lambda)^{-1}$ Near the Pole 425
