## Table of Contents

### Invited Lecture

A Case for Message Oriented Middleware ............................... 1  
  *Guruduth Banavar, Tushar Chandra, Robert Strom, Daniel Sturman*

### Regular Papers

Revisiting the Weakest Failure Detector for Uniform Reliable Broadcast  
(Won the Best Student Paper Award) ................................. 19  
  *Marcos Kawazoe Aguilera, Sam Toueg, Borislav Deianov*

Efficient Algorithms to Implement Unreliable Failure Detectors in Partially Synchronous Systems ................................. 34  
  *Mikel Larrea, Sergio Arevalo, Antonio Fernández*

Solving Consensus Using Chandra-Toueg’s Unreliable Failure Detectors: A General Quorum-Based Approach .......................... 49  
  *Achour Mostéfaoui, Michel Raynal*

A Dynamic Primary Configuration Group Communication Service ........ 64  
  *Roberto De Prisco, Alan Fekete, Nancy Lynch, Alex Shvartsman*

Asynchronous Group Membership with Oracles .......................... 79  
  *Kal Lin, Vassos Hadzilacos*

Generic Broadcast .................................................................... 94  
  *Fernando Pedone, André Schiper*

Non-Blocking Asynchronous Byzantine Quorum Systems ................. 109  
  *Rida A. Bazzi*

Byzantine Agreement Secure Against General Adversaries in the Dual Failure Model .................................................. 123  
  *Bernd Altmann, Matthias Fitzi, Ueli Maurer*

Randomness Recycling in Constant-Round Private Computations ....... 138  
  *Carlo Blundo, Clemente Galdi, Pino Persiano*

Abuse-free Multi-Party Contract Signing ................................... 151  
  *Juan A. Garay, Philip MacKenzie*

Fair and Efficient Mutual Exclusion Algorithms ........................... 166  
  *K. Alagarsamy, K. Vidyasankar*
Fast and Scalable Mutual Exclusion ................................. 180
James H. Anderson, Yong-Jik Kim

The Congenial Talking Philosophers Problem in Computer Networks .... 195
Yuh-Jzer Joung

Software Fault Tolerance of Concurrent Programs Using Controlled
Re-execution ............................................................. 210
Ashis Tarafdar, Vijay K. Garg

DUALITY: An Architecture Independent Design Model for Parallel
Systems Based on Partial Order Semantics .......................... 225
Camelia Zlatea, Tzilla Elrad

A New Rewrite Method for Proving Convergence of Self-Stabilizing
Systems ................................................................. 240
Joffroy Beauquier, Béatrice Bérard, Laurent Fribourg

Stabilization-Preserving Atomicity Refinement ....................... 254
Mikhail Nesterenko, Anish Arora

Self-Testing/Correcting Protocols ..................................... 269
Matthew Franklin, Juan A. Garay, Moti Yung

Randomization Helps to Perform Tasks on Processors Prone to Failures... 284
Bogdan S. Chlebus, Dariusz R. Kowalski

A New Scheduling Algorithm for General Strict Multithreaded
Computations .............................................................. 297
Panagiota Fatourou, Paul Spirakis

Consensus Numbers of Transactional Objects ........................ 312
Eric Ruppert

Linearizability in the Presence of Drifting Clocks and Under Different
Delay Assumptions .......................................................... 327
Maria Eleftheriou, Marios Mavronicolas

Maintenance of a Spanning Tree in Dynamic Networks............... 342
Shay Kutten, Aner Porat

Author Index ............................................................. 357
