**CONTENTS**

**Introduction and summary of results.** 1  
  0.1 Towards the signature of loop spaces: Elliptic genus 1  
  0.2 Elliptic genera 4  
  0.3 Vertex operator super-algebras 7  
  0.4 $G$-invariant vertex operator super-subalgebras and their  
        vertex operators 9  
  0.5 Classifying spaces of geometric structures on manifolds 13  
  0.6 Elliptic genera as modules over vertex operator super-  
        algebras 16  
  0.7 Infinite dimensional symmetries of elliptic genera for Kähler  
        manifolds 17

**Chapter I. Elliptic genera** 22  
  1.1 Elliptic genera 22  
  1.2 Theta functions and elliptic functions 29  
  1.3 Proof of Theorem 4 of §1.1 32  
  1.4 The modular properties of elliptic genera 35  
  1.5 On the divisibility of coefficients of the elliptic genus $\varphi^R_{\text{ell}}$ 42  
  1.6 Spinors on loop spaces: the Witten genus 46

**Chapter II. Vertex operator super-algebras** 49  
  2.1 Vertex operator super-algebras: A brief introduction 49  
  2.2 The infinite dimensional Clifford modules as vertex oper-  
        ator super-algebras and their modules 60  
  2.3 Clifford algebras, Virasoro algebras and affine Lie algebras  
        as subalgebras of the vertex operator super-algebra $V$ 65  
  2.4 The adjoint operators of vertex operators 72

**Chapter III. $G$-invariant vertex operator super-subalgebras** 93  
  3.1 $V^G$ as vertex operator super-algebra 93  
  3.2 Lie algebras as Lie subalgebras of Clifford algebras 94  
  3.3 Commutants of Lie subalgebras in $\mathfrak{o}(2N)$ and Casimir  
        elements 104  
  3.4 Generating $G$-invariant vectors in $(V)_*$ 111  
  3.5 Vertex operators associated to $G$-invariant vectors of low  
        weight 122  
  3.6 Unitary Virasoro algebras 129  
  3.7 Vertex operators generated by complex volume forms 139
3.8 Symplectic Virasoro algebras 147
3.9 Kähler forms in quaternionic vector spaces 174
3.10 Unitary Virasoro algebras in quaternionic vector spaces 185
3.11 Vertex operators for products of Kähler forms and their commutators 188
3.12 Determination of $G$-invariant vectors of low weight in the vertex operator super-algebra $(V)_*$ 211

Chapter IV. Geometric structures in vector spaces and reductions of structure groups on manifolds 222
4.1 Some geometric structures in vector spaces 222
4.2 Moduli of geometric structures as $G$-orbits in representation spaces: Some examples of interest 236
4.3 A general theory of geometric structures in vector spaces and their compatibilities 250
4.4 On connections and parallelism 268
4.5 Reductions of structure groups on manifolds and parallel sections 285

Chapter V. Infinite dimensional symmetries in elliptic genera for Kähler manifolds 303
5.1 Kählerian manifolds 303
5.2 Generalizations of Riemannian metrics, Riemannian volume forms, Kähler forms, complex volume forms, and quaternion-Kähler forms 313
5.3 Twisted $G$-Dirac operators 326
5.4 Elliptic genera as modules over vertex operator super-algebras of parallel sections 337
5.5 Infinite dimensional symmetries in elliptic genera for Kähler manifolds 357
