
Contents

Introduction	1
1 DNA: The Molecule of Life	5
1.1 Introduction	5
1.2 The Structure and Manipulation of DNA	6
1.3 DNA as the Carrier of Genetic Information	7
1.4 Operations on DNA	10
1.5 Summary	21
1.6 Bibliographical Notes	21
2 Theoretical Computer Science: A Primer	23
2.1 Introduction	23
2.2 Algorithms and Automata	25
2.3 The Turing Machine	27
2.4 The Random Access Machine	29
2.5 Data Structures	33
2.6 Computational Complexity	39
2.7 P and NP	43
2.8 Summary	43
2.9 Bibliographical Notes	44
3 Models of Molecular Computation	45
3.1 Introduction	45
3.2 Filtering Models	46
3.3 Splicing Models	60
3.4 Constructive Models	61
3.5 Membrane Models	63
3.6 Summary	69
3.7 Bibliographical Notes	70

4	Complexity Issues	71
4.1	Introduction	71
4.2	An Existing Model of DNA Computation	73
4.3	A Strong Model of DNA Computation	76
4.4	Ogihara and Ray’s Boolean Circuit Model	77
4.4.1	Ogihara and Ray’s Implementation	79
4.5	An Alternative Boolean Circuit Simulation	82
4.6	Proposed Physical Implementation	84
4.7	Analysis	87
4.8	Example Application: Transitive Closure	88
4.9	P-RAM Simulation	90
4.10	The Translation Process	94
4.11	Assessment	100
4.12	A Worked Example: The List Ranking Problem	102
4.13	Summary	106
4.14	Bibliographical Notes	107
5	Physical Implementations	109
5.1	Introduction	109
5.2	Implementation of Basic Logical Elements	109
5.3	Initial Set Construction Within Filtering Models	110
5.4	Adleman’s Implementation	112
5.5	Evaluation of Adleman’s Implementation	115
5.6	Implementation of the Parallel Filtering Model	117
5.7	Advantages of Our Implementation	118
5.8	Experimental Investigations	119
5.9	Other Laboratory Implementations	135
5.9.1	Chess Games	136
5.9.2	Computing on Surfaces	138
5.9.3	Gel-Based Computing	140
5.9.4	Maximal Clique Computation	141
5.9.5	Other Notable Results	143
5.10	Summary	145
5.11	Bibliographical Notes	145
6	Cellular Computing	147
6.1	Introduction	147
6.2	Successful Implementations	150
6.3	Gene Unscrambling in Ciliates	150
6.4	Biological Background	151
6.4.1	IESs and MDSs	151
6.4.2	Scrambled Genes	152
6.4.3	Fundamental Questions	152

6.5	Models of Gene Construction	153
6.6	Summary	155
6.7	Bibliographical Notes	156
